"It is not, as you Sir informed the Council at one of the first meetings over which you presided, the intention or wish of Government now to re-open the whole field of discussion on every question relating to the law of landlord and tenant in Bengal; nor is it intended to open the way to a no-rent agitation on the one side, or an agitation for undoing what was done in favour of the tenantry of Bengal by the Act of 1885 on the other.

"The object of this Bill is to make amendments in certain specified sections with a view to giving effect to the intentions of the authors of the Tenancy Act of 1885, in respect of which sections experience has shown that they were so worded as to give room for misunderstanding of their meaning, or in respect of which, though the meaning and intention are clear, yet the agency and procedure provided for giving effect to them have proved by experience to be unsuitable. It is hoped and intended that the discussions on the Bill may be confined to the particular sections which it is proposed to amend.

"I need not occupy the time of the Council with a lengthened narrative of the origin and history of the present Bill. Among the authors of the Tenancy Act Sir Steuart Bayley was one of the chief. While he was Lieutenant-Governor of Bengal, survey and settlement operations were not undertaken on so extensive a scale as they have since been, and no great difficulty was experienced in carrying out provisions of Chapter X of the Tenancy Act. The vaticinations of those who predicted that the Act (the operation of Chapter X especially) would convulse society, lower the value of landed property and set landlord and tenant by the ears were all falsified by events. The value of proprietary rights and of tenants' rights has never been higher, the relations of landlord and tenant have never been more harmonious, and never have there been fewer agrarian riots or disturbances in these provinces than since the Tenancy Act was passed. But when Sir Charles Elliott took charge of the administration of Bengal, difficulties arose and discussions took place between Revenue Officers carrying out settlements of rent and revenue, the Board of Revenue and the Bengal Government, which lasted during the whole period of Sir Charles Elliott's administration. The outcome of these discussions was a Minute by the late Lieutenant Governor, in which he recorded the opinion that the procedure prescribed by Chapter X of the Tenancy Act was too cumbrous, dilatory and expensive to permit of the settlement of rents being carried out under it on a large scale, at a reasonable expenditure of time and money. Sir Charles Elliott, therefore, recommended legislation. At this stage the administration of Bengal was assumed by your Honour, and one of your earliest acts as Lieutenant-Governor was to summon a Conference to Belvedere to consider Sir Charles Elliott's Minute and other documents bearing on the subject of the amendment of the law.

"Both Members of the Board of Revenue, the Revenue Secretaries to the Governments of India and Bengal, the Secretary to the Board of Revenue, the Director of Land Records and some of the Settlement Officers were present at that Conference, and the conclusion almost unanimously agreed to was that Chapter X of the Act and certain other sections required amendment so as to render them more clear and workable. A Minute was subsequently drawn up by Your Honour on the whole subject and a Bill was prepared under your instructions, in which the conclusions come to by the Conference were embodied.

The Bill was submitted to the Government of India and by them to the Secretary of State, who, as well as His Excellency the Governor-General in Council, have accorded their sanction to its introduction in this Council.

"It will thus be seen that this Bill is not the work, and does not represent the views, of any particular individual. It is the result of lengthened discussions, in which various officials and others have taken part, and it represents the mature conclusions to which the Government of India and the Government of Bengal, as a whole, have come after careful consideration.

"I now proceed to explain the changes in the Act proposed to be made by the present Bill, and the reasons for these proposals. They may be divided broadly into three classes, namely, proposals intended—

- (1) to clear up doubts and difficulties of procedure which have arisen in the course of experience in the working of Chapter X of the Bengal Tenancy Act, 1885;
- (2) to facilitate the settlement of rents when undertaken on a large scale, either for the purpose of settling land-revenue or on the application of private individuals;
- (3) to amend the substantive law relating to the enhancement and reduction of rents, so as to make certain provisions of the law workable, and to give effect to the intention of its authors regarding certain points on which, owing to want of sufficient clearness in the wording of the law, or to the interpretations put on it by the Civil Courts, it has been found in practice to be inoperative.

"The principal changes in procedure proposed in Chapter X of the Tenancy Act are these two:—(1) Under the Act revenue officers were intended and empowered to decide all disputes that came before them at any time up to the final publication of the records, in the same way, and following with slight modifications the same procedure, as the Civil Courts, whether such disputes related to possession, right, title, status or any other question that might arise from an entry made or proposed to be made in, or an omission from, the record. Their decisions were to have the force and effect of decrees of the Civil Courts, and were to be subject to appeal only to a Special Judge appointed by Government for the purpose, and from him to the High Court; but it was not intended that the correctness of their orders on any dispute so decided should be liable to be questioned in the ordinary Munsifs' Courts. Now it is proposed that Revenue Officers shall not finally *decide* any questions of the kind, nor are their orders to have the force and effect of decrees of the Civil Courts. When a dispute is raised on any of the classes of questions just mentioned, Revenue Officers will endeavour to ascertain to the best of their ability the true state of things, and after hearing what the parties concerned have to say, they will pass a summary order directing that entry to be made in the record which appears to them to be the proper one. These entries will be presumed to be correct, but any one who is dissatisfied with them can contest their correctness in the ordinary Civil Courts having jurisdiction to entertain a suit for recovery of rent of the land which forms the subject-matter of the dispute.

"I will explain later on why this change is proposed. Here I merely note the fact.

"(2) The second great change proposed in the procedure prescribed in Chapter X is in the method and agency for the determination of fair-rents. Under the present law, Revenue Officers are bound to settle rents, as in the case of decision of disputes, on the same principles, in the same way, and following the same procedure as the Civil Courts; their final orders or decisions fixing fair rents are appealable to the Special Judge, but no second appeal, as regards the question whether the rent is pitched too high or too low, lies to the High Court against an order of a Revenue Officer fixing a fair rent.

"Under the Bill it is proposed that the orders of Revenue Officers fixing fair rents shall not be appealable to the Special Judge, but to the superior Revenue authorities, and that the finding of the Revenue authorities as to what the amount of the fair rent is, shall be final, except in certain specified classes of cases, in which it is left open to the parties to contest in the Civil Court the orders of the Revenue authorities even as to the amount of a fair rent settled, but only on certain specified grounds.

"If I have succeeded in making these two points clear, it will be manifest in the first place that the Bill not only does not curtail the powers of the ordinary Civil Courts, but, on the contrary, that it actually enlarges the powers of these Courts, that it transfers to them from the Revenue Officers the decision of all disputes involving questions of possession, status, right, and title, that it allows an appeal to the High Court on every point on which an appeal now lies to that Court, and that all it does is to alter the procedure for settlement of rent and to transfer the right of appeal on questions of fixing rents from the Special Judge to the Revenue authorities. It is true it allows no resort to the ordinary Munsiffs' Courts or to the High Court as to the amount of a rent settled, except on certain specified grounds, but neither does the present law.

"I now proceed to state reasons why the first of the changes mentioned above, namely, the transference of the decision of disputes to the Civil Courts, is proposed. The framers of the Act of 1885 thought that on a Revenue Officer beginning a record of rights, he would find himself face to face with numerous cases in which, on the one side or the other, the status of the raiyat, the area of the holding, the amount of the rent payable, were the subject of dispute. Unless he could deal with these disputes, the record would, they thought, be of little value, and it was, in their opinion, obviously absurd to empower one officer to settle the question of status and area, and then to send another to settle the question of rent. It appeared to them equally unreasonable to empower a Revenue Officer, with all the parties and witnesses before him, to decide disputes and then to allow the whole matter to be re-opened from the very beginning in a Civil Court.

"The natural result of such a course must, it was supposed, be to leave behind the Revenue Officer a crop of litigation for the Civil Courts to deal with after the Revenue Officer had left. Hence the Select Committee on the Tenancy Bill empowered the Revenue Officers to decide all disputes that might arise out of their own proceedings, instead of leaving them over for the decision of the Civil Courts.

"It will be asked, why is it now proposed to depart from the conclusion then come to in this respect? The answer is—*firstly*, that the Revenue Officers themselves have, in recent years, declared that the burden of deciding questions of possession, status, right and title, following the procedure of the Civil Procedure Code, is too heavy for them, and have begged to be relieved of it; and *secondly*, that the High Court have declared that the class of officers employed on survey and settlement proceedings are unfit for the work of deciding questions of status, right and title.

"In one of their judgments the Hon'ble Judges of the High Court expressed the opinion that the Legislature could not have intended to transfer civil suits as to rights in land between tenant and tenant to the Revenue Officer, and in another they declared that they did not think that the Legislature contemplated the formidable result that officers, such as those entrusted with the duty of preparing records of right, should be permitted to enquire into disputes as to the titles to land of indefinite extent.

"It will be shown presently that the intention of the Legislature in reality was that Revenue Officers should enquire into and decide all disputes coming before them. But however that may be, the proposals now made in this respect are in accordance with the views of the Hon'ble Judges as enunciated in the decisions to which I have referred, and as they are also in accordance with the wishes of the Revenue Officers concerned, it is hoped that they will meet with general approval.

"The sole objection to this part of the Government proposals is in this, that, as the authors of the Tenancy Act feared, the Revenue Officers will leave after them disputes which they have raised but not finally settled, and as these disputes will, if the parties wish to have them decided at all, have to be decided by the Civil Courts, the suitors, especially those of the poorer classes, may find the cost of litigation in the Civil Courts much higher and the results not more satisfactory than the decisions of the Revenue Officers have been. This is no doubt a serious risk; but the difficulties put in the way of Revenue Officers by the decisions of the superior Civil Courts are so great that some change in the law is considered clearly necessary, and no more satisfactory solution of the problem has in the opinion of Government been suggested than that now proposed in the Bill.

"The difficulties experienced, and the way in which it is proposed to meet them, cannot, I think, be more clearly explained than they are explained in paragraphs 2 to 5 of the Statement of Objects and Reasons, from which the extract which I am about to read is taken :—

'The intention of the framers of the Tenancy Act, as explained in Council by Sir Stuart Bayley, when presenting the Report of the Select Committee, clearly was that *all disputes affecting the record-of-rights or fixation of rents* were to be formally and finally decided by the Revenue Officer, subject only to appeal to the Special Judge, and to a second appeal to the High Court in certain specified cases. Entries in the record, which were not disputed up to the time of final publication of the record, were to be presumed to be correct till the contrary was proved. If a dispute as to any entry in, or omission from, the record arose, it was to be decided by the Revenue Officer, and his decision was to have the force and effect of a decree. So that every entry in the record as finally published was to have attached to it either (a) the presumption of correctness, or (b) the force and effect of a decree of a Civil Court. Objections might be made at any time during the publication of the draft record, which the Revenue Officer was to summarily hear and consider, and disputes raised at any time before the final publication of the record were to be heard and decided. The distinction between an objection and a dispute was not, however, clearly defined, and the result has been that the Civil Courts have in some cases held that the Revenue Officer is bound to hear, as civil suits, trifling objections which can be adequately disposed of summarily, to the satisfaction of the parties, without the expense and delay entailed by the formal procedure of a civil suit. On the other hand, where Revenue Officers have heard and decided disputes, following the procedure of the Civil Procedure Code, in which cases it was intended that their decisions should, subject to appeal to the Special Judge, be *res judicata* between the parties, the Civil Courts have in some cases held that their decisions, though not appealed against, were not *res judicata*, that no finality attached to them, and that it was open to the parties to re-open the questions decided in the ordinary Civil Courts.

'Further, the Courts have held, where a survey is ordered to be made, and a record-of-rights prepared, of a particular estate or local area, and a dispute arises as to whether certain lands formed part of that estate or local area, that the Revenue Officer has no jurisdiction to hear and decide the dispute, and that when a dispute arises as to whether land claimed rent-free was properly so held or not, the Revenue Officer has no authority to hear and decide the dispute; and, again, that when a dispute arises as between one landlord and another landlord, or one tenant and another tenant, regarding the ownership or occupation of land, the Revenue Officer has no authority to hear and decide the dispute. It has, in short, been held that the Revenue Officer can only hear and decide a dispute between a landlord and tenant, when the relationship of landlord and tenant is proved or admitted to exist.

'The effect of these decisions is to curtail to a very great extent the powers of the Revenue Officer to decide disputes arising out of his proceedings, to leave gaps in the record-of-rights, and to drive the parties to litigation after the Revenue Officer has left the ground, even as regards matters which he has nominally decided.

'That this was not the intention of the framers of the Act is shown by the following extract from Sir Stuart Bayley's speech in Council in presenting the Report of the Select Committee on the Tenancy Bill as passed :—

"What we have done, then, has been to give the Revenue Officer, in the first instance, power to settle *all* disputes that may come before him. Where no dispute arises, he will record what he finds, he will not alter rents, and his entries will only have a presumptive value in cases afterwards brought before the Courts; where a dispute arises, he will decide it, on the same grounds, by the same rules, and with the same procedure, as a Civil Court. His decision will be liable to appeal like that of the ordinary Civil Court to a Special Judge, who may or may not be the Judge of the district, and will be subject to a further special appeal to the High Court. In appeal, the High Court may settle a new rent, but in so doing is to be guided by the other rents shown in the rent-roll. In other words, there can be no second appeal to the High Court merely on the ground that the rent has been pitched too high or too low, but if a second appeal is preferred, as it may be on the ground that the Special Judge, owing to some error on a point of law, has, for example, found the holding to comprise more land or less land than it actually does comprise, or has given the raiyat a wrong status, and if the appellant succeeds, the High Court can, without altering the rates, reduce or increase the rent, as the case may be.

"The decision of the Revenue Officer in disputed cases, subject to these appeals, will have the effect of a judgment of the Civil Court and will be *res judicata*, thus bearing a fresh suit for enhancement for 15 years."

'It is clear that the decisions of the Civil Courts above referred to are not in accord with the intention of the framers of the Act expressed in the preceding extract, and it is thought that if the decisions of Revenue Officers are not to have finality on all questions that come before them, subject to appeal to the Special Judge, it is desirable to relieve them altogether of the duty of deciding disputes as civil suits, and to confine them, in the first place, to the preparation of a record of existing facts, rents and status. This record will be prepared, after careful investigation, under such rules as the Local Government may prescribe. It will be published in draft; objections made to any entry in or omissions from it will be carefully considered and disposed of under such rules as may be prescribed by Government; then it will be finally published, and the presumption of correctness will be attached to entries made in it. If the parties afterwards wish to dispute the correctness of any entry other than an entry of rent settled or any omission, they can do so in the Civil Courts.

"For these reasons then it is proposed that Revenue Officers shall be relieved altogether of the duty of deciding disputes. They will in preparing records of right confine themselves to ascertaining and recording, to the best of their ability, existing facts of possession and status. Presumptive evidential value of correctness will be given to the entries made by them in their records, and it will be open to the parties concerned to question the correctness of these entries in the Civil Courts.

"I now come to the reasons for the second important change proposed, namely, that in the procedure, method and agency for settling rents. The method of settling rents prescribed in the Tenancy Act is briefly this—the existing rents are presumed to be fair, and any one who wants to alter them has to show, by legal evidence, the grounds of the proposed alteration. The present Act provides that in all proceedings of settlement of rents under Chapter X the Revenue Officer shall, subject to rules made by the Local Government, adopt the procedure laid down in the Code of Civil Procedure for the trial of suits, and their orders fixing fair rents are appealable to the Special Judge. This implies that each individual case must, (subject to joinder of tenants holding under the same landlord in the same village,) be dealt with separately, a separate record being made and the evidence being separately recorded in each individual case. Now when settlements of revenue are being made on a large scale as they are in Orissa and Chittagong, and rents have consequently to be settled for all the tenants of an entire Division containing hundreds of thousands of holdings, it must be manifestly impossible to treat the settlement of rent in the case of each individual tenant judicially and as a separate civil suit if the proceedings are to be completed within a reasonable limit of time and at a reasonable expenditure of money. Moreover, it is not necessary for the ends of justice to treat each individual tenant's case separately. When, for example, a rise or fall in the prices since the rents were last fixed has been established to the satisfaction of the Court or the Revenue Officer, and an alteration in the rents generally is sought on the ground of rise or fall in prices since the rents were last fixed, it would obviously involve great waste of time and money to record the evidence on the point of alteration in prices over and over in each separate case. The same remark applies to a prevailing rate. If a prevailing rate is once established for a village or local area, it should not be necessary to record all the evidence in support of it over and over again in each individual tenant's case. But it is necessary to do this if the judicial procedure is to be followed in the settlement of rents. To meet these and other difficulties, it is now proposed to dispense with the judicial procedure altogether in the settlement of fair rents by Revenue Officers, and to substitute more elastic methods of settling rents under the supervision and control of the Superior Revenue authorities, whose findings will be liable to be contested in the Civil Courts on certain specified grounds and on those grounds only.

"Nobody who has not travelled through Bengal, Bihar and Orissa, and studied on the ground the existing land-tenures, can fully comprehend the immense variety and complication of tenures and of rent systems that prevail in these Provinces.

"In Chittagong, on the one side, small plots of permanently-settled and temporarily-settled lands measuring a half an acre or less—plots of what are known as long-term and short-term taluks, *iltams*, *daritmans*, and various other tenures of the kind, not to speak of plots embraced in ordinary occupancy and non-occupancy raiyats' holdings—are all interspersed like squares on a chess-board in the same village. The same person is often proprietor, and, having created a tenure under himself in favour of another person, then becomes an occupancy tenant under the tenure-holder of his own creation in land of which he is also proprietor.

"In Backerganj there are no less than 13 different grades of intermediate tenure holders between the proprietor and the actual cultivator, and the same person often holds shares as proprietor and again as tenure-holder under another tenure-holder and as occupancy raiyat under yet another, all in the same plot of land. To give a concrete example. In a particular estate in that district one Kamiruddin has a small plot of land. He holds a fractional share, represented by $\frac{7001}{15288}$ of that plot as an occupancy raiyat under a *howladar*, a share represented by $\frac{117}{3072}$ under another *howladar* as tenant at fixed rates, $\frac{102}{5072}$ as occupancy raiyat under the same *howladar*, and $\frac{147}{12258}$ as under-raiyat.

"Again in Chota Nagpur, in another direction, rent is assessed not by an acreage rate, but by guesswork according to the number of ploughs the tenant may have or the quantity of seed sown by him. In Bihar, in another direction, the system of tenures is comparatively simple and is analogous to that prevailing in the neighbouring districts of the North-Western Provinces; but even there proprietary interests are extremely complicated, and a proprietor has been known to hold the one-millionth part of an estate, the Government revenue of the whole estate being one anna.

"How is it possible for a Judicial Officer sitting in a Court with no experience of these things to understand these complications of tenures or to fairly assess the rents that they ought to pay?

"But even if an officer sitting in Court could understand the intricacies of tenures, still the assessment of fair rents on a large scale under the procrustean rules of judicial procedure would be extremely difficult.

"As Sir John Shore wrote more than 100 years ago: 'The infinite varieties of soil and further variations of value from local circumstances are absolutely beyond the investigation and almost the comprehension not merely of a Collector, but of any body who has not made it the business of his life.'

"Sir Charles Elliott wrote 80 years later when he was Settlement Officer in the Central Provinces: 'The art of fixing rent is an almost lost one. If you ask any zamindar why such a field pays such a rent, the most intelligent of them can give you no answer but that his fathers fixed it so.'

"Now, such being the complications of tenures and such being the difficulties in the way of settling rents, on a great scale, it is considered by Government that the best agency for overcoming these difficulties is that of Revenue Officers, who can go on the ground, see the land for themselves, observe and ascertain the facts on the land, and consult the people concerned in their villages. It is thought that the hard-and-fast rules of the law of evidence and of the Civil Procedure Code are not suited to proceedings of this kind. It follows that it is not desirable to tie Revenue Officers down by the Civil Procedure Code or prescribe any one method of settling rents, and to insist that Revenue Officers shall follow that method only.

"A good Settlement Officer who is tactful and sympathetic will make a good settlement without any law. He will consult the people concerned, be guided largely by what they think, and generally carry them with him. He will recognise the facts that the people who have lived on the land all their lives know very much more than he can of its capabilities, that the present rent is the result of the past history of the holding and of the haggling of all the ages, and he will not, if he is wise, ignore that history or attempt to raise or lower all rents to one dead level according to his own preconceived notions of the fitness of things. The landlords and raiyats are generally reasonable when brought together in their villages, surrounded by their neighbours and restrained by the public opinion of their fellows. Hence it is deemed to be a matter of cardinal importance that officers settling rents should be free to consult the people in their villages, to note what they say, and themselves to observe facts on the spot and make use of the knowledge thus acquired in coming to a conclusion as to what a fair rent would be. But this the law of evidence and the Civil Procedure Code do not allow them to do.

"Again, an inexperienced Revenue Officer may, under the present law, do great mischief either by excessive enhancements or reductions of rent. The superior Revenue authorities have no real control over him under the law as it stands, and his decisions, however manifestly wrong, can only be reversed by a regular appeal to the Special Judge, which appeal can only be made within 30 days of the passing of his order, and when made may take a very long time to decide. Moreover, as I have already indicated, if each and every landlord and tenant in a vast estate or local area under settlement of rents were to contest the Revenue Officer's orders or proposals for settling fair rents, and to fight out every case as a civil suit as they are entitled to do, under the present law, it is clear that the proceedings would be interminable, and the expense intolerable. Happily the raiyats and landlords have not fought out every case. They have generally accepted reasonable proposals; but, admitting this to be the rule, there have been exceptions where the tenants kept aloof and rents were settled behind their backs, which were manifestly unfair. These rents were not appealed against

to the Special Judge within the period of limitation. They became binding on the parties, and the Revenue authorities had no legal power to alter them. The law ought not to be based on the assumption that recourse to it will not be generally needed, and that people will always be moderate and reasonable.

"For all these reasons it is proposed to transfer the control of Revenue Officers in settling rents to the Revenue authorities, who are not to be tied down by the rules of judicial procedure, and it is also proposed to make the method of settling rents more elastic than it now is.

"The proposal as to procedure to be followed by Revenue Officers is that it shall be regulated by rules made by the Local Government, but the principles on which rents are to be settled by them are substantially in accord with the provisions of the present Act regulating enhancement or reduction of rents.

"The new section 104A. of the Bill enables the Revenue Officer to settle rents (1) by compromise, with the assent of the parties, when satisfied that the rents agreed upon are fair and equitable, or (2) to propose rents which, if accepted, may be settled as fair, or (3) to frame a Table of Rates where the conditions are such as to render this practicable, and to apply the rates to areas resulting from survey, or (4) to maintain the existing rents or to enhance or reduce them on the grounds specified in the Tenancy Act, or to settle them partly in one or more of these ways and partly in another.

"The first, second and fourth methods require no justification. They are in accord with the present law. It is obviously right that landlord and tenants should be encouraged to settle their differences among themselves, and that Settlement Officers should endeavour to make proposals which they may accept as being reasonable. It is because we have had Settlement Officers who were guided by these considerations that we have been able to carry on settlements of rent and revenue by amicable compromises on a large scale during the last twelve years. But you cannot always count on Settlement Officers being tactful, or on raiyats and landlords being reasonable, and when the former are injudicious or the latter unreasonable, and recourse to compulsory measures is necessary, it is submitted that the machinery of the law ought to be such as to permit of the vagaries of injudicious Revenue Officers being put straight, and unreasoning raiyats and zamindars brought to listen to reason.

"It is hoped that Revenue Officers will, in the future, continue to make amicable settlements, as they have hitherto done, but where they cannot do so, then they must have recourse to the third and fourth methods of settling rents. The fourth method merely reproduces the present law. The existing rents are to be presumed to be fair, and are to be enhanced or reduced on the grounds mentioned in Act.

"The system of Tables of Rates is new. That system was proposed originally by the Bengal Rent Commission, but it was abandoned when the Tenancy Act was being passed, because it was thought to be generally impracticable; it was admitted, however, at the time that there were some areas in which it was practicable to frame Tables of Rates. It is believed that this is the case in parts of Orissa, to which Province the Tenancy Act was not extended when passed. The provisions of the Bill for framing Tables of Rates follow to a large extent the proposals of the Rent Commission and those of the Bill of 1884. The Revenue Officer in framing his table is to have regard to the nature of the soil, situation of the land, means of irrigation, and other like considerations. The tables will be published, objections to them considered, and when finally approved by the superior Revenue authorities, they may be presumed to be correct, but the Revenue Officer is not to be bound to apply them in any particular case in which it may be unfair or inequitable to apply them.

"That the Revenue authorities are a more suitable agency for settling rents on a large scale than the Civil Courts has always been admitted, and was expressly asserted both by the Bengal Rent Commission and the Select Committee that reported on the Tenancy Bill just before it was passed. It has always been recognised that Government Officers, in settling rents for the purpose of ascertaining the assets on which revenue is to be based in temporarily-settled estates, should have more discretion in the matter of altering rents than was allowable to private individuals in suits in the Civil Courts. The Bengal Government, however, in 1885, with a view to showing that they claimed nothing in the way of enhanced rents in their own estates or in estates under settlement of revenue, which they were not prepared to concede to private landlords, consented to have the same rules and the same procedure applied to

their own estates as were proposed for fixation of rent in private estates; but apparently the difference was not sufficiently considered, between the difficulties of a settlement of rents on a great scale and a settlement of rent of individual tenants by a Revenue Officer or Civil Court. In individual cases it is easy to follow the procedure of the Civil Procedure Code, but where hundreds of thousands of tenants' rents have to be settled, it is obviously most difficult, if not impossible, to follow the Civil Procedure Code, and to complete the proceedings within a reasonable time at a reasonable expenditure. It is not now, however, proposed to differentiate between the settlement of rents in Government and that in private estates. The procedure proposed for settlement of rents in Government estates and in areas under settlement of revenue will, as heretofore, be open to private landlords if they wish to have recourse to it.

"On the point that Revenue Officers are the best agency for settling rents on a large scale the Select Committee wrote thus:—

'The questions whether a rent is open to settlement, and, if so, the amount at which it should be settled, are of a complex nature depending on two very different sets of considerations. They depend in the first place on issues, relating to such matters as the existence of the tenancy, the extent of the land, the status of the tenant, the conditions under which he holds, &c., and possibly involving points of law, which could not satisfactorily be decided without the security afforded by an ultimate appeal to the highest judicial authority. They depend in the second place on considerations of an economical nature, such as the state of prices prevailing at different periods, the effect of improvements, and so forth, which it is universally admitted cannot be adequately dealt with either in the first instance or on appeal except after local enquiry and by persons possessed of special technical knowledge.'

"The Government of Bengal undertook in 1885 (and it was the only Government in India that had up to that time done so) to settle, by the Agency of Revenue Officers, all rents in areas under settlement of revenue, because it was considered fair to the landlords that the rentals on which the revenue is based should be authoritatively settled and be capable of realisation through the Courts, for otherwise Government might arbitrarily assess its revenue at a certain percentage of arbitrarily assumed rentals when there was no real guarantee that the landlords could realise those rentals. Government also undertook to settle rents on the application of the landlords or tenants in private estates by the same agency, and following the same procedure.

"But if Government is to undertake so great a task, it is clearly necessary that it should have at its disposal workable methods and machinery for performing it. It is submitted that the judicial and the Civil Court procedure, which requires evidence to be recorded in each individual case, does not provide the requisite means for settling rents in the million of holdings of Orissa now under settlement of revenue, nor in private estates in Bihar and elsewhere, when the landlords or tenants apply for settlement of rents on a large scale.

"I have dwelt on these two points, the transference of the power of settling rents to the Revenue authorities, and the withdrawal of the trammels of judicial procedure among other reasons because, as is well known, the people of Bengal are, as I think rightly, jealous of any interference by the Executive with the powers of the Civil Courts, and it may be supposed that this Bill involves such interference.

"Sir, if there be any two things introduced by the British Government into Bengal, which are held by the people of these Provinces to be sacred and not to be touched by the irreverent hands of the Executive, they are the Permanent Settlement and the independence of the Civil Courts. Your Honour announced in one of your earliest public or quasi-public utterances that you had no intention of attempting to interfere with the privileges or to lower in any way the status and dignity of the Judiciary, and you have recently ridiculed the idea of attempting to interfere with the Permanent Settlement. If I may presume to make a remark on these subjects myself, it would be this that I think that the people of Bengal are rightly jealous of the preservation intact of these two great benefits conferred upon them by our Rule. It is, in my opinion, to the permanent settlement that the people of Bengal largely owe that superior prosperity which they enjoy, compared with the natives of some other parts of the Empire, and it is to the reign of law impartially administered that they owe the maintenance of their civil rights. It is submitted that neither the Permanent Settlement nor the jurisdiction of the Civil Courts is affected by this Bill.

"Save in the cases connected with the settlement of land revenue, the Bill does not oust or touch in any way the right of the landlords and tenants to

have their rents settled by the Civil Courts if they think fit. Excluding cases connected with settlement of land revenue, it is only on the application of the landlords or tenants themselves that the machinery provided in the Bill for settlement of rents can be brought into motion. The Bill merely offers the landlords and tenants an alternative procedure and agency to that for settling rents of the Civil Courts, and if they prefer the procedure and machinery of the Civil Courts, it will be open to them, notwithstanding anything contained in this Bill, to have recourse to the Civil Courts for settlement of their rents. I fully admit that the people of Bengal, at all events, have confidence, and rightly so, in the decisions of the Civil Courts, but the fact that the rights of over five million raiyats has been determined, and the rents of one and a half million raiyats settled by Revenue Officers in Bengal, during the past ten years, as a rule by consent of the parties to their proposals, without going through the lengthened formalities of judicial procedure, shows that the people of Bengal have also confidence in decisions and orders of the Revenue Officers properly controlled and guided. Revenue Officers have in Bengal since the passing of the Tenancy Act determined the status and recorded the rents of about five times the number of agricultural tenants, and they have settled fair rents for one and a half times the number of tenants in Great Britain and Ireland, together, and this great work has been effected without disturbances or disorder of any kind, while the number of appeals preferred to the Special Judges against their orders and decisions has been infinitesimally small.

"It is hoped, then, it has been shown, *firstly*, that the Bill does not trench on the jurisdiction of the Civil Courts, but on the contrary enlarges it, and *secondly* that the Revenue Officers are in a better position to settle rents on a large scale than the Civil Courts.

"There are other minor amendments proposed in Chapter X, which are described in paragraphs 21 to 31 of the Statement of Objects and Reasons. They are chiefly explanatory of the present law, or consequent on the important changes which I have mentioned.

"As I have detained the Council already too long, and other business awaits us, I propose to pass over these minor amendments and to come at once to the third and final object of the Bill, namely, the amendments proposed in the substantive law relating to the enhancement or reduction of rent.

"To avoid trespassing longer on the time of the Council than is absolutely necessary, it will perhaps be sufficient for me to read paragraphs 14 to 20 of the Statement of Objects and Reasons, in which these amendments are stated, and the reason for them given:—

'14. The third object of this Bill is to amend the substantive provisions of the law relating to the enhancement of rent, so as to make them workable on certain points on which they are now practically inoperative.

'In suits and proceedings for enhancement of rent on the ground of prevailing rate, the Civil Courts and Revenue Officers are bound to confine their enquiries and comparisons of rates to the same village, and the definition of what is a prevailing rate is so vaguely worded that in practice it is found almost impossible to enhance rents on this ground. A revenue survey village in Bengal may contain 100 acres, or several thousand acres, or may consist of scattered blocks. It does not necessarily furnish a proper standard of comparison. As regards the meaning of the term "prevailing rate" there is only one decision of the High Court bearing on the subject, and that declares that a prevailing rate is *not* an average rate, but does not explain what it is. The view taken by the Special Judges generally has been that a prevailing rate is a uniform rate paid by a majority of the raiyats for lands of the same class in the village. This was the interpretation generally put on the term "prevailing rate" under Act X of 1859.

'15. The effect of the wording of section 30 of the Act, as it stands, is to give a ground of enhancement which cannot be worked.

'It is proposed to somewhat enlarge the area for comparison, while an attempt is made to define what is meant by "prevailing rate" (*see* sections 2 to 4 of the Bill). Whatever objections there may be to this ground of enhancement generally, it is universally admitted that when land is held at a pepper-corn rent by reason of fraud or collusion between the proprietor's *amlu* and the raiyats, there is no other ground on which the zamindar can obtain an enhancement up to a reasonable rate, except that of the "prevailing rate," and in such cases it is just that this ground of enhancement should be made a workable one. The intention of the amendments proposed in sections 30 and 31 of the Act, and of the new sections 31A and 31B, is to effect this object, without at the same time endangering the interests of the tenants by making an average rate a prevailing rate, thus rendering it possible

to level all the lower rates up to such average rate while maintaining all the higher rates, however much in excess they may be of the average rate. As under the definition now proposed a prevailing rate will always be found where rates exist at all, and the effect of the new definition will be to greatly facilitate the enhancement of rents, and as rents are known to be already too high in certain districts, power is taken by Government to withhold the operation of the new definition from any district or part of a district. In order to guard against all the rates being levelled up to the maximum rate by manipulation of new prevailing rates from time to time, it is provided in section 31B that a prevailing rate once determined shall not be liable to enhancement except on the ground of rise in prices.

'16. It is also proposed to amend section 39 of the Act by repealing the words "prepared for any year subsequent to the passing of this Act" (see section 5 of the Bill). These words were not contained in the earlier editions of the Tenancy Bill, or in the Bill as it came in its final shape from the Select Committee, but were introduced into the Bill as passed, on the motion of Sir William Hunter, on the ground that there were no adequate safeguards for the accuracy of price-lists prepared for periods antecedent to the passing of the Tenancy Act. But though this may be so as a general rule, it is evident that there are cases in which adequate safeguards of the accuracy of price-lists, prepared for periods antecedent to the passing of the Tenancy Act, may and do exist, and in which the absence of the attachment of a presumption of correctness to lists carefully prepared causes serious injury and unnecessary inconvenience. Where, for example, a settlement of land-revenue or of rents is being made in large tracts, the Revenue Officer, after examination of traders' books of account, oral enquiry from witnesses on the spot, investigation of official price-current lists, jail registers, commissariat accounts, previous settlement records, and all other available sources of information, will, under the control of the Board of Revenue, be in a position to frame sufficiently correct price-lists for passed periods, to which the presumption of correctness may, after local publication and disposal of objections, be safely attached.

'17. It is reasonable that price-lists thus prepared should be capable of being used in evidence in all suits and proceedings for settlement of rent in such areas; but, under the law as it stands, all the information and evidence on which the Revenue Officer may have based his price-lists would, it is believed, have to be put on the record of each individual case, before an enhancement of rent could be based upon them. To remedy this state of things, it is proposed to repeal the words above quoted.

'18. The Local Government may, it is thought, be trusted not to order the preparation or publication of price-lists for past periods where there are no sufficient materials for the preparation of such lists, or no adequate safeguards for their correctness. But where such materials do exist, and there are adequate safeguards for the correctness of the lists, there is no reason why Government should be debarred from ordering the preparation of them, or refusing to attach the presumption of correctness to them when prepared. To prepare price-lists for past periods, which would have no evidential value, would be useless, and, when lists have been prepared after careful local investigation and examination of all available sources of information, to require all the evidence and information on which they have been based to be reproduced on the record of each individual tenant's case, is unnecessary waste of time and money.

'19. An addition is proposed to section 52 of the Act (see section 6 of the Bill). It has been held by some Special Judges, interpreting a decision of the High Court, that when additional rent is claimed on the ground of excess area, the landlord must indicate the precise plots or pieces of land acquired by the tenant in excess of the original holding, while section 52 itself does not provide for the assessment to rent of excess lands where there are no rates for lands of a similar description in the vicinity, but lump rentals.

'20. The section, as amended, indicates that it should not be always necessary, in order to prove excess area, to point out the particular plots that were acquired since the original letting, and provides a rule for assessment of such excess areas, when proved, where there are no rates in force. Where the original letting was at so much a bigha, and it is shown by measurement, by the same standard and under the same conditions, that the tenant is holding a larger number of bighas than he is paying rent for, it should not be necessary for the landlord to point out the particular plots which the tenant has acquired in excess of the original area comprised in his holding.

"I have now endeavoured to explain, so far as the limits of a speech and the patience of the Council can be expected to permit, all the main provisions of the Bill which, it is hoped by Government, will be generally acceptable to all those who are interested in the land. The Bill, if passed, will facilitate the settlement of rents with a view to the settlement of revenue; it will also facilitate the settlement of rents in private permanently settled estates where the landlords or tenants apply for such settlement; and it will facilitate the enhancements of rent where rents are unduly low, and remove grievances of which the landlords now complain. It does not, it is submitted, trench on the jurisdiction of the Civil Courts, but on the contrary enlarges that jurisdiction. I now move that the Bill be read in Council. If this Motion is carried, the Bill will be circulated and opinions will be invited upon it before it is further proceeded with."

The Motion was put and agreed to.

The Bill was read accordingly.

RAIN-GAMBLING BILL.

The Hon'ble Mr. BOLTON moved that the Report of the Select Committee on the Bill for the suppression of rain-gambling be taken into consideration.

The Motion was put and agreed to.

The Hon'ble Mr. BOLTON also moved that the clauses of the Bill be considered in the form recommended by the Select Committee. He said:—

"I move, Sir, that the Report of the Select Committee on the Bill for the suppression of rain-gambling be taken into consideration. When introducing the Bill, I fully explained the necessity for legislation and the very limited object for which it had been undertaken, and, with a single exception, no Member of the Council raised objection to this measure, while many Members expressed their strong and cordial approval of it. Since that date the Bill has been subjected to much opposition and criticism as groundless as it was unexpected, and it is desirable that I should again explain its precise intention and scope. I cannot but think that if its critics had taken the pains to consider carefully its brief provisions, and to read with equal care the report of the proceedings of this Council, the public would have been spared the agitation which has been set on foot, proceeding from misconception of the intention of the Government and imaginary fears. Far-reaching consequences have been attributed to this Bill, which the Government certainly never contemplated, and see now no reason to anticipate. That strenuous opposition should be offered to the measure by those Marwaris who are directly or indirectly interested in the rain-gambling establishments is natural, but it is surprising that they should have received the support of others in protesting against legislation; the more so as the leading members of the Marwari community are anxious that rain-gambling should be suppressed.

"Now, Sir, what are the simple facts of the case? The law of England, the law of India, and, I presume, the law of every country which can lay claim to a civilised and enlightened administration, prohibits the practice of gambling in public or common gaming-houses, kept for the profit or gain of the persons keeping such houses. Apart from its evil consequences, from a moral point of view, such gambling is regarded as a public nuisance, and as a measure of Police, its suppression is enforced. In Bombay public rain-gambling was found to exist, and six years ago its suppression was decreed by an Act of the Legislature of that Presidency. Rain-gambling has existed in Calcutta for many years. It was long confined to the Marwaris, but in recent years it has extended to other classes of the community, and has become a serious scandal. Three public gaming-houses are openly kept in one section of the town, complaints have been made of the evil done to many who resort to them, and of the spreading of this evil to even *purdah nishin* ladies of respectable families through the agency of women employed by the owners of the houses, and the Police have represented that a serious public nuisance exists. Could the Government, consistently with its action in enforcing the law against other common gaming-houses, have persisted in ignoring this state of things? But one answer can be given to the question. The Government was bound to interfere; and it decided to do so. The existing law, however, though its spirit unquestionably condemns this gambling, could not be brought into action, as the definition of common gaming-houses, framed long before rain-gambling had assumed its present character, does not cover that form of public gambling. It was necessary, therefore, to amend the law, and the present Bill was framed. Its sole and specific object, as the preamble shows, is to secure the suppression of the practice of rain-gambling, and it is inconceivable that any opposition should have been raised to the passing of such a measure, except by those whose profits will disappear with its enactment into law. Objection has been taken to the rapidity with which this Bill is being passed through the Council. The Bill had, in the ordinary course, to be submitted to His Excellency the Viceroy in Council for approval, and this necessarily involved some delay. When that approval was received, no reason whatever existed for deferring the introduction and passing of the measure to another Session. It had, therefore, to be pushed through during the remaining weeks of the present Session. Delay in proceeding with it would have been entirely uncalled for. The facts which rendered

legislation necessary were fully ascertained and clear, and further inquiry was superfluous. The Associations interested had been consulted, and had, with a single exception, recommended legislation; and the immediate passing of the Bill could injure only the keepers of the gaming-houses, whose very business it is the object of the Bill to suppress. The suggestion which has been made that this Bill is the commencement of a crusade on moral grounds against all forms of betting or play for money calls for no serious notice. The Government is concerned with this Bill only, and it is designed solely for the suppression of one form of public gambling, and goes not one step beyond the existing law, which leaves other gambling untouched. I trust, then, that the Council will, by its vote to-day, bring these Burra Bazaar gambling establishments within the letter, as they are already within the spirit, of the law against public gambling.

"I confess, Sir, that the Hon'ble Mr. Wallis' object in recording his Minute of Dissent to the Report of the Select Committee is not clear to me. He observes that he disapproves of gambling in any form, and would be only too glad if it could be put a stop to by legislation or otherwise, and yet he takes exception to this Bill, which is designed to suppress one form of public gambling, and the efficacy of which for this specific purpose cannot be doubted. The Hon'ble Member might surely have been expected to receive this Bill with satisfaction and approval. He is thus, I am constrained to remark, inconsistent in his general objection to the Bill; but he is even more so in his special objection. While expressing a fear that this Bill may be the precursor of repressive legislation against all other forms of wagering, he, at the same time, condemns it as being less comprehensive than the Bombay Act, which includes wagering within the definition of 'gaming', and thus brings wagering of all kinds within the prohibition of the law.

"I must draw attention, Sir, to the notices of amendments for discussion at this meeting, which have been received from the Hon'ble Babu Guru Proshad Sen and the Hon'ble Mr. A. M. Bose. Both Hon'ble Members propose to move that section 47 of Act IV (B.C.) of 1866 and section 6 of Act II (B.C.) of 1867 be repealed. These amendments travel beyond the scope of the Bill, and would materially effect the existing law against public gaming. The Bill before us is one for the suppression of rain-gambling, and it seeks to effect that object by adding rain-gambling to the other forms of gambling which become illegal when practised in common gaming-houses. The proposal to introduce this simple change in the existing law cannot be held to invest this Council with authority to proceed to amend any of the substantive provisions of that law. An amendment of this far wider character would require the sanction of the Governor-General in Council, and that sanction has not been obtained. I must, therefore, apply to you, Sir, to disallow these amendments of the Hon'ble Members before the Select Committee's Report is discussed, and I believe that the Hon'ble the Advocate-General is with me in this matter.

"Two other amendments are proposed by the Hon'ble Mr. A. M. Bose. The first is, I conceive, in order, but it will be my duty to oppose it as entirely unwarranted. The second, which provides for a right of appeal against any conviction for rain-gambling, is both out of order and superfluous. The right of appeal is already given by the Code of Criminal Procedure, and provision for it is not needed in the present Bill. The Hon'ble Member's amendment, being in general terms, would, moreover, have the effect of withdrawing the restrictions on appeal which are laid down for all cases in sections 411 and 413 of the Code. So important a change in the law cannot be discussed in this Council without the sanction of the Governor-General in Council. I would request, therefore, that this amendment also be disallowed."

The Motion was put and agreed to.

The Hon'ble Mr. M. S. Das said:—"In the Select Committee we decided that the little word 'anything' should be printed as two separate words. It was the suggestion of the Hon'ble Mr. Wilkins and was approved by all the Members of the Select Committee. I suppose the Secretary will take care that it will be printed as two separate words in the Act."

The point was noted.

The Hon'ble BABU GURU PROSHAD SEN said:—"I wish to show that my amendment is in order. The section, the repeal of which I propose, stands thus in the gambling laws 'When any cards, dice, gambling-table, cloth, boards or table, instruments of gaming are found in a house, etc., etc., etc., it shall be evidence, until the contrary is made to appear that such house, etc., etc., is used as a common gaming-house, and that the persons found therein were there present for the purpose of gaming.'"

"Under the present Bill the words "instrument of gambling" as used in that section, will stand extended to include spouts, tanks, &c. To this extent the Bill enlarges the section which I wish to get repealed. Therefore my present motion is an amendment of the Bill and exactly within its scope.

"But I also claim to come under rule 21 of the rules for the conduct of business.

"I respectfully beg to submit that the rule entitles members to make original motions in respect of all matters by giving previous notice. If it is to be held that this motion can only be made by obtaining the previous sanction of the Government of India, the right comes to be nugatory, and no such restrictions exist in the rules.

"I submit further that if this Government receives a sanction from the Government of India to make a specific change in a certain law, the whole of that law comes for consideration before the Legislature, and any private member is entitled, under section 21, to bring any other section of the said law for consideration before the Council, and there are good reasons why this should be so. Government wants to enlarge the scope of a Penal Act; members say: 'You are welcome to do so, but at the same time take away a part of the stringent procedure under which this penal law is enforced. They say that if there be urgency in the one case, there is urgency in the other.'

"They say that 'We cannot consent to the enlargement of a penal law without providing at the same time that the people are not unnecessarily molested by leaving the other portions of the law as it is.'

"The section in the gambling law which I wish to get repealed, refers to a previous section under which search has to be made. Once this search is made and a pack of cards or innocent things like that found, the prosecution case is complete. The onus is shifted, the accused has to prove his innocence, or stand convicted as an offender contrary to all canons of criminal trials as it prevails in this country. It is not that a conviction under the Act is a light matter in India. It is true that there may be a few rupee fine, but a convicted gambler is a marked man in society for all his life long. Happily this much of public opinion we have yet left amongst us.

"It is said that the Indian law is in this respect in accord with the laws of England. The circumstances of the two countries differ. In spite of what your Honour's Government and the Government of your predecessors have been doing for improving the Police, there is yet admittedly much left to improve, and this much I feel myself justified in saying from my place in the Council that the Police do not yet enjoy the full confidence of our honest people. It is true that the warrant for the search proceeds either from a Magistrate or District Superintendent of Police, who are moved only on credible information; but this credible information on which these authorities are moved, come in the back of the accused, and there is no test of its accuracy nor any punishment laid down for an illegal raid."

The Hon'ble Mr. A. M. Bose said:—"Permit me to add a few words, as the question which has been raised affects also the amendment standing in my name. The Government has submitted this Bill for the suppression of rain-gambling, not in a form complete in itself, not as a complete Bill which defines the offence and provides a procedure and a penalty. It asks the Council to amend the general gaming law that now obtains—to amend the provisions of that law only so far as to include rain-gambling within its scope. Under these circumstances I respectfully submit that it is open to the Council or to any member of it to say that, before the general gaming laws are so amended as to include this particular form of gambling, certain provisions of that law ought also to be amended, and that unless they are amended, this Bill ought not to be passed. I submit that as a matter of order it is open to us to propose such

amendments. Then, with reference to the objection that the sanction of the Governor-General has not been obtained to such amendments, I beg to point out that while as a matter of administrative and executive practice Bills are and have to be submitted to the Government of India before introduction in a local legislature by the Governments concerned, there is no limitation placed upon amendments which may be proposed by any Member of the Council when the Bill has once been introduced, provided those amendments are germane to the object in hand, there is nothing in any of the 55 Rules which have been laid down for the conduct of business in this Council prohibiting the proposing of amendments unless those amendments have been previously placed before the Government of India. I submit that the proceedings of this Council are regulated by these rules, and that there is no room for doubt upon this point. If the question of order is absolutely clear to your Honour, I have nothing to say, but if there is any room for doubt, I hope your ruling will be in favour of allowing these amendments to be put so that the matter may be discussed on its merits."

The Hon'ble SIR CHARLES PAUL said:—"I think that both the Hon'ble Members who have last spoken have been labouring under a very serious mistake. I would ask them to take their memories back and remember what the Hon'ble Mr. Bolton has explained very clearly this morning, that the object is to include houses for rain-gambling within the definition of common gaming-house in the existing law. They will find that we are not now amending the substantive portions of the law which is contained in the Acts of 1866 and 1867. We are only extending those provisions to a certain form of gambling, and therefore all that can be urged on the present occasion is that one particular provision shall not apply. The Hon'ble Mr. Bose has very ingeniously put forward an alternative amendment which is not open to the objection; he felt the difficulty of the situation, and hence his amendment. Now he says the law is clear and beyond doubt. As an advocate a man is allowed to assume many things; but when you come to consider the reason of the thing you will see that when we are applying the provisions of the law to other forms of gambling we have really no power to amend that law itself. Both the reasons which have been given by the Hon'ble Member in charge of the Bill are right; first that the amendment is not within the scope of the law, and secondly that we have no power. The complaint made that the Magistrates are shut out from giving their own view of the law is really without foundation."

The Hon'ble THE PRESIDENT said:—"I entirely concur in the view which has been taken by the Hon'ble the Advocate-General. This, it must be remembered, is a subordinate Legislature. I have received no permission to amend the Gambling Acts. I have only received specific sanction to include rain-gambling-houses, a certain class of gaming-houses, within the purview of the existing law. I also agree with the Hon'ble the Advocate-General that the Hon'ble Mr. Bose's alternative amendment may be put as it is not out of order. But before formally closing the discussion of this matter, I wish to observe that there has been a good deal of misapprehension as to the scope and aim of this Bill, and especially as to the scope of the section of the law which it is now proposed to repeal. I shall therefore in disposing of this matter finally call attention to what the law really is. It has been said in a facetious article in a newspaper, and it has also been said elsewhere, that under this section of the law the Police may enter the Bengal Club or even Belvedere and seize upon any cards they may find there, and rush off with the members of the Bengal Club and with the Lieutenant-Governor himself and place them before a Magistrate as coming within the purview of this section. Nothing could be more absurd and silly than remarks of that description. Section 6 can only apply to houses which are entered and searched under the provisions of section 5, and searches can only be made under that section when the Commissioner of Police, the District Magistrate or other officer has been satisfied upon reliable information, and after such enquiry as may seem to them necessary, that a certain house, place or enclosure is kept as a common gaming-house. And what is a common gaming-house? It is a house—hell as it is ordinarily called in England—which is run for the benefit and advantage of the owner

or occupier thereof. And this provision only applies to houses which have been entered into after full enquiry. And surely common sense tells us that when you have made that enquiry upon information received, if you find instruments of gaming, that is *prima facie* evidence in the case. The Hon'ble Babu Guru Proshad Sen has observed that the circumstances of India and England are very different, and therefore it is no excuse to say that the provisions of the law have been borrowed from the English law on the subject. But what does the Hon'ble Member say to the fact that all the Legislatures in India have proceeded on the same lines; for that section exists in the Gaming Acts of every presidency—in the Acts passed for the North-Western Provinces, in the Punjab, Bombay, and in Madras and in Burma. And if the section has been taken from the English Act on the subject, it only shows that the Legislatures in passing that provision were guided by the long experience of the past and by the absolute necessities of the case. I rule the amendment out of order. The Hon'ble Mr. Bose's second amendment is not out of order."

The Hon'ble THE PRESIDENT rules the following motions to be out of order:—

(1) By the Hon'ble BABU GURU PROSHAD SEN.

That the following section of Act II of 1867 (B.C.) and the corresponding section 47 of Act IV of 1866 (B.C.) be repealed:—

"Section 6 of Act II of 1867 (B.C.).—When any cards, dice, gaming-table, cloth, boards or other instruments of gaming are found in any house, tent, room, space or walled enclosure entered or searched under the provisions of the last preceding section, or about the person of any of those who are found therein, it shall be evidence, until the contrary is made to appear, that such house, tent, room, space or walled enclosure is used as a common gaming house, and that the persons found therein were there present for the purpose of gaming, although no play was actually seen by the Magistrate or Police Officer, or by any person acting under the authority of either of them."

(2) By the Hon'ble MR. A. M. BOSE.

That the following section be added to the Bill:—

"Section 47 of Act IV of 1866 (B.C.) and section 6 of Act II of 1867 (B.C.) are hereby repealed."

The Hon'ble MR. A. M. BOSE moved that the following section be added to the Bill:—

"The provisions of section 47 of Act IV of 1866 (B.C.) and of section 6 of Act II of 1867 (B.C.) shall not apply to any offence created by the operation of this Act."

He said:—"Before I make some observations on the amendment itself, I venture to express the hope that at any rate no objection on the merits will be taken to this amendment on the ground that it deals with a special form of gambling, while it leaves untouched the general provisions with regard to gambling. It is not the fault of my amendment if that should be the consequence of its adoption. By the ruling just given, I am limited perforce to the question of rain-gambling. And then I labour under another and an unusual disadvantage, namely, I have to follow, Sir, your exposition, partly at any rate, with regard to the merits of the amendment I have to discuss. And if I point out what I submit is the true effect of sections 5 and 6 of Act II of 1867, I do so, I need hardly say, with the utmost possible respect to what has fallen from Your Honour. I am fully aware that the provisions of section 6, for instance, of Act II of 1867 will apply only after search has been made in accordance with the provisions of the previous section 5 of the same Act. I admit that there is a complete procedure as the law stands, and I have to submit reasons why I think it is not a desirable procedure, before I ask the Council to accept my amendment in connection with this Bill for the suppression of rain-gambling. Information is received either by a Magistrate or by some other officer vested with the full powers of a Magistrate or by a District Superintendent of Police as to a certain house being a common gaming-house; he holds a secret inquiry without of course any notice to the

accused, and is satisfied or believes that it is a common gaming-house. Then he empowers certain officers of police, not below such rank as the Lieutenant-Governor shall appoint on that behalf—I do not know whether any such rank has been so specified—to enter such house, by force, if necessary, and to make an exhaustive search. Then if this police officer, whoever he may be, says before a Magistrate that he found, and produces, say, a pack of cards as the result of that enquiry and search, it must be taken as evidence, until the contrary is established, that the house is a common gaming-house and every single individual found therein is a gambler. What I wish to specially point out is this, that the previous information upon which the Commissioner of Police, Magistrate of the district or the District Superintendent of Police has been acting would not be before the Court. That previous information is, no doubt, accepted and acted upon by the police. But it is *ex-parte* information. And not only so; but as section 5 provides, it need not be in writing nor on oath. It is information for which nobody may be held responsible or be called to account. It may be that people are actuated by their feelings of enmity with reference to certain individuals, and make statements behind the backs of the persons whom they wish to annoy, and such statements are *prima facie* accepted as sufficient by the police officer to whom they are made. If the law provided that when the matter comes before the trying Magistrate, that information will have to be repeated subject to the right of cross-examination, the position of affairs would be very different. But that is not the case. All that is necessary for the Crown case is for the police officer to state that he has proceeded on certain instruction, and that he found certain instruments of gaming—cards, dice, &c. Then what will happen is this—that will be evidence, until the contrary is made to appear, that the house or place so searched is used as a common gaming-house, and that the persons found in that house are all present there for the purpose of gaming. I regret I have not with me now an extract from the judgment of Mr. Tweddie, late a District Judge, published a few days ago in the papers, in which he pointed out how the matter stood, and how all that was necessary was, not to have the original information tested or even to give any information on that point, but that it was only necessary for the prosecution to prove the two facts I have mentioned, viz., the police searching the house under orders and finding a pack of cards. In such cases the law should not make it obligatory on the Magistrate to presume that it is a common gaming-house, and that the persons present there were present for the purpose of gaming, until the contrary is established by the accused. The law ought to leave unfettered the discretion of the Magistrate as to the amount of weight he would attach to any particular facts bearing on the case. For instance, if, as the result of a search under this Bill, a book is produced containing a record of the bets which are made in the matter of what is called rain-gambling, no doubt the Magistrate will attach the greatest possible weight to that circumstance, and if he is satisfied that the record of bets was so found, he might well hold that, unless that fact is explained away, he will act upon it. If on the other hand what is produced are a pack of cards or dice, or evidence of the existence of a clock or water-spout which are said to be instruments of gaming; if such evidence is given, it will be open to the Magistrate to hold that it does not raise a presumption that the house is a common gaming-house. In ordinary cases under the criminal law matters are left to the discretion of the trying officer who would have all the circumstances of the case before him, and I maintain that the same liberty should be left to the Magistrate in gaming cases also; or in other words, to use the language made familiar by the Evidence Act, instead of the law saying that the Magistrate shall presume guilt until the contrary is made to appear, it ought to be that the Magistrate shall act in every way in accordance with the ordinary law, without any special provision of that kind being needed. Then reference was made to the fact that this is the law in England, and no doubt Hon'ble Members will attach great importance to that fact. I trust they will attach the same importance to analogy from English Law when it makes in favour of the liberty of the subject. In the next place I will repeat what fell from my hon'ble friend, Babu Guru Proshad Sen, that in this particular respect there is an important, a vital, difference in the circumstances of England and India, namely, in the controlling influence of the public press and public opinion and in the constitution of the police force in the two countries. I would also refer

to another fact which has reference to the Bill itself, namely, that in addition to Bengal Acts IV of 1866 and II of 1867, there is also an Act of the Governor-General in Council, XXI of 1857, which relates to gaming-houses in the town of Howrah; and there is this important, I was going to say significant, fact, that although it contains all the other provisions of the gaming law, the provisions of section 47 of Act IV of 1866 and section 6 of Act II of 1867 do not find a place in that Act. In Act XXI of 1857 the gaming sections are from section 10 to section 15, and section 12 corresponds to what I have been reading out as section 5 of Act II of 1867; but section 6 of Act II of 1867 is conspicuous by its absence. The important point is that in the gaming law applicable to Howrah the presumption which is contained in section 6 of Act II of 1867 [The Hon'ble SIR CHARLES PAUL said:—"There is nothing said about presumption in the Act."] I submit that it is more than presumption. I am much obliged to the learned Advocate-General for mentioning this fact, because it enables me to refer to the matter at once. What section 6 provides is more than presumption. It enacts, as I have pointed out, that when any cards, dice, gaming-table, cloth, boards or other instruments of gaming are found in any house, tent, room, space or walled enclosure, &c., it shall be evidence, until the contrary is made to appear, that such house, &c., is used as a common gaming-house, and further that the persons found therein were those present for the purpose of gaming, although no play was actually seen by the Magistrate or police officer or by any person acting under the authority of either of them. I was using the word presumption in referring to the provisions of the Act of 1857 for the sake of shortness, but returning to section 6 of Act II of 1867, unless the contrary is proved by the accused, the mere fact of the finding of any of these things upon a search made under the previous section shall be evidence of his guilt. Surely no provision could be more in violation of the rule which requires the prosecution to prove the guilt of the accused, and not the accused to prove his innocence?"

The Hon'ble THE PRESIDENT said:—"How do you get over this section of the Act of 1857, which provides that 'any person found in any common gaming-house during any game or playing therein, shall be presumed, until the contrary be proved, to have been there for the purpose of gaming?' Is it not possible that the Act of 1867, being 10 years older, proceeds upon more advanced principles of legislation?"

The Hon'ble MR. A. M. BOSE replied:—"The section Your Honour is referring to, is a different section; it provides for the case of people found in a place where play is proved to be actually going on. That makes all the difference. It is a different section altogether which finds a separate place both in Acts IV of 1866 and XXI of 1857."

The Hon'ble THE PRESIDENT said:—"The same idea applies to both cases. People who put themselves into a false position have to take the consequences. I want to point out again that the law attaches a presumption against people found going to such places."

The Hon'ble MR. A. M. BOSE continued:—"The difference is this, that the provisions of section 45 of Act IV of 1866 apply to cases where play is going on, and that being so, the presence of persons there is a presumption, unless the fact is explained away, that they are there for the purpose of gaming. Then, after that comes section 46, which says that a search may be ordered by the Commissioner of Police or by a Magistrate, and then follows section 47, which is the section we are dealing with. I refer to this to show the difference between the provisions in the Howrah Act and the provisions in these two Acts. It strengthens my position in this way. If on the other side of the river it is found that the ordinary rules and practice of the criminal law are sufficient, there is no reason why in Calcutta and other parts of the Province to which those Acts refer, the provisions of the law should be different. These are the reasons why I think it desirable that these sections of Acts IV of 1866 and II of 1867 should not be extended to this Bill for the suppression of rain-gambling. I most cordially support the Bill which has been introduced in this Council; and it is because the existence of these particular provisions

provokes, and I believe, justly provokes, the feeling that this law is of a very exceptional character, and also because I believe the ordinary procedure of the criminal law is sufficient for the purpose that I press my amendment for the acceptance of the Council. Moreover, I have shown that in the case of the town of Howrah these exceptional provisions have not been found necessary, and therefore there can be no necessity for their inclusion in this Bill."

The Hon'ble SIR CHARLES PAUL said:—"I submit that this amendment is as indefensible as those which have been ruled by your Honour to be out of order. I have often perceived a desire on the part of certain members of this Council to put the hands of the clock back. When we have reached a certain point in legislation, when a certain principle has been adopted in reference to legislation of a certain character as a sound principle to act upon, the legislature has then a standpoint to go upon in the case of future legislation of a similar description. But as I have said, I have noticed on several occasions that when the slightest opportunity is given an attempt is made to go back from that principle. I have heard nothing from the Hon'ble Mr. Bose to justify the omission of section 47 of Act IV (B.C.), of 1866 and of section 6 of Act II (B.C.) of 1867 from their application to this Bill. It is admitted that in every case the administrators who rule over this country have adopted these measures to put down gaming houses, and every Government and every system of legislation have adopted the rule and have laid down the procedure that if any article of gaming is found in a house which has been searched under the immediately preceding sections of these Acts, the same shall be evidence. Yet without the slightest reason, except some carping reason which I shall refer to later on, the Hon'ble Member wants the legislature to go back; and he has referred to the Howrah Act, XXI of 1857, which, he says, ought to be the model for our legislation. This, I say, is a confession of weakness on his part. If he wanted to strengthen his argument, he might have done so by some thing more important than that legislation for Howrah. I have often heard it said that if you allow the police to interfere, false evidence will be brought forward. If that argument is to have any weight, then the Penal Code and the Criminal Procedure Code and all the laws by which people are brought to justice ought never to have been passed. In the particular instance before us, if false evidence is given, the person upon whose information the police acted is responsible. In one of these Acts the information upon which the police are authorised to act is sworn information; in the other Act it is credible information. I have not the slightest doubt that the Magistrates of this presidency town, who are gentlemen of honour and independence, will never allow a respectable man's house to be entered falsely without bringing malicious persons to justice; and if you have confidence in them you will not require any other safe-guards than were provided in the law. The second point is this. The Hon'ble Mr. Bose says that as you proceed on information given to the police, you ought to allow the man upon whose information the search was made to be examined and cross-examined. It should be remembered that the result of the information which will be given will be to break up the system under which fortunes are being built up, and would you allow the life of such a man to be at the mercy of the people concerned? Certainly not. The information is for the benefit of the public and therefore is guarded by a certain amount of secrecy. This is a second instance of the desire to disturb one of the principles which has been accepted in all proper forms of legislation and in all civilised administrations. The Hon'ble Member's third argument proceeds upon a misconception. He says if an instrument of gaming is found in a house that has been searched on information which has been given, it shall be a presumption that the person occupying that house at the time are engaged in gaming. The word presumption does not occur in these sections, but the Hon'ble Member explains that away by saying that the section says it shall be evidence until the contrary is proved. That means that the Magistrate shall look upon it as a piece of evidence, but if he considers that the general circumstances of the case disprove that evidence, then it is disproved. I will give an instance. Upon information given under this Bill a house is searched and a clock is found. That is an instrument of gaming under this Bill and therefore is evidence. But that

evidence may be rebutted by the person being able to show that the police did not find anything else which may be taken with the clock as an instrument of gaming; then the evidence will be rebutted. I consider that under this Bill people who come forward in the interests of philanthropy and humanity ought to be safeguarded. The liberty of men is guarded by their own conduct; an honest man does not stand in need of such protection as the Hon'ble Mr. Bose thinks he requires; the onus of proof being thrown upon him affects him but in a trivial way. Suppose a man enters the house of a gentleman upon false information and he finds a pack of cards. He can prove that he has no gambling in his house. He can prove that by his servants and by his friends. What grievance is there? The reason why this section has been introduced is this—after a particular gaming-house has been spotted, the police go there, but the moment they enter everybody disappears. How are they to prove that it is a gaming house; if the people who were there happen to leave behind them a pack of cards or dice or other instruments of gaming, they can be produced and will be accepted as evidence. I therefore say that section 6 of Act 11 of 1867 is the result of necessity. It is not an arbitrary power invented by the Government to harass the poor, and I therefore submit the Hon'ble Member is utterly wrong in respect to this particular matter. But I am glad to find one thing, namely, that the Hon'ble Member entirely approves of the Bill; and I may add my testimony that I am wholly in accord with the Hon'ble Mover of the Bill, and I was glad to hear from him a clear, logical and complete statement of the objects of the Bill. It is easy to find fault, if you will not read the speeches of those who bring forward a Bill. Let those who attack the views of the Hon'ble Mover of the Bill study his speeches carefully, and they will find their shafts of ridicule are pointless and their arrows of criticism discharged at the Mover blunted."

The Hon'ble MR. M. S. DAS said:—"At the last meeting of the Council I drew the attention of the Council to the difference between the two Acts with regard to the sections which provide for the initial proceedings under the Act. I did not give notice of any amendment simply because I believe that an amendment would have been out of order. At the same time I believe that if the Council is of opinion that this difference is one that ought not to exist, then, as has been done in previous instances, an amendment ought to be made, if not now, at some future time. With all possible respect to the learned Advocate-General, I must say I do not agree with the reasons he gave to show that there is no difference between the provisions on this point in the two Acts. Credible information is not so good as information on oath; because credible information is not reduced to writing, and a public officer who acts on such credible information cannot be held responsible. I repeat, with all possible respect to the learned Advocate-General, what I said at the last meeting, that if a man's house is to be searched some information should be recorded so that the informer may be held responsible should the search prove that the house is not a common gaming-house. A public servant who acts on credible information should first believe the information to be credible, but there will be nothing on record by means of which the person injured can reach the person who has started the initial proceedings. Credible information may mean information given to the District Superintendent of Police by his bearer. In the Criminal Procedure Code there is no provision which enables a Magistrate to act upon credible information, but in all cases the information is to be recorded in writing. Here you are to trust to memory, and what can you get from the memory of any public servant after a few weeks as to what he had heard from a particular person? With regard to the amendment before the Council, I wish to add that until yesterday I had not read the Act carefully, and I thought that to allow the mere fact of finding certain things in a house to be used as evidence pointing to the house being a common gaming house and to certain other things is not a reasonable provision; but on looking at the Act carefully, I found that the provision giving power to institute a search is confined to the house having been shown at the outset to be a common gaming-house. So that the Magistrate or Superintendent of Police has first to be satisfied that a certain house is a common gaming-house, and then if a search is made and instruments of gaming are found, the things so found are to

be evidence, until the contrary is proved, that the house is a common gaming-house. I think that under these circumstances it is not at all unnatural or unreasonable or contrary to known principles of law to admit what is found in the search as evidence of the facts that the house is a common gaming-house, and that the persons found there were there for the purpose of gaming. As pointed out by the learned Advocate-General, there is nothing said in the law about presumption, but is it not a fact that even under the law of evidence there is a presumption—not only evidence, but presumption—raised against a man in whose house a certain thing is found which had been stolen from another man's house. The law says he must be presumed to be the thief or the receiver of stolen property, and the onus is shifted to the accused. There the law is as strong as in this case. Suppose we see a man coming out of a liquor shop with a bottle under his arm, nobody would think it unfair to presume that he had been there to have a drink. Therefore there is nothing unreasonable in these sections. They simply say that these things shall be evidence, not conclusive evidence, but they shall be evidence only. They do not go the length of specifying what will be the weight of that evidence. It may not be worth the paper upon which it is recorded when other surrounding circumstances are taken into consideration. Admitting for the sake of argument that it is a section which lays down something which is opposed to the general principles of law, I do not understand upon what ground an exception should be claimed in favor of rain-gambling only. If the principle is wrong, it ought not to apply to any sort of gambling; but, as has been pointed out by the learned Advocate-General, we have arrived at a certain stage of legislation, having gone a certain distance and laid down certain accepted principles of law, we ought not to go back; and if we ought not to go back absolutely and entirely, the Hon'ble Mover of the amendment has not made out a case why exemption should be claimed in favour of rain-gambling, unless it be on the ground that it is a new offence. If it is new to this Council it is old to this town, it having existed here for the last 60 years. Under these circumstances I do not think this amendment should be allowed. It has been said by the Hon'ble Mover of the amendment that it would have been a partial mitigation of the severity of the law if the person who gave the information were subjected to cross-examination at a subsequent stage of the proceedings, but I submit that in such a case it would be almost useless to expect information of this kind to be given. And after all what is found is only to be used as evidence; therefore, if any precautions should be taken, they should be taken before the initial proceedings are entered upon, and it is on this ground that I say that the Mufussal Act should be modified so as to put it in conformity with the Calcutta Act, which requires the information to be given on oath."

The Hon'ble BABU GURU PROSHAD SEN said:—"The hardship in the present case lies in the fact that after the search is made if anything is found there, cards and things of that kind, a clock or a register of bets, the case for the prosecution is complete against all-comers. It is true that the accused is allowed to prove the contrary, but the accused can only prove his innocence by bringing forward the persons who were present there, but those very persons are laid hold of as offenders as being present in a common gaming-house for the purpose of gaming. I think under the circumstances it is rather hard on the accused to be called upon to prove his innocence. I can well understand that there may be certain cases of emergency when a stringent law like this may be necessary. But I submit that it is not at all necessary in this case. The houses where rain-gambling is carried on are well known and probably will have to be shut up as soon as this Bill is passed. But the section no doubt will be applied to other houses. Moreover a conviction under this clause is not a very light affair. It makes a man a marked man in society for all his life to come as a *juaree*, a gambler, and anything that is calculated, even in the smallest degree, to make our penal laws unworkable by the stringency of their provisions ought not to be enacted. But the further question is whether this particular provision while it remains in the general law of gambling ought to be excluded from the operation of this special law for the suppression of rain-gambling. I submit that because it exists in the general law it is no reason why it should apply to this law, which we are enacting for a special

purpose, and with respect to which this is the opportunity when the people should be safe-guarded from the hands of the police."

The Hon'ble RAI ESHAN CHUNDRA MITTRA BAHADUR said:—"The question is whether this clause should be added to this Bill to safeguard, as it is said, the liberties of the people. If we admit that this rain-gambling is a nuisance, and a public nuisance, I do not see why this public nuisance should be exempted from the laws relating to other kinds of gambling. Has any special case been made out in favour of rain-gambling? We are legislating on a particular subject, and the question is why the provisions of section 6 of Act II of 1867, which has existed for about 30 years, should not be made applicable to this Bill. If it is not to be put into force, we should not legislate at all on the subject of rain-gambling. If the police are not to interfere, let us drop this Bill. But if it is an offence and a nuisance, as it no doubt is, I do not see why it should be exempted from the application of a portion of the general law on the subject. The finding of certain things will only be evidence. It will be for the Magistrate to decide what weight to give to that evidence. No Magistrate would convict simply on the finding by the Police of certain instruments of gaming. I shall certainly vote against the amendment."

The Hon'ble Mr. BOLTON said:—"The Government has introduced this Bill because rain-gambling comes within the spirit of the existing law, and should be treated like other forms of gambling, when carried on in a common gaming-house. Nevertheless, this motion is brought forward in order to make an exception in favour of rain-gambling by repealing, with reference to it, two sections of the existing law against public gaming. In other words, it is proposed to establish a difference between rain-gambling and other forms of gambling, when the very reason for this Bill is that no such difference exists. On this ground alone I submit that the motion should be rejected."

The Hon'ble Mr. A. M. Bose in reply said:—"I confess that I have now to meet the very heavy artillery of the learned Advocate-General. The first remark the learned Advocate-General made was this, that whenever a measure is introduced with reference to some previous Act of the legislature, an attempt is made to upset it [The Hon'ble SIR CHARLES PAUL said:—"I said I have observed it on many occasions; I did not say whenever."] With regard to that I say that if the occasion be such that the experience which has been gained since the time of the previous legislation seems to justify an alteration in the law, such alteration should be made. But curiously enough it so happens in the present case that instead of trying to upset early legislation on the subject, I am really asking the Council to go back to it. If my amendment is opposed to the provisions of the Bengal Council Acts of 1866 and 1867, it is in conformity, as I have pointed out, with the previous legislation of 1857, which rests on the authority of the Government of India itself. Therefore I claim that I stand in regard to this matter, so far as this Province is concerned, on ancient ways, and am further supported by high authority. Then it has been said that my amendment implies want of confidence in the Magistrates. On the contrary, my amendment is based on confidence on the trying officers; all I ask is that the Magistrates should be trusted to exercise the discretion which is vested in them unfettered by any arbitrary rule. What I seek is that it should be left to the discretion of the Magistrate to decide in each case what weight should be attached to the things found, having regard to all the features and circumstances of the case and the value of the thing found, whether it is used exclusively for purposes of gambling or for other purposes. I ask the legislature to trust the Magistrate to decide upon that question. That is the very point of my amendment. It was then said that this provision is, as it were, really the result of necessity. I submit that that has not been shown, nor has there been made even any attempt to do so. If there had been a representation from Howrah that in working their law, which has stood for the last forty years on this footing, some difficulty has been experienced owing to the absence of such a provision, that would have been some proof of the necessity for such legislation; and I submit it is incumbent upon the Government to produce such evidence before the Council is asked to apply the special provisions of section 6 of Act II of 1867 to this Bill. No doubt it may make a

conviction easier. It may be said with regard to the operation of the excise laws that there are often difficulties in the way of conviction. But that cannot be helped. The liberty of the subject ought not to be imperilled because of the existence of difficulties, and some precautions ought to be taken to secure proper evidence. In this connection it is necessary again to refer to the language of the Act of 1867. I say that the insertion in that Act of the words 'until the contrary is made to appear' is not simply for the purpose of making the thing admissible in evidence, but these words at once indicate the meaning of the section to be that there shall be a presumption which is to be rebutted by the accused. Then the last objection which was urged by some Hon'ble Member, it has been said, is this, that my amendment would introduce a bit of special legislation. Has any reason been shown, why the offence of rain-gambling should be taken out of the general provisions of the law, or that it should meet with exceptional treatment? I thought that in my opening remarks I had met that objection. The reason why this amendment confines itself to rain-gambling is, as we have been told, that the question of the amendment of the gaming law is not before us; and therefore we cannot introduce an amendment which would alter any portion of the general gaming laws. This objection ought not to apply to my amendment, the form of which is due to the way in which this Bill has been framed. If a complete measure in regard to rain gambling had been introduced, it would not have been necessary for me to move that that section of the general law should not apply. It would have been enough for me to confine myself to the provisions of the Bill itself; but owing to the way in which the Bill has been prepared I cannot touch the provisions of the general gaming law, but can only move as an amendment to this Bill that this particular section shall have no application to offences created under it. With regard to the observations which have fallen from the Hon'ble Mr. Das, I agree with what he said that as the credible information depends only upon the belief of the Magistrate or Superintendent of Police, much weight cannot under the circumstances attach to such evidence.

The Hon'ble THE PRESIDENT said :—"Before putting this amendment I will say one word. The Hon'ble Mr. Bose has made a great deal out of the provisions of the Howrah Act which was passed in 1857, but he ignores the fact that there has not been a single Legislature that has followed the line taken in that Act, and the experience of all countries and all Legislatures shows that a provision of the kind contained in this Bill is absolutely necessary to effectually put down these gambling hells. I have not the least doubt that if this Bill was sent up to the Government of India with this amendment in it, the whole Bill would be vetoed."

The Motion was put and negatived.

The Hon'ble Mr. A. M. Bose moved that the following section be added to the Bill:—

"The accused shall have the right of appeal against any conviction for an offence created by the operation of this Act."

He said :—"I submit that this amendment is not out of order. In enacting a special law or creating a special offence, as we are doing by this Bill, it is I submit on grounds of common sense open to the Legislature creating that offence to lay down any special procedure in regard to its trial or sentence or appeal, should any such provision be deemed desirable by it. Otherwise the whole proceeding might be a mockery or involve grave injustice. And as we should expect, this power is expressly recognised by sections 5 and 404 of the Criminal Procedure Code. On every ground therefore I submit my amendment which is an important one, which seeks to provide a right of appeal in cases of conviction under this Bill, and which, I may observe in passing, is in exact accordance with the provisions of the English law on the subject, is in order and ought to be allowed to be discussed."

The Hon'ble THE PRESIDENT said :—"We are a subordinate Legislature, and the Members of this Council are not entitled to deal with matters which do not come before them in the regular course. I have no authority to restrict the jurisdiction of the Presidency Magistrates or to deal with the law of appeal."

We have only received sanction to amend the law in a specific way, and I am not going to take the risk of allowing a provision like this to be introduced. I therefore rule this amendment to be out of order."

The motion was therefore ruled out of order.

The Hon'ble THE PRESIDENT said:—"I have an amendment to propose myself in the preamble and title of the Bill. I want to propose that the words 'in common gaming-houses' be inserted after the words 'rain gambling' both in the title and preamble. There has been an extraordinary amount of misapprehension about the scope and object of this Bill. It has been said that we are going to put down rain-gambling altogether, but the Hon'ble Member in charge of the Bill distinctly said in his opening speech that we are not entitled to interfere with rain-gambling except so far as it is carried on in a common gaming-house. It is open to all the Marwaris in the place to remain in their own courtyards and have as many of their European friends as they please, and to sit there with all the appurtenances for gambling and bet away till midnight if they like, provided it is not a common gaming-house that is kept for the profit or gain of the persons owning or keeping the house. We do not object to this, we do not interfere with private gambling in any shape or form, nor is it intended that we should do so. It is a great mistake to suppose that the Gambling Acts are Acts passed for the purpose of enforcing morality. It is true that indirectly they are in favour of morality because they put down vice by discouraging people whose profession it is to encourage gambling. But it should be clearly understood that this Bill does not attempt to regulate people's conduct by any moral considerations whatever. It aims simply and solely at a matter of Police, and there is one strong reason why there should be prompt action because of the extent to which the evil has recently been growing. Less than a year ago there was only one such house which was almost entirely frequented by Marwaris, but now there were three of these establishments, to which great additions have been made, and if this Bill is not passed, their numbers will no doubt multiply. It pays the owners or keepers of these houses not only to employ female touts to enter *zananas* and induce *pardah-nishin* ladies to bet, but it pays them also to keep men to go to merchants and bankers' offices and induce the assistants there to gamble upon the rainfall. As I happen to know the practice is extending to great dimensions and the profits are enormous. What this Bill will do is to put a stop to the profession of rain-gambling as it is carried on for the purposes of lucre, and to make such practices illegal is the object of this Bill. I move that the words 'in common gaming-houses' be inserted after the words 'rain gambling' in the title and preamble to the Bill, so that there shall be no misconception as to the object and scope of this Bill."

The Motion was put and agreed to.

The Hon'ble MR. BOLTON moved that the Bill, as settled in Council, be passed.

The Hon'ble MR. WALLIS said:—"Hon'ble Members will have concluded from the note of dissent which I appended to the Report of the Select Committee that I intended to vote against the Bill in its present form. My chief reason for objecting to the Bill is the form in which it has been brought forward. I have on no occasion stated that I was opposed to the ends which are sought to be gained by the Bill, but to the way in which the legislation was being carried out. In Bombay they worked differently. When they found that rain-gambling was growing so as to become a public nuisance, they considered it desirable to consolidate and amend the law for the prevention of gambling in the Presidency of Bombay, and Bombay Act IV of 1887 was amended by Bombay Act I of 1890, as follows:—"Section 2.—In this Act the word 'gaming,' whenever it occurs, shall include wagering. In this Act the expression 'instruments of gaming' includes any article used as a subject or means of gaming." This I submit, Sir, would have been the correct way to have proceeded, instead of introducing an incomplete Act, referring to, and making certain amendments in, other Acts in order to gain the desired end. As, therefore, I have heard

nothing to lead me to change my mind, I must record my vote against the Bill."

The Hon'ble THE PRESIDENT said:—"We adopted the form which this Bill has taken for the very simple reason that we considered the term 'wagering' to be open to many of the objections which in ignorance have been taken to this Bill. Wagering is an indefinite term, and it was thought wiser and better, when we want to suppress common gaming-houses where rain-gambling is carried on, to say so."

The Motion was put and agreed to.

BENGAL FINANCIAL STATEMENT FOR 1897-98.

The Hon'ble Mr. RISLEY moved for the discussion of the Bengal Financial Statement of 1897-98.

The Hon'ble BABU SURENDRANATH BANERJEE said:—"I desire to make a few observations with reference to the Budget which the Members of this Council have had only one week's time to study. I regret I am not in a position to renew my felicitations to the Hon'ble Member in charge of the Financial Department in regard to this Budget. It is a difficult matter to frame a good and hopeful Budget at a time of pestilence and famine, and unfortunately the position has been somewhat complicated by the adjustments in connection with the recent Provincial Contract. The last Provincial Contract came to an end on the 31st March, 1896, and the new contract began to run from the 1st April, 1897. Under the terms of this contract, which is referred to in the Financial Statement, the Government of Bengal loses yearly a revenue to the extent of $12\frac{1}{2}$ lakhs, the details of which are given in the lucid statement of the Financial Member. A most improveable source of revenue has been taken away from us. Under the last contract, the Bengal Government used to keep one-half of the net earnings of the Eastern Bengal Railway. Our share was 44 lakhs, and the whole of this revenue has been taken away from us, and we get instead one quarter of the Excise revenues. We lose 44 lakhs, we get in return 33 lakhs; therefore we lose about 11 lakhs. But we lose something more. As we get the income derived from a quarter of the Excise revenue, we have to meet the charges incidental to the administration of that quarter share, which amount to Rs. 1,78,000; therefore we lose to the extent of about $12\frac{1}{2}$ lakhs a year, and prospectively more. This is a result which is doubly disastrous to the province at a time like this. We stand face to face with the terrible prospect of a great plague. I hope it may never break out here, but should it break out, I am afraid the resources of the municipalities will not suffice to cope with that calamity. If you look at the finances of the Calcutta Municipality you will find that its revenues come up to about 44 or 45 lakhs a year; the revenues of all the other municipalities in Bengal amount to 41 lakhs a year. The revenues of all the municipalities put together thus come up to about 100 lakhs, and they are burdened with multifarious charges, and it will be impossible to set free portions of the municipal reserve to meet a great plague. Therefore a subsidy will have to be made from the revenues of the Provincial Government, and that at a time when the resources of that Government are strained to the utmost.

"With regard to the Famine, I congratulate the Government upon the earnest and sympathetic efforts made to cope with it. The estimated expenses in Bengal under the head of famine are large, a little more than 100 lakhs, of which, roughly speaking, 70 lakhs are to be provided by the Imperial Government, because it has provided itself with a Famine Insurance Fund. Of the rest, 22 lakhs are to be provided by the Provincial Government, 8 lakhs by local funds, and to this must be added 25 lakhs provided by the Famine Relief Committee which are to be devoted to lessening the sufferings of those who do not come within the operations of the Government relief works.

"These are temporary visitations. But we have permanent wants which have to be met, and the most pressing of these is undoubtedly the supply of water for the rural tracts in Bengal. The Government have introduced into this Council a Bill to provide Bengal with an adequate supply of water; it has been referred to a Select Committee, but nothing has been done since. It is a measure of permissive taxation; but in order that it should prove a success, it must be supported by a powerful body of public sentiment. We have before us an instance of the failure of permissive legislation. The Drainage Bill was passed through this Council amid the unanimous protest of the non-official members. It has proved a dead letter, because public sentiment is opposed to it, and I have no hesitation in saying that public sentiment would be opposed to any scheme of permissive taxation for the supply of water, unless the people are convinced that the Imperial Government has done adequate justice to the Provincial revenues.

"It cannot be said that we have been completely taken by surprise by the new Provincial Contract. The history of the Provincial Contract in Bengal is one long story of public disappointment. It will be in the recollection of Hon'ble Members of this Council who have taken an interest in the matter that under the Provincial Contract of 1877 three most improveable sources of revenue were made over to us subject to the payment of certain specified sums, viz., Stamps, Excise, and Registration. These revenues increased from 1877 to 1882 from 185 lakhs to 213 lakhs. They improved to the extent of some thing like 48 lakhs. But these favourable conditions were associated with certain burdens. The province was made responsible for certain public works committed to its care by the Government of India. The Public Works Cess was now levied to meet the charges incidental to this arrangement. The Public Works Cess now produces about 41 lakhs a year. When the contract of 1877 expired and a fresh contract was entered into in 1882, the Public Works Cess was continued, but a change for the worse was made in the terms of the contract. The three sources of revenue to which I have referred were taken away to the extent of one-half share of their proceeds. Under the contract of 1877 the proceeds of these revenues were made over to us subject to the payment of certain definite sums to the Government of India. Under the contract of 1882 a half share of these revenues was only given to the Provincial Government, the Government of India appropriating the other half. And the result of this was the contraction of administrative resources to an extent such as crippled administrative reform. Sir Rivers Thompson found himself in this situation. Schemes of improvement which he had planned had to be abandoned, one of these upon which he had set his mind being the extension of education. He wanted to give effect to the recommendations of the Education Commission, and he told the Government of India that it was his intention to devote to education an additional sum of Rs. 1,50,000 a year. But, in consequence of the narrowness of his resources, he was prevented from carrying out his policy in this respect. Then he appointed a Salaries Commission. The Resolution appointing that Commission distinctly laid down the proposition that the salaries of the ministerial servants of the Government were inadequate, and doubly inadequate, having regard to the rise on the prices of food-grains. That Commission consisted among others of the Hon'ble Mr. Grimley as President and the Hon'ble Rai Durga Gati Banerjee—two distinguished members of this Council; and they recommended that the salaries of the ministerial servants of the Government should be increased by at least 75 per cent. I am quite sure that if, instead of the contract of 1882, we had the contract of 1877, the recommendations of the Salaries Commission would have been given effect to. I desire once again to make an appeal on behalf of the ministerial servants of the Government which I have so often made from my place in Council. I cordially acknowledge that concessions have been made involving an expenditure to the extent of more than Rs. 50,000 a year, but I do not think that this is sufficient. It is hardly fair that the highly-paid officers of the Government should be given compensation allowance in consequence of a fall in the rate of exchange, but that these poor ministerial servants of the Government should be placed in positions of trust, exposed to tempta-

tions to abuse that trust and at the same time draw a miserable pay. It is not fair to them that they should be given salaries which are far below what they have a right to expect.

"Coming to the estimates in the Financial Statment, I find that the expenditure under the head of Courts of Justice has decreased by nearly Rs. 40,000. The Government—I will not say the Bengal Government—make a handsome profit out of what has been described as the sale of public justices and I think it is a matter of the highest importance that a portion of the proceeds should be devoted to the improvement and strengthening of the institution, which administer justice and which secure the gratitude and the loyalty of the people. My hon'ble friend Mr. Finucane has eloquently referred to the feeling of reverence which surrounds the Courts of this Province. I think it is a matter of the first importance that that feeling should be strengthened by strengthening the subordinate judiciary and adding to the number of Munsifs. The number of Munsifs is inadequate to cope with the work. We have been furnished with statistics by the Government and explanations have been given with regard to those statistics. They may satisfy my hon'ble friends who have given us those statistics, but I am bound to say that they do not satisfy the public. Organs of public opinion holding diametrically opposite views are at one in holding that the subordinate judiciary is undermanned. A friend of mine instituted a case before the Munsif at Sealdah about the middle of February last; to-day is the 3rd of April, and the case has not come on yet for the first hearing, and he has no idea when it will come on. There are hundreds and thousands of people who have similar grievances. I earnestly hope something will be done to strengthen the subordinate judicial staff.

"I find that the Hon'ble Member has provided Rs. 40,000 for the residences of Munsifs. I should like to know how many buildings have been taken in hand, how many have been completed, and in what parts of the country. I find at page 6 that Rs. 20,000 has been provided for building a house for the District Superintendent of Police at Noakhali. Is it customary to provide buildings for District Superintendents of Police? If not, why was this special concession made.

"I desire to point out that the grant for education has not been what it might have been. In 1896-97 the revised estimate showed that the Government were not able to spend the amount which was provided, and I find further that the estimates for 1897-98 provide less for expenditure on education than did the estimates for 1896-97; and I find the following explanation given at page 5:— 'The reduction in the revised estimate is owing to the grant for electric apparatus for the Civil Engineering College at Sibpur not having been fully utilised, and partly to savings from the grant for the Normal Training School.' May I enquire why the grant was not utilized, and why savings were made?

"I wish to refer to the circular issued by Your Honour's Government to various District Boards, enjoining upon them the propriety of devoting the whole of the proceeds of the Road Cess to the improvement of roads and communications. This is a circular which is likely to prove disastrous to the educational interests of this Province. Up to this time the proceeds of the Road Cess used to be devoted to the maintenance of roads and a portion to education; but as the Road Cess is now being exclusively spent on roads and communications, the educational grant is derived from pounds and ferries and certain Government grants which are made. I hold in my hand a Resolution of the Government on the report of the working of the District Boards in Bengal. I find from the figures in this report that for the last six or seven years the revenues from pounds and ferries have practically been inelastic and unexpansive so far as the Presidency Division is concerned, and further the grants which the Government has made to the District Boards for the purposes of education have been practically stationary. Therefore the result has been that in the Khulna district one or two schools have had to be abolished, and in Krishnagar they were saved from this situation by the timely resignation of a Sub-Inspector of Schools. I desire to refer to the reports of two Divisional Commissioners, Mr. Bourdillon and Mr. R. C. Dutt, both of

whom have been Members of this Council. They are of opinion that the circular to which I have referred will prove highly injurious to the cause of education. Having regard to the sympathetic attitude of the Government in connection with the question of education, I hope and trust Your Honour will place the District Boards in such a position that they will find themselves able to foster and promote the cause of education in the rural tracts within their jurisdiction."

The Hon'ble MR. A. M. BOSE said:—"I have one observation to add to what has fallen from my hon'ble friend with regard to the Provincial Contract. Not only is it that in the place of the larger and more improvable sources of revenue have been substituted smaller and less improveable amounts; but, Sir, I cannot congratulate Your Honour's Government upon the fact that its financial prosperity and well-being, its capacity to carry out the many and much-needed works of improvement are now more intimately connected than hitherto has been the case with the growth and expansion of the excise revenue of the Province. I recognise that we meet under the shadow of a great calamity, and it is only natural to assign in the financial arrangements of the year a foremost position to the question of famine relief. I recognise also that this is not a very proper moment to press upon the attention of the Government questions of policy which will involve a large addition to the expenditure. I shall not, therefore, go over the ground that my hon'ble friend who has just spoken went over both on this and upon a previous occasion, or take up certain other matters which might otherwise have well claimed our attention in this debate. I will only join him in one expression of regret that it has been found necessary to place the grant for education at a smaller figure this year than in the last, and that it should have been found necessary, I will not say to force, but to enjoin upon District Boards a policy which will interfere with the needs of education. I rise chiefly to press upon the attention of the Government a matter, not of financial policy, but I was almost going to say of financial honesty, in regard to which some questions were asked in the course of the last session, the subject, namely, of the unfair and excessive charges which are thrown upon District Boards on account of the collection of the road-cess; and that is almost the only matter which I intend to refer to. The history of the matter, as it has been given in the replies of the Financial Secretary, is shortly this. The question was fully considered in 1878-79, when a certain principle of division as regards collection charges was adopted by the Government. The District Boards, having regard to the fact that the collections for public works cess which went to Government were rather greater than those for road-cess, wanted that half the collection charges should be met by the Government, the same agency being employed for both. But the Board of Revenue pointed out that, in addition to the collecting agency, a portion of the time of a Deputy Collector and of the Collector had to be devoted to the work; and, having regard to this fact, they recommended that one-third of the total collection charges should be borne by the Government and two-thirds by the District Boards. The Government was pleased to accept that principle, and accordingly a certain amount was then fixed as due from the Government to the District Boards for the collection of these provincial rates. In 1879, speaking in round numbers, the total amount of charges for collecting both the cesses was about Rs. 1,61,000, and instead of one-third, or about Rs. 54,000, the amount actually paid, Rs. 44,000, was short by Rs. 10,000. But the strangest part of the matter is that although since then the collection charges have been steadily increasing until in 1894-95—they were Rs. 2,87,186,—yet the contribution from the Government has all along stood at the same figure of Rs. 44,000, the net result being that, whereas the Government ought to have contributed something like Rs. 96,000, it was contributing only Rs. 44,500, or less by about Rs. 51,500 than the amount which ought to have been contributed by it to the funds of the District Boards. I wish in this connection to draw the attention of the Council referring to this matter—the passage in the statement (page 5, paragraph 21) where, it is said that, "in view of the diminished resources of the Government, it is uncertain whether the change contemplated will not have to be deferred, at any rate for the present," namely,

to give to the District Boards really what is due to them. I would make a strong appeal to the Government not to defer the commencement of this equitable policy. I shall not now raise any question of restitution on account of overcharge in the past—probably at some more favourable moment the Government might be pleased to make over some of the payment which is really due to the District Boards; but at any rate, as regards the commencement of a fair adjustment of charges in accordance with the admitted principle laid down by the Government itself so far back as 1878, I ask that it may not be delayed. I am sure the Members of the Council will agree with me that the present state of things ought not to be allowed to continue for a single moment. The District Boards have large demands upon their resources for water-supply, sanitation, and various other demands are constantly springing up; and if the argument derived from the present financial difficulties of the Provincial Government be urged, I venture to say that the District Boards also are in the same position. The scarcity which has injuriously affected the revenues of the Government will also affect the income of the District Boards and throw extra burden on that income; therefore I hope that an additional annual payment of about Rs. 50,000 to the District Boards, demanded a like by considerations of justice and generosity, will be made without delay. In the matter of agriculture, I beg to observe that last year reference was made in the budget to a certain allotment (Rs. 10,000, to promote the establishment of an agricultural class at Sibpur. I shall be glad now to learn what progress has been made in that direction and what is the present position of the matter. I trust we shall have a statement of a reassuring character, such as will enable the Council to see that the matter has not been slept over. The present scarcity brings into prominence the question of the establishment of agricultural classes, not only with the object of giving the people the benefit of an agricultural education, but also that they may be able by the raising of additional crops to tide over times of difficulty. I would also appeal to the Government to see what steps may be taken for the establishment of agricultural banks. I will read to the Council a passage from a letter which I have received from a gentleman occupying a high and responsible position in Chota Nagpur, earnestly advocating the establishment of such banks to save the ignorant and helpless people there from the grinding exactions of the village grain and money-lenders. (Passage read).

“It is not necessary for me to say anything with regard to the condition of the people of Chota Nagpur in the presence of the Hon’ble Mr. Grimley. I will only add that the state of things depicted in this letter is not confined to that division, but may be met with elsewhere also. I trust it will be possible for the Government to establish these banks, or at any rate to institute inquiries with the object of encouraging their establishment, so as to enable these unfortunate people to free themselves from the hands of rapacious and unscrupulous usurers. I hope the Government will earn their gratitude by helping to make lighter the burdens they have to bear and add a little brightness to their hard existence, because it is on the contentment and well-being of the people rests the surest foundation of the prosperity of the Government.”

The Hon’ble Mr. WALLIS said:—“Sir,—With your permission I would like to make a few remarks on the Financial Statement now under consideration. I am aware that the Members of this Council, when speaking on the Financial Statement, will have to use the greatest caution to avoid criticising the principles of the Provincial Contract on which we have just entered; but, Sir, we have been compelled to accept a revision of the Contract of 1892—97 on lines so disastrous to the financial prospects of the province over which your Honour rules, that you will perhaps treat the Members of your Council leniently should they at any point overstep the bounds of reference, and tread on the forbidden ground of criticism. The year which the Financial Statement reviews opened with the brightest prospects, the closing balance being estimated at Rs. 34,40,000, the revised estimate raising it to Rs. 41,07,000. This vast improvement, we are told, is mainly due to an increase in the provincial share of the net earnings of the Eastern Bengal State Railway, an ever-increasing source of income, now unfortunately lost to the Bengal Government; but, Sir, the Financial Secretary is also to be congratulated on being able to show an increase of nearly Rs. 16,00,000 under

various other headings, all of which assisted in making up the closing balance to the amount named, Rs. 41,07,000. There are, however, two heads of receipts under which I would like to make a few remarks, and they are the excess revenue obtained from Forests and Jails. These show a net improvement during 1896-97 over the actuals of 1895-93 of Rs. 1,62,000 for the former and Rs. 50,000 for the latter. We are told that the improvement under the head of Forests is due to contracts undertaken by the Department for the supply of railway sleepers to the Rai Bareilly-Benares Railway. This is, I fear, one of those cases in which the Government step in and compete with private enterprise to the undoubted loss of the latter, for it is hopeless for the private individual, however great his resources may be, to work on the same terms as the Government, who in this particular case stands very much in the position of the producer retailing his goods, instead of working through the wholesale buyer. It may be that the contract under reference is the only one in existence at the present time, but does that justify its existence? I think not; for what the private contractor has to fear is the extent to which such transactions might be carried on by the Government. The private contractor finds a new competitor has entered the field against him, an opponent possessed of unlimited capital, who can perfectly well carry on his business, regardless of the laws which must govern his action, for the private individual has to see that each particular venture he embarks on is worked to a profit. It has been shown that the existing contract with the Rai Bareilly-Benares Railway has proved a profitable speculation to Government. I respectfully submit that the timber should be sold to the contractor direct from the forests, and he, in turn, should retail it to the Railway. This is a question which might be enlarged upon to any extent, but it is not my intention to take up the time of Hon'ble Members. I would only desire to mention that it is the principle to which I respectfully invite the attention of the Bengal Government. I now come to the question of the extra revenue obtained from jails. This is shown to be about Rs. 50,000, and is due to the supply of police clothing by the Jail Department. Here we have an excellent means for the employment of jail labour, and I would venture to suggest that the energies of those in control should be directed towards this legitimate means of increasing the revenue of jails, and in doing this I would desire to make a few remarks on the more general question of jail manufactures. In bringing this question before this Council, I am compelled to refer back to an exhaustive Resolution of the Government of India on this subject, dated 22nd September 1882. This Resolution clearly and fully restricts the production of jail manufactures to avoid their proving a hindrance to the growth of indigenous industries, or be brought into unfair competition with the products of private capital and of free labour. The history of the whole case is a very long one, and the Association to which I belong has considered it expedient on several occasions to address Government on the subject; but I trust Hon'ble Members will excuse my taking up a little of their time by making a passing reference to the question. Those who are interested in trade in India do not, for one moment, wish to deprecate the desirability of utilising convict labour, but they do respectfully protest against the production of the jails being offered retail to the public and at prices which cannot be touched by the private producer; but I will come to that point later on. I would now quote portions of the Resolution to which I have referred and which might be made to apply equally to the question of contracts for sleepers as to jail administration. [The speaker then read several quotations from the Government Resolution of the 22nd September 1882.] This, Sir, is all that can be expected. That sales of jail produce to consumers among the outside public ought to be discouraged, the jails dealing direct, as a rule, only with traders, wholesale or retail; and I may venture to add that on no account should dépôts be continued for the retail sale to private individuals of articles of jail manufactures, varying from a table serviette to a rocking chair, from a foot-rug to a drawing-room carpet, at rates which defy private competition. This question I feel the greatest confidence in leaving in Your Honour's hands.

"So much for my remarks on the past year's accounts; it now remains for me to refer to the estimated accounts for the year 1897-98. This period, but for the demand on our resources for Famine Relief and the immediate loss which will accrue from the new Bengal Contract of 12½ lakhs, would have

closed with a credit of about 44½ lakhs. This brings me to the question of Provincial Reserve Funds, and the undesirability of accumulating large balances. I have seen a Resolution of the Government of India, No. 318, of the 17th January 1882, which refers to this question very pointedly. It reads as follows:—

“Moreover, as a consequence of the new principles laid down in the Resolution of 30th September last, and of the separate provision in the Imperial Budget of a permanent annual allotment of one crore and-a-half of rupees for Famine Relief and Insurance, the Local Governments, while always needing a moderate reserve over and above the mere ‘working balance’ of sufficient amount to meet scarcity and distress, not indisputably amounting to severe famine, or other temporary exigencies, will no longer find it necessary to accumulate a great Provincial reserve fund, out of which the demands of severe famine could, in future, be largely met. His Excellency in Council is of opinion that, subject to the moderate reserve just referred to, the provincial resources can be best utilised by being invested to the full, from year to year, in works of a productive or protective character.”

Towards the middle of last year your Honour recognised that the Provincial Funds had a credit balance of 21 lakhs, and possibly with above Resolution in view, you immediately took in hand one of the most noble schemes which you could have devised to inaugurate your rule over this Province, namely, the structural needs of the European General Hospital. The Resolution No. 314 T.M., of the 13th June 1896, appointing a most influential Committee, with the Honble Mr. Risley as President and Mr. W. Banks Gwyther as Secretary, to consider and report on the whole question, was hailed with the utmost satisfaction by the general public, and it is a great misfortune that the financial horizon suddenly became overcast, the Province was threatened with famine, and the Government of India enjoined the observance of the strictest economy, and the Provincial balance of 21 lakhs had to be held in reserve to meet other expenditure of an urgent character.

“Thus, Sir, the funds which, I take it, you had intended to devote to the benevolent object named, have been diverted to other channels, but we learn that you will continue to press upon the Government of India the gradual reconstruction of the Presidency General Hospital on the lines suggested by the Committee, and also that other necessary medical reforms in Calcutta will be undertaken as soon as money can be found. You also expressed a hope that the Provincial Contract, then under consideration, might possibly provide funds for the completion of a large portion of the work within the next five years. Your Honour has already commented on the disappointment which has been occasioned by the terms of the new contract; and as the conditions entail an immediate loss in the first year of some 12½ lakhs, it is to be feared that the Provincial Funds will not, for some time to come, be able to bear the strain which would be put upon them for the completion of the scheme. I am sure, Sir, every Member of this Council joins with you in the hope that the Government of India may, when more settled times come, see their way to restore to Bengal some portion of the contribution which we are now called upon to meet. We have an excellent example of this having been done in the past under a Resolution, No. 3353, of the 20th September 1881, of the Government of India, Department of Finance and Commerce, paragraph 9. This Resolution, after discussing at great length the responsibilities of Provincial Governments in times of severe famine, &c., decided that it was desirable to restore to Provincial Governments certain contributions amounting to some 67 lakhs which they had made to the Imperial Government. This was actually done under a subsequent Resolution, No. 318, of 17th January 1882, so that we may hope with some degree of confidence that at no distant date the Supreme Government may take the question into consideration and decide on making the refund.”

The Hon'ble MAHARAJA BAHADUR SIR RAVANESHWAR PROSHAD SINGH, K.C.I.E. of Gidhaur said:—“I do not wish to detain the Council by any lengthy remarks. I wish with your Honour's permission to make certain observations in as few words as I possibly can. Before I proceed with my observations, I have to congratulate the Hon'ble Member the Financial Secretary to the Government for the very successful budget he has been able to produce in this year of exceptional difficulties. It is indeed a matter of great satisfaction to find that notwithstanding the heavy expenses required for the prevailing famine in Bihar,

there has not been such curtailment of allotments on the education and other improvements as would retard the progress of the country. I observe with special satisfaction that an allotment of Rs. 12,000 has been made for the Bihar School of Engineering. The Government were pleased last year to announce its intention of opening an agricultural class at Sibpur. The people of Bihar would be especially thankful to the generous enlightened ruler of Bengal if he could see his way to establish an agricultural school in Bihar next year, which, I hope, would be a year of prosperity. I wish the Government could see its way not to reduce the allotment for grants-in-aid to schools. This may work to the prejudice of primary schools and schools in general. I find that out of 27 lakhs and odd budgeted for education, Rs. 3,39,000 are for inspection and Rs. 66,000 for direction, *i.e.*, one-eighth of the entire amount to be spent on education is to be spent on inspection. The proportion seems to me a little too high. I am aware of the difficulties of making any savings here. But I cannot help wishing that the grant-in-aid of Rs. 5,93,000 could be raised at least to the figure spent last year by making saving somewhere else. It is worthy of notice that the reduction of Rs. 30,000 made in the budget under education this year, as compared with the budget of last year, a reduction of Rs. 27,000 has been made only in allotments under grant-in-aid. I find that a sum of Rs. 20,000 has been allotted for the construction of a residence for the District Superintendent of Police at Noakhally. I am not aware whether the Government provides District Superintendents with residences in other districts. There must have been some special reason for making this allotment, but I cannot help observing that in my district a very good and comfortable bungalow may be made for Rs. 10,000, and I do not know why the same amount would not be sufficient at Noakhally. I also find a sum of Rs. 25,000 allotted for the construction of a parsonage. I don't find any other item of expenditure for ecclesiastical purposes in our provincial budget, and this has made me doubtful whether the item is properly there. The Subordinate Judicial Service has special reasons to be thankful to His Honour for the allotment of Rs. 40,000 for the residences of munsifs. The present Government is not one that is slow to remove a grievance when it is brought to its notice. By making the residence for munsifs, it would remove a long-standing grievance for a most deserving and hard-working class of officers and would earn their gratitude."

The Hon'ble MR. M. S. DAS said:—"During the discussions on the Budget last year, I suggested the importance and the necessity of appropriating a portion at least of the educational grant to schools where agriculture would be taught in a primary form. My suggestions had some support from His Honour the present Lieutenant-Governor, who remarked that he had seen the experiment tried satisfactorily in the Central Provinces; I therefore expected that in the present Budget some provision would be made for giving an agricultural training in primary schools, but I regret to say that I do not find any provision made for this purpose. No doubt this is a year in which the Financial Secretary must have found it very difficult to make allotments for educational purposes; in fact he ought to be congratulated for the successful manner in which he has adjusted the revenues of the Province, and provided for the monstrous calamity of famine without trenching upon the grant for education to such an extent as to be detrimental to the department. But I maintain that in a year of famine any outlay for the promotion of agriculture would not be out of place. Prevention is better than cure, and therefore by educating the people in the art of agricultural, though we shall not be able to avert famines by commanding rainfall in proper season, it will enable the people to know what crops they can grow in a season when the rainfall is scanty. This is very desirable because the peculiarity of agriculture in this country is that the people move about in the old groove and have the same crops from year to year irrespective of the vicissitudes of season. I do not wish to take up any further time; I shall therefore only express the hope that the Hon'ble the Financial Secretary will be able to find something out of the resources at his command for this most important item of expenditure."

The Hon'ble BABU GURU PROSHAD SEN said:—"In spite of the persuasive and eloquent speech of the Hon'ble Financial Secretary of the Government of

Bengal to the contrary, I still maintain that the discussion on the budget in the Bengal Council is of the most academic character and perfectly useless for any practical purpose whatsoever, and I am confirmed in this opinion by what was said the other day in reply to a question of my hon'ble friend Babu Surendranath Banerjee. It was this, that "under the orders of the Government of India, the Financial Statement of a Local Government cannot be presented to, or discussed by, the Local Legislative Council, until it has received the sanction of the Government of India." Holding the opinion I do, I shall be very sorry indeed to criticise a budget for which the Bengal Government is not at all responsible, and the exceptional character of which, perhaps for the present, has been partly forced by circumstances, over which man has no control. But, Sir, on the present occasion, in connection with the Provincial Budget, we, the non-official members of this Council, have a duty to perform. It is to offer His Honour the Lieutenant-Governor our humble but heart-felt thanks and our tribute of admiration for the care he takes for the defence of the interests of our Provincial Revenues. If money, they say, is the sinews of war, it is no less true that it is the means alone by which administrative reforms are possible. The Government of Bengal, Sir, are entrusted with the care of the administration of the Government of this vast province in all its details, excepting its protection from outside and its communication inside and outside by Railways, Telegraphs and Post Offices, branches which are in the Imperial Budget called "Commercial." Therefore, Sir, in the treatment we receive in this matter, lie the progress and prosperity of the teeming millions of Bengal, comprising nearly a third of the population of this vast Indian Empire.

"Their contribution as taxes amount to more than a third of the principal Heads of General Revenues of India, if you were to give them credit for the revenue derived from opium, got out of poppy grown in their soil or more than a fourth, if no such credit were to be given.

"And the Provincial Revenue which my hon'ble friend shows on the Receipt side, and which every one will allow, he has husbanded to the best of his ability in the budget before us, comes up to only three crores and odd (i.e.) barely a fourth of what Bengal contributes in a year.

"Sir, our Stamp Revenue alone comes up to 174 lakhs. It keeps on developing by some lakhs even in this year of famine, and it would cover, with its receipts, our expenditure for Administration, for Maintaining Courts, Civil and Criminal, including the High Court, for Police, and for Jails.

Thus, Receipts—Stamps	...	174 lakhs.
Courts of law	...	8½ "
Jails	...	8½ "
Police	...	2 "
Total	...	193 "

Expenditures—Administration	...	17½ lakhs.
Courts of law	...	89½ "
Jails	...	22 "
Police	...	61 "
Total	...	190 "

"Our Excise Revenue, our Assessed Taxes, our Custom Revenues, our Provincial rates and the receipt on all our minor Heads of Revenue remain unaffected by the great calamity that has overspread the land.

"Our Land Revenue collections stand where they always stood unaffected by the vicissitudes of the season, and why, because we have here a Permanent Settlement.

"Again, Sir, of all our Railways the East Bengal State Railways paid best during the year, and why, because our Permanent Settlement renders our land system certain, and secures to our raiyats almost all the advantages of a profitable cultivation.

"But if we pay, we require our people to be educated, we require hundred and one administrative reforms to be introduced, and we want healthy checks introduced in the abnormal growths of some of our Revenue Heads, conspicuously the Excise and the Stamps, which I respectfully submit indicate growing drunkenness and litigiousness amongst my people.

"I shan't repeat what I said on these subjects last year. In 1883-84 when the outstill and distilleries contributed only 48 lakhs, it was declared in the Resolution appointing the Excise Commission that there was a serious increase in drinking, and Government in appointing that Commission declared that no consideration of Revenue can be allowed to outweigh the paramount duty of Government to prevent the spread of intemperance, so far as it may be possible to do so. The Excise Commission suggested some changes; these suggestions or at least some of them were adopted, and with their adoption the development of the Excise Revenue received a check.

"These checks have since been removed one by one, and the only recommendation now adhered to is the establishment of some distilleries, and some local option in the matter of selection of sites.

"Simultaneously with the withdrawal of the checks recommended by the Excise Commission, we have increased consumption and increased revenue.

"The outstill and distillery revenue stood at 59 lakhs last year. It is more than 60 lakhs this year.

"I was told last year that the increased Excise Revenue indicates prosperity of our people; that I should have congratulated the country and the Financial Secretary on this result. One has only to await to gather experience. This is a year of famine, and the expansion of our Excise Revenue in spite of famine is all the same, and the pet theory of explaining away increased Excise Revenue, by referring it to prosperity as its cause, must now have to be given up. If it indicates anything, it indicates that the habit is being rooted in our people, and that what used to maintain our pauper population without any Poor laws in the land, now go to the liquor-shops. It is a matter which ought to engage the attention of those who are entrusted with the care of our people.

"Then, again, I find, in the latest Excise Report in hand, that a fresh experiment is now being tried at Gaya. The department, throwing aside the recommendation of the Excise Commission, with regard to the fixing of a minimum price for outstill liquor (4 to 6 pice a bottle), is now trying to introduce a system of maximum price for distillery liquor, and that so low as 7 Gorukpuri pice, equal to 4½ pice a bottle.

"I hope the Government will not allow this system of cheapening liquor to go on notwithstanding any report that the result was proving successful at Gaya, for the inevitable result will be to cheapen distillery liquor to a degree to which even the outstill liquors have not ever reached.

"Already in the district of Gaya country spirits brought in more money on the introduction of this rule, than has been the case for many years before this.

"I am afraid I was misunderstood last year with respect to what I said about the abnormal growth of our Stamp Revenue—what I meant to say, and I shall maintain even now, that, judging by the latest figures available, more than four-fifths of the litigation in our Courts are those in which our poor people (90 per cent. agricultural raiyats) are interested, and it were well if in the interest of these poor people Panchaiti (Conciliators') Courts were established, the panchaitis to decide without charging Court-fees. A Bill to this effect could be introduced in Council at any moment, if permission was given.

"At any rate, there ought to be some system of refund of Court-fees introduced in cases where cases are decided *ex-parte*, compromised or withdrawn, and the process-fees reduced in some cases.

"Another little matter, on which I like to say a word, is the subject of Assessed Taxes. Sir Charles Elliott said in his last Resolution on the Income-tax, "on the question of popular feeling in regard to the Income-tax there was nothing new to be said. It is necessarily unpopular, but among the classes which are enlightened enough to appreciate the financial position and prospects of the country, the tendency is to recognise it as an unpleasant but inevitable necessity. If the minimum income could be raised to Rs. 1,000, the unpopularity of the tax would be almost entirely removed." His Honour the Lieutenant-Governor has in the present year's Resolution endorsed this view.

"The proceeds of the Income-tax up to minimum of Rs. 1,000 is not much. It is only 10 lakhs out of 49 lakhs to which it has grown, and the growth since its introduction has been about 10 lakhs. This 10 lakhs is paid by 87 thousand assesses out of the present total number of 114 thousand assesses.

"But I feel I am taking up the Council's time for nothing, when the Bengal Government begins the year with a deficit and all the surplus in hand is gone.

"Turning to the Budget figures I find that the receipts amount to 454 lakhs and the estimated expenditure to 485 lakhs for the present year, and if we get on to better times the next year, it will still leave us short of 9 lakhs to produce an equilibrium between our receipts and expenditure, and the only way out of our difficulty will be perhaps to make the utmost of the taxes, the curtailment of which I suggest. This is very disappointing, and I only make these suggestions in the hope that if better times come these subjects should not be lost sight of.

"I am glad, Sir, that, notwithstanding its difficulties, Government has not thought fit to curtail any of our current expenditures under any head: on the contrary, I find a small additional grant under the head Education in the estimate for 1897-98 over the revised estimate for the year 1896-97. The country ought to be thankful to His Honour for this, as formerly under the straitened circumstances of our finance, the expenditure on Education has always been the first to receive the shears. I hope, Sir, the Provincial revenues will come to a point when effect could be given to the recommendations of the Education Commission. It were false economy to curtail our useful expenditures.

"There are only one or two items on the expenditure side on which I like to say a few words.

"The first is head 'Irrigation,' Subject—'Interest on Debt.' The amount is 24 lakhs. This is the amount of charge I have seen for a good many years. It strikes me that with the interest of Government securities at 3 per cent. this amount ought now to be reduced to 18 lakhs.

"I like to be informed if there be any special condition of this loan, under which the loan cannot be paid off or converted. It is specially necessary to do so, as the Irrigation Works have been a heavy drag on our Provincial revenues, and here in this matter we have been spending money, something over 23 lakhs from year to year, to insure ourselves against famine, without, I am sorry, the corresponding result. Take even a circle of 10 short years, when a famine comes, we would have spent on our irrigation canals 2 crores 30 lakhs before the famine year would be reached, and we would be spending two-thirds of the amount that is now estimated for the relief of whole India for the present year, and more than double of what we shall be required to spend for Bengal.

"Another matter for look-out, when this irrigation sits so heavily on the expenditure side of our budget, is whether the working and maintenance charges cannot be reduced. A good deal has been done in this respect by the Superintending Engineer and his divisional staff, for which they have justly merited His Honour's recognition, but I like to be informed whether, when the expense per mile varies from Major Works to Major Works, and in the different divisions of the same Major Works, whether the charges are not susceptible of further reduction. The collection charges of rates are nothing compared to the maintenance and working charges.

"And here permit me to say a passing word regarding the dire calamity we are at present passing through and which has evoked such sympathy throughout the world. India cannot be too grateful for the large sums of money that have been pouring in from England and all her dependencies for charitable relief to our poor people. That calamity has greatly affected a part of His Honour's territories. In that part of the territories under His Honour, distress and scarcity is almost chronic, and it behoves those who have any information to convey to lay it before Government. To me it appears that the classes of persons who come to be affected at every season of drought and distress in Bihar are the *landless* classes, and amongst these the class of Nonias, who were once prosperous as manufactures of saltpetre, and the class of Jhollas, who were once prosperous weavers. Add to this the dependants on agricultural prospects, the class serving on wages in agricultural fields. I believe this number is about 3 to 4 millions.

"I can roughly calculate the Wage Fund in Bihar in prosperous times. The whole, according to my calculation with which I need not trouble the Council, come up to 60 millions of rupees. The result is appalling, for if the whole of the Wages Fund were to be distributed, it would not be more than Rs. 20 a head. In prosperous times an able-bodied man gets for unskilled labour Rs. 3-8 to Rs. 4 a month, a boy able to work Re. 1-8, and a woman Rs. 2. This has been the case as long as the memory of man runneth, and it has not much improved since the time when the Ayeon Akbari was compiled, when the pay of an ordinary groom was 170 to 100 daums = Rs. 4-4 to Rs. 2-8, 40 daums making a rupee. That everyone does not get work even at this low rate is apparent from the fact that you get lots of Umedwars to serve you when you have anything to offer.

"This for prosperous times. You can then well conceive why, with the slightest vicissitudes of season, you have to take the relief of these men in hand. Doubtless it is the great populousness of Bihar that accounts for a great deal of this and some of the social habits of the people with which any Government is powerless to combat. Emigration to other and less congested parts of India would go some way to relieve the congestion, but it appears to me that the best way to insure against famine is to help and encourage the growth of manufactures in this country and to rehabilitate our once prosperous manufacturers on wage funds in their own line.

"I have submitted how we spend 23 lakhs from year to year from our Provincial revenues, to keep up our irrigation works, to insure ourselves against famine. The Bengal Government had to spend a large sum of money in the districts of Muzaffarpur and Darbhanga during the distress season 1892-93, without (I like to be corrected if I am wrong) getting anything from the Famine Insurance Fund, and we have to spend 41 lakhs for 1896-97 and 1897-98 out of the Provincial Fund. We are very grateful for the 70 lakhs we are promised for 1897-98 out of the Famine Insurance Fund; but if we have to provide even in part the famine relief expenditure out of our Provincial revenues, which are allotted for fixed and specific charges, I wonder how long the administrative machinery in Bengal can get on. But whatever views may be taken as to the liabilities of the Provincial revenues to meet relief charges, I submit local revenues raised for specific purposes ought not to be diverted to other purposes. But I am afraid I am trenching on forbidden grounds.

"I find, Sir, we had to contribute 18½ lakhs last year from the Provincial revenues for famine relief, and we are called on to contribute 22 lakhs this year for the same purpose. The local bodies contributed 4½ lakhs last year, and they are called on to contribute 8 lakhs and odds during the present year. The total amounts to something over 52 lakhs. The estimated cost of relief works in charge of Public Works Department alone is 39 lakhs, and relief works in charge of Civil Department is 21½ lakhs. These are large sums, and if devised to excavate tanks, wells and remove silts from the beds of rivers and canals, ought to save large parts of Bengal, at least the districts affected, from water-famine in future. Early in November last year I suggested this in one of my questions, and the Hon'ble Mr. Finucane in reply in December said I understood that this is being done. The famine would leave some good behind, if, with the money now to be spent, every village in the districts affected would get its supply of drinkable water in future.

"With reference to the Local Funds I have yet to say a word. I hope, notwithstanding his difficulties, the Hon'ble Financial Secretary shall be able to make an equitable distribution of the charges of collections between the Road Cess and Public Works Cess, and the charge of re-valuations also. The amount on adjustment shall be found to be about 2 lakhs a year, and not 40 or 50 thousand as he estimates.

"Under head Stationery and Printing, the estimate of expenditure is Rs. 11,34,000 against Rs. 11,00,000 of the revised estimate for the year 1896-97. The charges are thus distributed:—Stationery Office at the Presidency, Rs. 1,54,000; Stationery purchased in the country, Rs. 70,000; Government Presses, Rs. 3,66,000; Printing at private presses, Rs. 1,000; Stationery supplied from Central Stores, Rs. 5,42,000; Refunds, Rs. 1,000. The receipt

under head Stationery and Printing is Rs. 1,34,000 only. I believe Government printing offices now supply printed forms to District Boards and Municipalities at certain rates; private presses could do this cheaper, and, judging by this, I beg to ask whether it has ever been thought expedient to ask private presses to do the Government printing works, at least of forms, and whether they would not do it at cheaper rates than what it now costs Government.

"As for the stationery, the country supply is Rs. 70,000, and the stationery supplied from Central Stores is Rs. 5,42,000. I like to know what kind of things are supplied from the Central Stores, and whether these could not be had in the country. If the Government of Bengal has a free hand in the matter, will my hon'ble friend arrange for getting all his stationery from the country instead of indenting for them from the Central Stores. This will stimulate private enterprises, and I am sure lead to considerable saving under this head.

"I am glad that provision has been made for larger payments under commission to Rural Sub-Registrars and under contingent charges owing to the opening of new offices and the general expansion of the department. This is but doing justice to a department which contributes 8 lakhs to our revenue, of which we share half, and I hope the opportunity shall be taken to introduce some sort of test in the employment of these Rural Sub-Registrars.

"I am sorry not to find my old friend, the Zamindari Dak Cess, which forms a regular impost on land, contributing about 3 lakhs in the Provincial revenues. I still hold that the reason for its imposition no longer exists, but if the impost is to exist, let at least the control of receipt and expenditure be brought under the direct supervision of Government."

But what are the savings of a few lakhs here and there compared to our wants?—and they are grave and many. They are not the fancied grievance of grievance-mongers, but well established by commissions of official experts. We want money to give effect to the recommendations of the Education Commission, the Police Commission, the Salaries Commission; we want money to increase the number of Munsiffs, to better their prospects, and we want money for the purpose of Village Sanitation, and no one knows better than His Honour that we can't pay more, and all our reliance is on our getting justice in the matter of Provincial Revenues.

The Hon'ble RAI ESIAN CHUNDR A MITTRA BAHADUR said:—"After all that has been said I shall only make a few remarks. From the recent Provincial Contract our province has lost 12½ lakhs of rupees, and as the Government has to make provision for the saving of the lives of many thousands of people, it will perhaps be unreasonable to ask the Government to provide for expenditure which has not been provided for in the budget. I know from the budget that our treasury is empty, and knock, as we may, at the gate of the Treasury, the Financial Secretary will say 'you must wait for a year; this is a very bad year, and when we have a better year perhaps some relief may be given.' I appeal for that class of persons for whom my hon'ble friend Babu Surendranath Banerjee has been appealing to-day and has been appealing for the last two or three years; I mean that half-famished class of men, the ministerial officers. From the year 1867 down to the present there have been enquiries and commissions, but nothing substantial has been done to increase their pay. It is not necessary that I should remind your Honour of the labors of the Salaries Commission, but I will call attention to the remarks which were made by the Hon'ble the Financial Secretary on the occasion of the discussion of the last year's Budget. He was pleased to say that the recommendations of the Salaries Commission were not reasonable, but that there was no doubt the cost of living of the ministerial officers of the civil, criminal and revenue courts had increased to the extent of from 13 to 16 per cent., and it was no doubt desirable that some provision should be made for increasing the salaries of these ministerial officers. There is a Process Fees Fund, and from a Financial circular it appears that over and above the actual cost of maintaining the establishment for the service of processes there is a saving of 4½ lakhs. Court-fees are levied to meet the cost of the administration of justice, and I respectfully submit that the proceeds of

these fees should not be diverted from expenditure under the head of the administration of justice to any other head. On the last occasion the Financial Secretary sympathised with the condition of this class of officers, but he regretted to say that even if an increase of $12\frac{1}{2}$ per cent. of their salaries was given, the expenditure would amount to 3 or 4 lakhs, and therefore he could not hold out any hope of its being done. But I would remind your Honour of the moral obligation of Government to pay the ministerial officers adequately. But nothing has been given to this very over-worked class of officers since 1867. And it comes to this, that the salaries of various classes of Judicial Officers, Subordinate Judges, Munsifs, and Deputy Magistrates have been increased, and no doubt for weighty considerations some European Officers of the Government have received exchange compensation, and even the menial servants of the Government have received something; but these unfortunate men have not received a pice since 1867. There is, moreover, a class of unpaid apprentices both in the Courts of Judges and of Munsifs; they work for five years in expectation of getting employment, but if they do not get employment within that period they are turned out. A great portion of the work is done by these apprentices, and they absolutely do not get a farthing from the Government, and I need not say how they live. When a large sum is realised in the shape of court-fees, fees specially realised to meet the expenditure on account of the administration of justice, I say these men have a right to proper remuneration. I would not have risen to address the Council on this occasion on a point on which so much has been said, but for a case which has come to my personal knowledge. The other day a case was decided in Howrah in which a poor woman sued her husband and brother to recover Rs. 800 or Rs. 900 on a mortgage bond. The defence was that the bond was a fabrication. The Munsif went through the case for several days successively, and on appeal the Subordinate Judge heard it for some days, and it was found that the real bond was taken out of Court and a false one was substituted in its place. Such things are sometimes heard of in the mufassal, though I admit they are rare, and the most important thing is that neither the Munsif nor the Subordinate Judge could find out who committed the fraud, and no sanction for prosecution could therefore be given. There are in that Court some apprentices and some half-starved amla. It is for the Council to consider who committed the fraud and whether or not in the name of justice such things should be stopped. In matters other than judicial, the back-bone of the mufassal Courts are the underpaid amla; they get but half salaries, and there are lots of temptations before them. I submit this is a matter which should not be left unconsidered, and that the Government should take some steps to prevent such things occurring. To put it from another point of view—is it dignified on the part of a great Government of which your Honour is the responsible head, to overlook the poor condition of these officers? There is a very stringent circular of the Government against indebtedness by Government servants; the unfortunate people cannot borrow, and still they are required to act honestly and fairly. I submit that they are at least entitled to some consideration during this year. If they are given an addition to their pay of even two annas to the rupee, it will be a great boon to them, and it should be met out of savings from process fees. Then there is another point, namely, the question of water-famine. A large sum is to be spent upon people who are suffering from famine for food-grains. The Government ought also to take into consideration the question of water-famine. The people are suffering from want of water. I differ from my hon'ble friend BABU SURENDRANATH BANERJEE upon the question of permissive legislation. [The Hon'ble BABU SURENDRANATH BANERJEE said:—"I said that the people are not likely to approve of it unless the Supreme Government on its part does what it should."] I say there is room for improvement under this head."

The Hon'ble Mr. FINUCANE said:—"Sir, this seems to be a debate *de omnibus rebus et quibus deum alius*. The Hon'ble Babu Guru Proshad Sen began by saying that it was of an academic character, but upon no supposition can it be said that the Hon'ble Member has tried by his speech to give it a practical bent. In my remarks, which will be brief, I shall only endeavour to answer

the questions which have been put by him and by other Hon'ble Members so far as regards the matters with which I am myself concerned. The Hon'ble Babu Surendranath Banerjee referred in very appreciative terms to the way in which the famine relief administration has been carried on. But he made a mistake. He said the expenditure in Bengal is larger than in other Provinces. The expenditure in the coming year will be larger, but taking the present and the past year, it is not larger than in other Provinces. Questions have been asked about an agricultural class at the Sibpur Engineering College. The position in that respect is this. We have submitted a proposal to the Government of India; sanction has not been definitely received, but the matter has not been lost sight of, and Rs. 10,000 have been provided in the Budget for this purpose. A Conference was held in the course of the year in the office of the Board of Revenue, at which the Hon'ble Mr. Stevens presided, for the purpose of considering the question of improving the system of education in the country generally, so as to make it more practical than it now is, and recommendations have been made. As to the expenditure upon Education, the difference between the amount allotted this year and last year upon Education is very trifling—about Rs. 24,000. The Lieutenant-Governor had intended to provide for a much larger expenditure on primary education,—but on account of the famine we have only been able to keep it as it was last year. The Hon'ble Mr. Bose made some remarks upon the establishment of agricultural banks by Government in Chota Nagpur; that is a large question which has often been considered in different parts of India. The difficulties in the way are exceedingly great, and nothing can, I fear, be done in this direction. [The Hon'ble Mr. GIMLEY said:—"There is an old bank existing in Chota Nagpur, which was got up by the Natives."] But not a Government Bank. Then with regard to Forests. The question of the supply of sleepers for Railways has formed the subject of some correspondence. The Chamber of Commerce objected to the Forest Department supplying sleepers for Government Railways. The question was referred to the Government of India, and that Government, agreeing with the Government of Bengal, ruled that the Forest Department is to be conducted in Bengal, as it is in other parts of India, on purely commercial principles, and no hope can be held out that the Government will alter that policy. Then the Hon'ble Maharaja of Gidhaur expressed the hope that agricultural schools will be established in Bihar and the Hon'ble Mr. Das referred to the same point as regards Cuttack. It is the desire of the Government to extend agricultural education and technical education as much as possible, but funds will not admit of more being done at present than is now being done. If the Hon'ble Maharaja will help to establish a school himself in Bihar, the Government will highly approve of his benevolence in this respect. A question has been asked about the expenditure of Rs. 25,000 for a residence for the Chaplain of St. John's Church. The Chaplain receives from the Government Rs. 170 a month for house rent, he asked that a Parsonage be built from the capitalised value of that allowance, and his request has been acceded to, but Government will lose nothing by this transaction. These are all the questions with which the departments under me are concerned."

The Hon'ble Mr. BOLTON said:—"I rise only to answer a few of the questions asked in the course of the speeches which have been delivered. The Hon'ble Babu Surendranath Banerjee referred to the Subordinate Judicial Service, and, with reference to the provision of Rs. 45,000 for Munsifs' residences, enquired what number of residences would be constructed and in what places it was intended to provide them? It is proposed to build in the course of the year eight houses at an average cost of about Rs. 5,000, and they will be constructed chiefly in districts of Eastern Bengal.

"The Hon'ble Member also spoke of the necessity of increasing the staff of the Subordinate Judicial Service. A question on this subject was asked last year, when the then Chief Secretary, Mr. Cotton, gave an answer which still applies. He showed that the staff had been increased by thirty between 1890 and 1894. Since then there has not been so large an increase, but the Government is gradually adding to the number of Munsifs where necessity for doing so is shown, and additions will be made from time to time in future. The

Hon'ble Member also enquired why quarters are to be built for the District Superintendent of Police at Noakhali? There are places in Bengal where it is difficult to find residences for all the officers, and the difficulty tends to increase from year to year. The Government has, therefore, considered it advisable to undertake in some of the worst of these stations the construction of residences for its officers. One of these stations is Noakhali, where many buildings have been demolished, through the disappearance of European residents. Not only there, but also at Darbhanga it has been found necessary to construct quarters for the District Superintendent of Police. This expenditure causes no loss to the Government, because, under the standing rules, officers are required to pay a certain amount of rent, calculated upon a percentage of their salaries, and this rent represents an adequate return upon the capital, amounting to about 4 per cent. The Hon'ble Mr. Wallis drew attention to the Resolution of the Government of India on Jail manufactures recorded in 1882, and quoted the principles laid down in that Resolution. The orders now in force were issued in 1886, and Jail manufactures are being conducted in accordance with them. The manufactures supply, first, the requirements of the Jails themselves, and, secondly, the wants of the other consuming departments of the Government. But in giving employment to all classes of convicts, it is inevitable that certain articles should be manufactured which are not wanted immediately or at all by the Jail or by other departments, and these are disposed of to the Public at the full market prices. These manufactures are very small, and cannot interfere in any appreciable degree with private trade. Another matter which I have to notice is the Hon'ble Babu Guru Proshad Sen's remarks regarding the reduction of the cost of litigation to poor suitors. I have had the advantage of perusing a draft Bill which the Hon'ble Member has prepared on this subject. There are many difficulties in the way of carrying out his plan, and it is for him to move in the matter at any future time if he wishes to do so. The Government is not prepared to take any action in the direction he suggests. The Hon'ble Member also expressed a hope that a test will be introduced for the admission of Rural Sub Registrars into the Registration Department. There is in fact a test. Candidates are in the first instance nominated by District Officers, and they are subjected to examination. The test is sufficiently effective to secure a good class of officers for these appointments."

The Hon'ble Mr. Risley said:—"I shall endeavour to cover the ground over which several Hon'ble Members have gone as shortly as I can. I have to thank the Hon'ble the Maharaja of Gidhaur and other Hon'ble gentlemen for their kindly recognition of the labours of the Financial Department, and I would like in doing so to acknowledge the admirable work done in connection with the preparation of this Budget by the Registrar of the Financial Department of this Government, Babu Surendra Nath Mitter. He has been of the greatest possible service in every way, not only to myself, but to a series of Financial Secretaries going back to the time when the present Lieutenant-Governor himself held that office.

"Now as to the budget itself. The first thing I have to say about it is that it is essentially an emergency budget. Famine has upset everything, and has involved us in very great expenditure. Last year when we took stock of our resources, we thought everything was going on well, and that we should be able to carry out many useful works, but since then we have lost over 40 lakhs of accumulated balance, and besides that we lose 13 lakhs of normal and recurrent revenue by reason of the readjustment of the Provincial Contract. This is a question of fact, and not a matter of opinion; and having this loss of revenue, the only thing we can do is to make the best of it. If you look at the budget in a general way, you will find that the ordinary heads remain very much the same. There are salaries to be paid and services to be kept up, and at no time is there any great opportunity of effecting large improvements from year to year; but there are three heads under which people look for an extension of benefits, and those three heads are—Education, Irrigation and Public Works. It, however, so happens that these expansive heads of expenditure had to be reduced by reason of famine. The figures in the budget do not represent the proposals of the Government. We had to reduce 2 lakhs under

the head of Education. 3 lakhs under Irrigation and 10 lakhs under Public Works. Notwithstanding this, on finding ourselves left with nothing but a choice of evils, we have managed, as the Hon'ble Mr Finucane has told you, to provide for some extension of education. We have not done all we desired to do, but at any rate we have managed not to cut down the existing scale of expenditure unduly. Under Irrigation, the next important head, the improvement and repair of the great irrigation works have been kept up, and there is reason to hope that the tendency of the Department is to extend the distributaries over a far larger area than these works at present cover. During this year there will be completed an important work which was commenced last year. We shall spend upon it nearly four lakhs this year and we hope to complete it. I allude to the canalisation of the Bhangore khal, a very important chain of communication between Calcutta, the eastern districts of Bengal and places on the Brahmaputra and Assam. Owing to some tidal complications, the channel is extremely liable to be silted up, and boats have to go round by the Sunderbuns. There will now be a regular canal with a lock at either end, and the boat traffic over it, when the work is completed, will be very greatly facilitated. I have shown in the Financial statement the chief items of expenditure on original civil works. Some of these have been already referred to and I shall mention others later on.

"I now turn to the remarks which have been made by Hon'ble Members, but their range is so wide that I shall not undertake to reply to all that has been said. First, my friend the Hon'ble Babu Surendranath Banerjee referred to the great strain the plague is putting upon municipal revenues. There is no doubt that is so, and that plague expenditure affects the municipal revenues here in Calcutta, as well as in Dacca. Calcutta needed a great deal of cleaning, and considerable progress has, I am assured, been made; but Dacca is in a most appalling condition of filth, and most likely if the plague came round in this direction, it would settle upon Dacca, and it is reasonable and right that that Municipality should be required to repair the effects of its own disgraceful administration. Dacca has to my knowledge neglected its sanitary requirements for the last five years, and it is only fair that they should be made to pay for that which they have neglected to do. If they are not able to find the money themselves, I shall certainly demur to the proposition that because they have not done what they ought to have done, the Government should now make them a grant. On the contrary, I think the want should be supplied by their being compelled to apply for an emergency loan under the provisions of the Act which has recently been passed. They should borrow in this way whatever may be necessary to make up for their past errors.

"Then with regard to the question of water-supply, the Hon'ble Member referred to the system of permissive taxation legalised under the provisions of the Drainage Bill. As to that, I wish to explain that it was not intended at any time to force any scheme of drainage upon the people. The Bill was meant to provide legal machinery by which people who are dying with fever and want to get their district drained, should apply to the Government for a scheme and offer to be assessed for a term of years to meet the cost of carrying out the scheme. Practically, the same principle applies to the question of water-supply. The financial condition of the District Boards is such that it is out of the question for them to afford any large expenditure upon any general scheme of water-supply; their wants can only be met through some form of local permissive taxation. There is such a scheme now before the Government, and it would have been further proceeded with but for the advent of the famine. I am certain that something of the kind will have to be adopted in the interests of Local Funds, and I gather from the Hon'ble Sir James Westland's speech the other day that this will be one of the conditions on which the Government of India will be prepared to carry out a larger measure of financial decentralisation and make the term of the settlement longer.

"Then my Hon'ble friend compared the contracts of 1877 and 1882, but there was a slight misunderstanding on his part. Take the question of Excise. In 1871-77 the proceeds from Excise were estimated at 63 lakhs. The Government of India said,—'You got 63 lakhs last year; we will make over the Excise

Revenue to you, and will put it at an increase of a lakh a year for the five years, so that you will get 68 lakhs in the last year of the contract.' *Prima facie* that was not a good bargain for the Provincial Government. It happened, however, that it was a period of tremendous expansion in the Excise Revenue. The Provincial share of that revenue went up from 68 lakhs to 93 lakhs; and for that reason in 1882, when a different principle was adopted, the Government of India said,—'We will give you half of the increase in the Excise Revenue, and we will take the other half.' Therefore whereas in the settlement of 1877 the share of the Government of India being fixed and only liable to enhancement by one lakh a year, when that revenue increased by, say, six lakhs, the Provincial Government got five lakhs out of the six, and the Government of India took one; but, under the subsequent contract of 1882, the Government of India got three lakhs, and we got three. In order to understand which of these two systems is the more favourable to the Provincial Government, you will have to go into detailed calculations.

"The question of the Salaries Commission I shall touch upon later on when I come to refer to what the Hon'ble Member for Hooghly said. My Hon'ble friend Babu Surendranath Banerjee then referred to a point of considerable difficulty. He said a part of the proceeds of the Road Cess had for some years been devoted to the furtherance of education, and that the result of the circular which was issued in March last, to the effect that District Boards must spend upon roads and communications an amount at least equal to the proceeds of Road Cess, was that the cause of education suffered. The circular to which the Hon'ble Member referred was an executive order. Under the law the proceeds of the Road Cess may be spent on any purpose for which the District Board can spend their funds, but it was considered desirable as a matter of policy, not as a question of right or law, that they should spend upon roads and communications an amount equivalent to the proceeds of the Road Cess. No doubt education was likely to suffer by such an order, and also from the fact that the income from pounds and ferries had fallen off. The reason for the income from pounds falling off is this, that within the last five years there has been a disposition to look more closely into the system of farming pounds, and it has been felt that this system, which has been extremely lucrative, does not come within the four corners of the Cattle Trespass Act. This Government has always accepted the farming principle, because it is so successful; but when we began to tie up the farming of pounds by rules, and inspection became more careful, such high bids were not received as before.

"I now come to the remarks made by the Hon'ble Mr. Bose upon the charge made upon District Funds for the collection of the Public Works Cess. Two cesses are collected together by the same establishment, and the question arises, in what proportion are you going to allot the charges? This point was gone into carefully by the Board of Revenue in 1879, and what Mr. Dampier then said was that it is desirable to avoid even the appearance of treating Local Funds with any sort of harshness. I have no doubt that the proportion of one-third and two-thirds is a fair proportion, and nobody would come to any other conclusion. The Hon'ble Member is mistaken in saying that the one-third was incorrectly calculated. The amount which he mentioned is only the sum paid in Board districts, and does not include the sum paid in Cess Committee districts. The actual third comes to Rs. 46,800—Rs. 44,500 from the former districts and Rs. 2,300 from the latter. Here, as a matter of convenience, the sum was fixed at the amount that happened to stand in that year, simply as a matter of account, in order to avoid calculating every year what the one-third really is. When it was brought to notice that that sum worked out now to the disadvantage of District Boards, we recognised as reasonable the contention that it should stand at about Rs. 90,000, and we provided for this as part of the standard scale of expenditure for the Province. The provision has been disallowed, and we are now obliged to meet this demand from Provincial Revenues. I cannot give any undertaking as to the time when we shall be in a position to readjust the charge.

"The Hon'ble Mr. Wallis spoke about the General Hospital. I am sure he must know that I am as anxious as he can be to get the work carried out as soon as possible. Last year we took up a piece of land on the side of the

hospital which was required to complete the Committee's scheme. This year we have made provision for one lakh, and hope to be able to spend $1\frac{1}{2}$ lakhs on the subsidiary buildings which are a part of the Committee's scheme. These will fit into the existing blocks and will tend to greater comfort and convenience in the hospital. Another Committee is now about to be appointed for the purpose of examining and reporting on the working arrangements of the hospital, the hours of attendance of doctors and nurses, the cooking arrangements, the supply of stores and the whole question of the administration of the hospital; and a set of rules will be drawn up dealing with these matters. I am glad to say that Mr. Arthur the President of the Chamber of Commerce, and Mrs. Ashton, the Honorary Secretary of the Canning Home, have kindly consented to serve on the Committee.

"I shall now proceed to consider the remarks made by the Hon'ble Babu Guru Proshad Sen, and in doing so I may mention that I found great difficulty in following what he said. Under the head of Stamp Revenue, the Hon'ble Member plunged into a scheme of fancy finance, and constructed an ideal budget on a basis which is entirely unintelligible. Under the head of Excise he repeated what he said last year, with only one addition. I am unable to conceive a less appropriate occasion than the present for criticising the Excise Revenue and complaining that we get more than we ought to get just at the very time when the Government of India have increased the proportion of Excise Revenue from one-fourth to one-half, in order to make some compensation to the Province for the loss of a great source of expansive revenue. I have no hesitation in saying that the Hon'ble Member's attitude as regards Stamps and Excise is something very much like disloyalty to the Province. He has taken up the rôle of a financial Jonah, and I can imagine other members feeling that it is high time for the whale to appear on the scene. I cannot repeat here all that I said last year on the subject of the Excise Revenue. There is one point only about the minimum and maximum price of certain drinks to which I shall refer. The Excise Commission had an idea that for outstill liquor you could fix a minimum price, and that it would do good in two ways: that it would counteract the competition for cheapening liquor, and would lead to the manufacture of more wholesome liquor: but I may add that subsequent experience showed that the Excise Commission were totally mistaken. For none of those consequences followed, and the result was that the proposal as to a minimum price was rightly abandoned. Now as to the question of a maximum price, I may explain that in the district of Gaya a condition is inserted in the licenses of distillery retail shops, that khasia or weak liquor, which has the largest sale in the district, should be sold at not more than 7 Gorokhpuri pice ($1\frac{1}{4}$ annas) a bottle. The measure was reported by Mr. Macpherson, the late Collector, to have worked well on the ground that it reduced smuggling by equalizing the retail prices of distillery and outstill liquor, improved the distillery revenue, and placed distillery liquor within the reach of the majority of the drinking population. Mr. Savage, the present Collector, while of opinion that it was the introduction of new vendors and competition among them, rather than the system of maximum prices, that brought about a reduction of prices and increased sales, still suggests that the system should be retained to serve as a useful weapon in future cases of combination among vendors. Mr. Gupta, the Excise Commissioner, is also in favour of fixing a maximum, but the Board discourage it as an interference with free trade and in itself difficult to enforce. Finally it was decided that the whole question should be discussed at length by the Board of Revenue, whose report has not yet been received.

"Both the Hon'ble Babu Guru Proshad Sen and Babu Eshan Chundra Mittra remarked upon the question of process-fees. I believe there are no charges more readily paid than charges connected with litigation. Litigation in this country occupies quite an exceptional position. It takes the place of Monte Carlo, the Stock Exchange, and the race course all combined, and I would object to any attempt to surrender one pice of the proceeds of process-fees and court-fees.

"Under the head of Income-tax, no doubt, Sir Charles Elliott suggested that the minimum assessable income should be raised, but this was merely a pious

opinion, and any proposal of that kind would require the consent of the Government of India. It raises a large question of Imperial Finance, which would be most carefully considered and most jealously guarded.

"The next point which was referred to is Irrigation. My Hon'ble friend Babu Guru Proshad Sen objects to the charge of Rs. 24,65,000 for interest on irrigation works. That is a charge on the Provincial Revenues, and it is quite legitimate that the interest upon the capital expended for the construction of canals for irrigation should be borne out of those revenues.

"Incidentally, in connection with a general dissertation on the condition of the people, my Hon'ble friend Babu Guru Proshad Sen wandered into a commentary on the condition of the Nunias and Jolahas. Considering that the name of the latter is a typical word for a fool, and that vernacular literature is full of stories to their disadvantage, I doubt whether they can ever have been as prosperous as my friend makes out. However that may be, Manchester cloth has no doubt affected the condition of the Jolaha as Liverpool salt has that of the Nunia. But if you compare the loss to these classes with the enormous gain to the general body of the population, no one will hesitate to say where the balance of advantage lies.

"There is a small point about the profits from printing. Both this Government and other Governments have introduced a number of forms which are a weariness to most people who come into contact with them. But they are a necessity, and you should print them as cheaply as possible. Some years ago a Committee was formed to enquire into this question, and we started an establishment for printing these forms at the Presidency Jail Press. That scheme saved a lakh of rupees in the first year, and has gone on flourishing ever since. I am certain no private press would do the work as cheaply, and I hold that it is quite legitimate that this work should be done in the jail.

"As to the supply of stationery, it is well known to everybody who looks at the reports of the Stationery Department that an enormous amount of country-made stationery is used. Within the last ten years, certainly the last five years, the effort has been everywhere to substitute country stationery for the stationery formerly procured from England, and at the present moment there is not an item of the most insignificant description which can possibly be obtained in this country that is imported from England.

"Lastly, as to the salaries of ministerial officers. I need hardly add anything to what I said on this subject last year. It is a class for whom it is impossible not to have a great deal of sympathy, and in considering our contract we included in our standard scale of expenditure a sufficient sum to enable the salaries of the ministerial officers to be raised to the extent I stated last year, but the Government of India were unable to admit the charge. The Hon'ble Eshan Chundra Mittra said a good deal about unpaid apprentices and told us a pathetic story about the loss of a document. Well, I believe that if you raise the pay of the *amlah* and increase their number, the custom of taking apprentices is so ingrained in this country that they will only have apprentices in larger numbers. I do not think you can get rid of unpaid apprentices, and it is not my experience of Bengal that the practice of stealing inconvenient documents is wholly confined to the poorer classes."

The Council adjourned *sine die*.

Legislative Department.

**GIFT BY HIS HIGHNESS THE RAJA OF HILL TIPPERA OF A PHOTO-
GRAVURE AND COLLOTYPE APPARATUS TO THE SCHOOL OF
ART IN CALCUTTA.**

GENERAL DEPARTMENT—EDUCATION.

Darjeeling, the 1st May 1897.

RESOLUTION—No. 89T.G. ♦

READ—

The correspondence regarding the gift by His Highness the Raja of Hill Tippera of a Photogravure and Collotype apparatus to the School of Art in Calcutta.

His Highness the late Maharaja of Hill Tippera lately brought out a set of photogravure and collotype apparatus from England at a cost of Rs. 30,000, and his son, the present Raja, has offered to hand it over to Government with a view to securing some improvement in the technical education imparted in the School of Art.

2. His Honour the Lieutenant-Governor has had the advantage of the advice of Sir Alfred Croft and of two specialists—Mr. A. W. Turner, of the Survey of India, and Mr. E. B. Havell, Principal of the School of Art—as to the means of utilising the apparatus. There are now nearly 300 pupils in the School of Art, and many of these might learn the processes of photogravure, collotype and (photographic) mechanical printing, which are widely distinct, but can all be carried out with little addition to the apparatus now in hand. There are now in England above ten thousand pupils at the various polytechnic and art schools learning these processes, and they seem particularly adapted to the conditions of Indian youth and society. The pupils of the School of Art might, while learning these processes, produce under direction copies of master-pieces of Indian Art, which are greatly needed for Art instruction in the Calcutta School and in Indian Art Schools generally: such works are the Buddhist frescoes in the Ajanta Caves and the interior decorations of palaces, mosques and public buildings in Northern India. The pupils might also assist in illustrating various Government publications.

3. Government by employing this apparatus in the School of Art will supply a supplementary means of technical instruction and will afford to many young men the prospect of gaining a livelihood. The Lieutenant-Governor has much pleasure in accepting the Raja's gift, and tenders his cordial thanks to His Highness for his generosity. The Director of Public Instruction will be requested to submit definite proposals how best to utilise the apparatus now presented to the School of Art.

ORDER.—Ordered that a copy of this Resolution be published in the *Calcutta Gazette*, and that a copy of it be forwarded to the Director of Public Instruction, Bengal, for information. Also that the Political Department of this Government be requested to forward a copy of the Resolution to His Highness the Raja of Hill Tippera.

By order of the Lieutenant-Governor of Bengal,

M. FINUCANE,

Secretary to the Govt. of Bengal.

**RESULT OF THE EXAMINATION FOR ADMISSION TO THE EXECUTIVE
BRANCH OF THE PROVINCIAL CIVIL SERVICE AND
THE SUBORDINATE CIVIL SERVICE.**

No. 75A—D.

RESOLUTION.

APPOINTMENT.

Dated Darjeeling, the 3rd May 1897.

READ—

The Resolution of the 20th April 1896, reviewing the result of the examination held in March of that year, and appointing candidates to be probationers in the Executive Branch of the Provincial and Subordinate Civil Service.

The Notification of the 18th September 1896, publishing rules for the examination of 1897 for admission to the Executive Branch of the Provincial and Subordinate Civil Service.

The Reports of the Examiners at the examination held on the 29th, 30th, 31st March and 1st April 1897.

The seven Probationary Deputy Collectors and seventeen Probationary Sub-Deputy Collectors appointed on the result of the examination held in March 1896 have all been absorbed into officiating or substantive *pro tempore* appointments. The policy of promoting deserving Sub-Deputy Collectors to officiate as Deputy Collectors has been adhered to.

2. In September last it was notified in the same way as had been done in previous years that at an examination to be held in 1897 seven candidates would be selected for Probationary Deputy Collectorships on a subsistence allowance of Rs. 50 a month, and seven for Probationary Sub-Deputy Collectorships on a subsistence allowance of Rs. 30 a month respectively. It was announced that four Probationary Deputy Collectorships would be given to the first four candidates on the list in order of merit, that three would be selected by the Lieutenant-Governor from amongst those who had obtained a minimum of one-third of the total marks, and that from the remainder of those qualified by obtaining one-third of the total marks, the Lieutenant-Governor would select seven more candidates as probationers for Sub-Deputy Collectorships.

3. The examination was held on the 29th, 30th, 31st of March and 1st April 1897. No fewer than 164 applicants, or one less than the number of last year, obtained permission to compete, and of these 157 (all of whom except six were graduates) actually appeared and sent in papers. Of these 157, only 26 were Muhammadans, 7 Behari Hindus, and 3 Uriyas. In 1896 the corresponding figures were 2, 6, and 6. The total number of candidates who obtained one third marks was 146 against 131 in 1896.

4. Last year seven Probationary Deputy Collectors and seventeen Probationary Sub-Deputy Collectors were appointed. The same number of the former is appointed this year; but in view of the great number of officers already in the Subordinate Civil Service and of the necessity of curtailing recruitment, in order to prevent a great block of promotion hereafter, only seven candidates are selected for appointment as Probationary Sub-Deputy Collectors, as advertised.

5. The following four gentlemen who stood first in order of merit are entitled to appointments as Probationary Deputy Collectors:—

	Number of marks.
Babu Anath Bandhu De, B.A. ...	587
„ Ashutosh Datta, B.A. ...	548
„ Jyotish Ohandra Acharjya, B.L. ...	540
„ Surendra Nath Chakrabarti, M.A., B.A. ...	533

6. The following three candidates have been selected by the Lieutenant-Governor for appointment as Probationary Deputy Collectors after careful consideration of the number of marks obtained, the claims upon Government

of members of the candidates' family, the interests of the different classes of the community, and the requirements of the public service:—

Mr. J. S. Mackay.

Piyara Meerza.

Maulvi Abdul Majid (II), M.A.

7. All these probationary officers will receive a subsistence allowance of Rs. 50 per mensem, and if the report from the districts in which they are stationed is favourable, they will, after such period of probation as may seem advisable, be appointed to be Officiating Deputy Magistrates and Deputy Collectors as vacancies occur. They will not ordinarily be vested with magisterial powers until they are so appointed. Separate orders will now be passed posting all the officers above named to districts.

8. The following are the seven candidates selected by the Lieutenant-Governor, from among those who have obtained one-third marks, to be Probationary Sub-Deputy Collectors:—

Babu Jogindra Nath Pal, B.A.

„ Mohit Chandra Ghose, B.A.

„ Gour Syam Mahanti, B.A.

Babu Uma Charan Roy Chowdhry, B.A.

Maulvi Muhammad Abdul Momen, B.A.

Babu Baijnath Sahai, B.A.

Babu Jyotish Chandra Chatterjee, B.A.

9. These probationary officers will receive a subsistence allowance of Rs. 30 per mensem at present, and will, if they are satisfactorily reported on, be gradually absorbed in the fourth grade of Sub-Deputy Collectors as vacancies occur. Separate orders will at once be passed posting them to districts.

ORDER.—Ordered that a copy of the above Resolution be published in the *Calcutta Gazette*.

By order of the Lieutenant-Governor of Bengal,

C. W. BOLTON,

Chief Secy. to the Govt. of Bengal.

WATER-SUPPLY.

No. 2475 L.S.-G.—The 3rd May 1897.—The following report of the progress made in the district of Cuttack in collecting and placing on record the chief facts regarding water-supply is published for general information.

H. H. RISLEY,
Secretary to the Govt. of Bengal.

No. 110S.-G., dated Cuttack, the 9th April 1897.

Memo. by—H. G. COOKE, Esq., Commissioner of the Orissa Division.

Copy with that of its enclosures forwarded to the Secretary to the Government of Bengal, in the Municipal Department, for information, in continuation of this office memorandum No. 87S.-G., dated the 30th March 1897.

No. 508, dated Cuttack, the 2nd April 1897.

From—E. F. GROWSE, Esq., Magistrate of Cuttack,
To—The Commissioner of the Orissa Division.

WITH reference to your No. 397S.-G., dated 17th December last, forwarding copy of Government Circular No. 58L.S.-G., of the 12th idem, calling for a report on the progress made in collecting and placing on record the chief sources of water-supply in this district, I have the honour to state that the registers of water-supply in the forms prescribed in the Government Circular No. 7T.M., dated 15th May 1896, have been opened in all the Municipalities in this district. The Chairman of the District Board states that the lists of tanks and wells have been received through the agency of the Kanungoes and the registers prescribed in Circular No. 8T.M. of the 15th May last, are being prepared and will be complete this month.

2. As regards steps taken by the District Board and municipalities to improve the existing sources of water-supply and to open new ones, I beg to forward herewith extracts from the letters received from those bodies on the subject.

3. Babu Joggeswar Chandra Chunder, Zamindar and Vice-Chairman, District Board, has offered Rs. 1,000 for the excavation of a tank in his zamindari, and the Board, in their meeting of the 1st February last, accepted the offer with thanks.

Extract from the Chairman of the Cuttack Municipality's No. 160, dated 17th March 1897.

The water-supply is quite sufficient and more wells and tanks are excavated according as necessity arises. The chief supply of drinking water and for ordinary purposes is drawn from the rivers Kathjuri and Mahanadi, which flow on the south and north of this municipality. The water of the Peyton Sahee tank is also used by people for the aforesaid purposes, and the water of this tank, as well as that of the rivers mentioned above, stood first in the chemical analysis, as will appear from the Sanitary Commissioner's last Inspection Report of this municipality. The waters of other tanks and wells, excepting a very few, are wholesome, though they are not so pure as the above three waters. There was no check as to the use of the water of the tanks before, and stringent measures have been taken not to allow washing of clothes by washermen and other people. The water in the Mahanadi is too abundant to require any sanitary measures, and particular care is taken to preserve the purity of the water of the Kathjuri, which has become very scanty, though the river has not yet been included within the limits of this municipality. Special care is also taken against pollution of the water of the Peyton Sahee tank, though it is not a public tank but belongs to private persons. Most of the wells—147 in number—of this municipality have been disinfected with permanganate of potash, an abundant quantity of which has been kept by us for disinfection purposes from time to time. The municipality being too poor to entertain any scheme of filtered water-supply, or even a supply of the river water by means of pipes, as was lately proposed, every effort is made to preserve the purity of the existing sources of supply.

C. A. W. MEADOWS,
Chairman, Cuttack Municipality,

Extract from the Vice-Chairman of District Board's letter No. 402, dated 30th March 1897.

Estimates for 51 tanks amounting to Rs. 64,775 have been submitted by the District Engineer and works of four tanks have been undertaken.

The work of clearing one old tank at Jagannathpur of which the estimate had been previously passed, has been completed.

I may here mention that in regard to the Vice-Chairman's estimates for the 51 tanks referred to above, the District Board, by their Resolution of the 1st instant, passed them provisionally on condition that no work on any tank was to be started, except when the Chairman considered it necessary, of which the Board was to be informed. The list includes a large number of tanks which would only be dug if it was necessary to open relief works, whereas others are useful as ordinary works merely for the purposes of improving the water-supply.

J. C. CHUNDER,
Vice-Chairman, District Board, Cuttack.

Extract from the Chairman, Kendrapara Municipality's letter No. 4, dated 2nd January 1897.

The water-supply of the town is fair and sufficient. The Gobri river and the Gobri canal are the principal sources of water-supply which run through the heart of the town. Besides there are a large number of public and private wells and tanks. All the information required in Government Circular No. 7T.M., dated 15th May last, has been collected, and printed forms for the preparation of the registers have been received. The subjoined statement is extract from the statistics.

Total number of villages.	Total number of houses.	Total population.	TANKS.				WELLS.			
			Government.	Municipal.	Private.	Total.	Government.	Municipal.	Private.	Total.
1	2	3	4	5	6	7	8	9	10	11
62	3,828	17,647	...	1	99	100	14	31	1,235	1,280

The tank water is not used for drinking purposes. Under section 200 of the Act, the following tanks were re-excavated in the course of the last two years :—

	Rs.	A.	P.
1. Oriang tank belonging to Babu Nagendra Nath Roy Chowdhury, zaminder ...	1,400	0	0
2. Birswati belonging to Babu Nagendra Nath Roy Chowdhury, zamindar ...	250	0	0
3. Kaniya Jore belonging to Sheikh Wahed Ullah and others ...	469	14	6

A well with pukka platform and a drain was excavated by the Municipality near the public slaughter-house newly constructed.

All the Municipal Commissioners have in contemplation to excavate a tank and dig a few more wells this year.

TARA PRASANNA ACHERJEN,
Chairman.

Extract from the Chairman, Jajpur Municipality's No. 4, dated 9th January 1897.

Besides tanks and wells, the river Baitarani and its branch, Gargati, which flow past the town on the north side, and the Jajpur canal, with its distributary No. 1, supply water for all purposes to a large number of the residents.

2. The Municipal Commissioners have fourteen wells under their charge, and these wells will be cleared carefully in April or May next. Several of the tanks are reported to be in a bad state. Notices have been issued on the owners of two tanks to cleanse them under section 200, Municipal Act, and on the owner of another either to cleanse it or fill it up with suitable materials. On the failure of the owners, the Municipal Commissioners will take steps to have them cleansed or filled from their own funds. These undertakings will, however, be costly enough.

M. M. CHAKRAVERTY,
Chairman.

STOCKS OF RICE IN AND AROUND CALCUTTA.

No. 1014 Stats.—The following is published for general information.

Total	...	33,092	45,042	130,245	1,77,278

Imports.—The total imports of *rice* during the week ending 21st April 1897 amounted to 104,508 cwts., against 20,360 cwts. in the corresponding period in 1896. Of the former quantity, Burma contributed nearly the whole, viz. 103,891 cwts. There were no imports from Balasore, which supplied 20,360 cwts. in the week ending 21st April 1896. The entire supply of 23,627 cwts. of paddy received during the week ending 21st April 1897 was from Burma. Balasore, which sent 10,890 cwts. in the week ending 21st April 1896, contributed nothing during the week under report. Owing chiefly to there being no supplies of *gram* and *pulse* from Chandballi, which sent 1,478 cwts. in the week ending 21st April 1896, the trade under that head fell from 2,342 cwts. to 1,521 cwts.

Exports.—In the following statement the total quantity of each kind of food-grain exported by sea during the third week of April 1897 is compared with the figures for the corresponding period of 1896 :—

	15TH TO 21ST APRIL			
	1896.		1897.	
1 .	2	3	4	5
	Cwts.	Mds.	Cwts.	Mds.
<i>Food-grains.</i>				
Rice	93,642	1,27,457	105,000	1,42,917
Paddy	1,291	1,757
Wheat	6,694	9,111	558	759
Gram and pulses	21,268	23,948	6,583	8,960
Other food-grains, such as jowar, barley, oats, &c.	170	232	228	310
Total ...	123,065	1,67,505	112,369	1,52,946

The shipments of *rice* to foreign ports amounted to 104,319 cwts. in the week ending 21st April 1897, against 64,037 cwts. in the corresponding week in 1896. The chief fluctuations were an increase of 16,665 cwts. in the exports to Aden: Mauritius took 33,363 cwts. and States in Arabia other than Muscat 30,688 cwts., against nothing in the week ending 21st April 1896; the largest decreases were in the supplies sent to Ceylon (27,751 cwts.), United Kingdom (14,995 cwts.), and to Natal (8,885 cwts.). The falling off in the exports of *wheat* from 6,531 cwts. to only 252 cwts. was practically confined to the despatches to the United Kingdom, to which nothing was sent during the week ending 21st April 1897, against 6,275 cwts. in the week ending 21st April 1896. The trade in *gram* and *pulse* aggregated 2,669 cwts., against 4,735 cwts. in the week ending 21st April 1896, the decrease being chiefly due to diminished exports to the United Kingdom (807 cwts., against 2,021 cwts) and to Ceylon (nil against 1,588 cwts.), while Mauritius took 1,711 cwts., against nothing in the week ending 21st April 1896.

There was again no trade in *rice* with the coast ports. The exports fell from 29,605 cwts. in the week ending 21st April 1896 to only 681 cwts. in the week ending 21st April 1897, the decline being due to nothing having been sent to Bombay and the Madras ports during the period under report, against 18,022 cwts. and 10,317 cwts. respectively in the corresponding period in 1896. Owing chiefly to absence of exports to Bombay, which received 11,108 cwts. in the week ending 21st April 1896, the trade in *gram* and *pulse* fell from 16,523 cwts. to 3,914 cwts. The variations in the other heads are unimportant and call for no remarks.

Detailed statements showing the sources of supply and the places of destination, both as regards Foreign and Indian ports, are given below.

Statement No. I, showing the Imports of Food-grains into Calcutta from Foreign and Indian Ports during the week ending 21st April 1896 and 1897.

STATISTICS OF THE SEA-BORNE TRAFFIC OF THE MINOR PORTS
IN BENGAL IN FOOD-GRAINS.

No. 1016 Statistics.—The following memorandum and statements are published for general information.

STATISTICAL DEPT.,
The 4th May 1897.

M. FINUCANE,
Secy. to the Govt. of Bengal.

Memorandum.

THE comparative statements below give statistics of the import and export trade of the minor ports of Chittagong, Narayanganj, Balasore (including both Balasore and Chandhali), Cuttaek and Puri during the ten days ending 31st March 1897, as compared with the trade of the corresponding period of 1896 :—

	...	{ 1897	19,863	23,414	43,277	58,965

The rise of 20,564 cwts. in the import trade of Chittagong, which amounted to 21,433 cwts., was chiefly due to the receipts of rice and paddy from Burma and Nilla. Balasore also showed an improvement of 263 cwts. on account of larger supplies of wheat, gram and pulse and other food-grains from Calcutta.

The export trade of Chittagong and Narayanganj, which fell off by 2,927 cwts. and 51 cwts. respectively, was attributed to the cessation of exports to Indian ports. Owing to smaller despatches of rice, paddy and gram and pulse to Calcutta, Balasore also showed a decline of 55,433 cwts. There having been no shipments to the Indian ports, Cuttaek too had a falling off of 3,185 cwts., although Foreign ports received 6,971 cwts. in excess of last year. Mainly in consequence of smaller consignments of rice to Colombo, the export trade of Puri also declined by 8,606 cwts.

Detailed statements showing the sources of supply and the places of destination, both as regards Foreign and Indian ports, are given below:—

Statement showing the quantities of Food-grains imported into Chittagong from each Foreign and Indian Port during the ten days ending 31st March 1897, as compared with the trade of the corresponding period of 1896.

EXPORTS OF FOOD-GRAINS BY THE EAST INDIAN RAILWAY.

No. 1015 Statistics.—The following statement shows the quantity of rice and other food-grains exported by the East Indian Railway from Calcutta and Howrah during the period from 1st January to 24th April 1897, both days inclusive, to have been 41,21,341 maunds. The destination of 39,37,313 maunds is specified. A little more than half of this quantity (20,32,127) was carried to the North-Western Provinces and Oudh, a little more than two-sevenths (11,70,112 maunds) to stations in Bengal, and the rest (7,35,104 maunds) to other provinces. In the last week of the period 29,042 maunds were exported to the North-Western Provinces and Oudh, and 1,42,114 maunds to Bihar.

M. FINUCANE,
Secy. to the Govt. of Bengal.

STATISTICAL DEPARTMENT,
The 4th May 1897.

Statement showing the quantities of rice and other food-grains exported from Howrah and Calcutta (Chitpur, Kidderpur Docks, and Port Trust Railway) by the East Indian Railway from 1st January to 24th April 1897.

WEATHER AND CROP REPORT.

For the week ending the 3rd May 1897.

Burdwan.—Rainfall at Sadar 1·38, Kalna 3·45, Katwa 4·10, Raniganj ·30. Ploughing continues. *Aus* being sown. More rain wanted in Raniganj. Fodder and water sufficient generally, but water scarce in parts of Raniganj. Condition of cattle good. Common rice selling as follows:—

	Srs.	c.	Srs.	c.	
Sadar	9 0 to 11 0	} per rupee.
Kalna	8 0 to 9 0	
Katwa	8 0 to 9 0	
Raniganj	8 8 to 9 0	

Birbhum.—Rainfall at Sadar ·46, Rampur Hât ·03. Weather cloudy and rather cold for the time of year. No crops on the ground. Price of rice at Sadar 8½ seers and Rampur Hât 9 seers per rupee.

Bankura.—Rainfall at Bankura ·88, Raipur ·45, Maliara ·51, Khatra ·04, Gangajalghati 1·45, Onda ·63, Vishnupur 1·09, Indas 1·06. Weather unsettled and generally cloudy with occasional dust-storms. The recent rain has cooled down the atmosphere. Ploughing renewed in most parts, but more rain needed. Fodder sufficient. Price of common rice 10 seers per rupee at Bankura and 10½ seers at Vishnupur; it is 9 seers at Chhatna and Saltora outposts and Sonamukhi thana and 11 and 10 seers at Khatra thana and Joyrampur outpost respectively.

Midnapore.—Rainfall at Sadar ·82, Contai ·25, Tamluk ·84, Ghatal ·02. Weather cloudy and unsettled. Heavy rain yesterday (2nd). Prospects of indigo and *tii* good. *Aus* is still being sown, and sowing of *aman* commenced in Tamluk. More rain wanted. Cattle-disease reported from Moisdole, Moyna, Keshpur, Binpur, and Danton. Fodder sufficient. Scarcity of drinking-water felt in Sabang. Common rice selling as follows:—

	Srs.	c.	
Sadar	10 0
Contai	11 to 12 0
Tamluk	9 13
Ghatal	10 to 11 0

Hooghly.—Rainfall at Sadar ·82, Serampore ·91, Jahanabad ·49. Prospect of sugarcane and *tii* improved. Sowing of *aus* and jute commenced in places. Common rice sells at 8 to 10 seers per rupee.

Howrah.—Rainfall at Sadar ·30, Ulubaria ·32. Weather cloudy with occasional rain. Fodder and water sufficient. Common rice sells at 8½ to 11 seers per rupee.

24-Parganas.—Rainfall at Sadar ·37, Barasat ·92. Weather hot and cloudy. No crops on the ground, except sugarcane. Sowing of *aus* and jute going on. Fodder sufficient. Water insufficient in places. Common rice sells as follows:—

	Srs.	c.	
Sadar	8½ to 10 0
Barasat	8 0
Basirhat	9 0
Diamond Harbour	8 14

Nadia.—Rainfall at Sadar ·73, Kushtia ·46, Meherpur 1·15, Chuadanga 1·00, Ranaghat 1·85. Ploughing for and sowing of *aus* going on. Cattle-pox in Chuadanga and Telatta. Water-supply generally deficient, though better than before. Fodder insufficient in places. Common rice sells from 7 to 9 seers per rupee. Latest price of rice where test-works are open is 8 seers per rupee. Numbers on relief on Saturday, 1st May—

	Men.	Women.	Children.	Total.
Relief-workers	19,428
Dependants	9,385
Otherwise relieved	20,085
Test-workers	233
Total	49,131

Murshidabad.—Rainfall at Sadar ·55, Kandi ·70, Jangipur ·21. Weather seasonable. The recent rain has done much good. Sowing of *aus* and *bhadoi* going on. State of indigo good and mulberry improving. Fodder sufficient. Common rice sells as follows:—

	Srs.	c.	
Sadar	8 0
Kandi	8 12
Jangipur	9 0

Latest price of common rice where relief and test-works opened is $8\frac{1}{2}$ seers per rupee.
Numbers on relief on Saturday, 1st May—

	Men.	Women.	Children.	Total.
Sadar and Kandi—				
Relief-workers ...	2,988	7	343	3,338
Test-workers ...	177	Nil	2	179
			Total ...	3,517

Relieved by public subscription nearly 2,000 in all.

Jessore.—Rainfall at Sadar 1·27, Jhenida 2·15, Magura 1·01, Narail ·40, Bangaon 1·50. Weather hot during day, nights cool, cloudy in the evening. The recent rainfall, though unevenly distributed, has done much good to the cultivation of *aus* and *aman* paddy and jute and indigo, which is going on briskly. More rain wanted. Fodder and water scarce in places. Common rice sells as follows:—

	Srs.	
Jessore ...	9 to 10	} per rupee.
Jhenida ...	$8\frac{1}{2}$	
Magura ...	$8\frac{1}{2}$ to 9	
Narail ...	10	
Bangaon ...	10 to 11	

Khulna.—Rainfall at Sadar 2·52, Bagirhat ·26. Weather hot. *Boro* is being harvested; 8-anna outturn expected. Cultivation of *aus* progressing. Common rice sells as follows:—

	Srs.	c.	
Sadar ...	9 to 10	0	} per rupee.
Bagerhat ...	10	0	
Satkhira ...	9	5	

Relief wages calculated at 10 seers per rupee. Fodder available. Great scarcity of good water. No cattle-disease reported. Numbers on relief—

	Men.	Women.	Children.	Total.
Relief-workers ...	3,449	Nil	315	3,764
Otherwise relieved ...	420	3,361	1,579	5,360
			Total ...	9,124

Rajshahi.—Rainfall at Sadar ·52, Nator ·04. Sowing of *aus*, *aman*, and jute going on vigorously. Prospects of standing crops, except sugarcane, are good. Insects to *boro* crop in Manda reported to have disappeared. Fodder available. Scarcity of water felt in places. Price of common rice ranges between 7 seers and 8 seers 14 chitaks per rupee. Price of rice at relief-works 8 seers per rupee. Numbers on relief on Saturday, 1st May—

	Men.	Women.	Children.	Total.
Test-workers ...	768	Nil	13	781

Dinajpur.—Rainfall nil. Weather seasonable. Rain wanted for jute, *bhadoi*, and sugarcane. Fodder and water sufficient. Sporadic cases of cattle-disease. Common rice sells at 9 seers per rupee.

Jalpaiguri.—Rainfall at Sadar ·20, Alipur Duars ·87. Weather warm. Showers are doing much good to *betri* paddy and to sowing of jute and *bhadoi*. No want of fodder and water. Average price of common rice 8 seers per rupee.

Darjeeling.—Rainfall at Sadar 1·34, Kurseong ·28, Kalimpong ·10, Siliguri ·49. Weather seasonable. Hills—*Bhutta*, *bhadoi dhan*, *phaphur*, *chota marua*, *kangni*, and *sama* are coming up. Terai—Sowing of *bhadoi* paddy and jute going on. Price of coarse rice:—

	Srs.	
Hills ...	8 to 9	} per rupee.
Terai ...	8 to 10	

Bhutta sells from 12 to 16 seers per rupee.

Rangpur.—Rainfall at Sadar ·01; district average ·31. Weeding of *aus* and jute continues. Sowing of *aman* commenced. Prospects good. Common rice selling at 7 to $8\frac{1}{2}$ seers per rupee. Fodder and water sufficient.

Bogra.—Average rainfall ·01. Sowing of jute and *aus* continues. The late rain has vastly improved the prospects of *aus* and jute. Fodder and water sufficient. Common rice selling at head-quarters 8 seers 10 chitaks per rupee, and in the interior from 7 seers 2 chitaks to 9 seers per rupee.

Pabna.—Rainfall at Sadar 1·14, Sirajganj ·42. Weather cloudy and rainy. Standing crops doing well. *Aus* sowings going on. Fodder sufficient. Price of rice 8½ seers per rupee. Numbers on relief on Saturday, 1st May—

	Men.	Women.	Children.	Total.
Test-workers ...	391	Nil	101	492

Dacca.—Rainfall at Sadar 1·22, Manikganj ·67, Munshiganj 1·28, Narainganj ·73. Weather hot. Harvesting of *boro* continues. *Aus* and jute plants thriving. Ploughing and sowing still going on. Fodder available. Cattle-disease prevailing in some parts of the Munshiganj subdivision. Price of common rice 9 to 10 seers per rupee.

Mymensingh.—Rainfall at Sadar ·92, Netrokona ·14, Tangail ·56. Weather seasonable. Slight rainfall towards the end of the week beneficial for growing crops. Sowings continue. Price of common rice 8½ to 10½ seers per rupee.

Faridpur.—Rainfall at Sadar 1·59, Goalundo ·85, Madaripur ·11. Weather hot. Prospect of rice and jute sowings good owing to recent rain. Price of rice 9 to 10 seers per rupee. Fodder and water sufficient.

Backergunge.—Rainfall at Sadar 1·30, Pirojpur ·74. Weather seasonable. Prospects of crops improved. Common rice sells from 7 to 10 seers per rupee.

Tippera.—Rainfall at Sadar ·3, Brahmanbaria ·32, Chandpur ·19. Weather unsettled. Sometimes cloudy and sometimes bright and hot. Cutting of *boro* paddy and sowing of *aus* and *aman* paddy continue. Rain badly wanted. Scarcity of water throughout the district. Price of rice 9 seers at most places.

Noakhali.—Rainfall at Sadar nil, Feni ·03. Sowing of *aus* continues. Prospects moderate. No cattle-disease. Fodder and water not sufficient. Common rice selling at 8 to 10 seers per rupee.

Chittagong.—No rain. Weather hot. Prospects of *rabi* crops bad through continued drought. Fields under cultivation for *aus* crop. Water and fodder sufficient. Rice selling at 10 seers per rupee.

Patna.—Rainfall at Sadar nil, Bikram ·09, Bihar ·32. Sugarcane, millets (*cheena*), and vegetables benefited by rain. *Bunga* cotton and castor seeds being collected. Prices slowly rising. Fodder for cattle sufficient, but green fodder not available in Bihar. Water becoming scarce. Cattle-pox prevailing in Patna. Price of rice 8½ seers per rupee. Numbers on relief on Saturday, 1st May—

	Men.	Women.	Children.	Total.
Relieved in poor-houses ...	56	40	16	112
Otherwise relieved ...	7	2	Nil	9
Total ...				121

Gaya.—Harvesting of *cheena* nearly completed. Sugarcane doing well. Price of Burma rice 9½ seers and country rice 8 seers per rupee.

Shahabad.—Local rainfall and hail (at Sadar ·43) benefited sugarcane and *cheena*, but did some damage to mango. *Cheena* sowing at places in progress; those sown early being reaped. Fodder and water for cattle sufficient, except at Ihabua. Price of common rice 8 to 8½ seers per rupee. Latest prices of common rice 8½ seers and pea 10½ seers per rupee at Bhulbha fix the relief-wages. Numbers on relief on Saturday, 1st May—

Singhbhum.—Rainfall at Chaibassa 1·38, Chakradharpur ·78. Rice plentiful. Price of rice from 8 to 12 seers per rupee.

General Summary.—General and in places heavy rain fell over the greater part of Bengal Proper and in Chota Nagpur, and scattered showers in Bihar and Orissa. The ploughing and early sowings are everywhere in good progress, and the prospects of sugarcane, millets and other standing crops are favourable. Early rice and jute where sown are coming up well. The harvesting of spring rice is going on. The water-supply is still reported to be deficient in parts of the Burdwan, Presidency, Rajshahi, Chittagong and Chota Nagpur Divisions. Prices are still reported to be rising in some districts. In the distressed districts the prices of the staple food-grain on which the famine wage is based are—Nadia (common rice) 8 seers, Murshidabad (common rice) 8½ seers, Khulna (common rice) 10 seers, Rajshahi (common rice) 8 seers, Pabna (common rice) 8½ seers, Patna (common rice) 8½ seers, Shahabad (common rice at Bhabua) 8½ seers, Saran (barley) 13 to 14 seers, Champaran (maize)

9½ seers, Muzaffarpur (barley) 12 seers and (rahar) 12 seers, Darbhanga (common rice) 7½ seers and (makai) 9½ seers, Bhagalpur (common rice) 8 and 8½ seers and (marua) 12½ and 13 seers, Sonthal Parganas (rice at Jamtara) 7½ to 8 seers, Puri (common rice) 10 to 12 seers, Hazaribagh (rice) 7 to 8 seers, Palamau (rice) 6 to 8 seers, Manbhum (common rice) 8 to 9 seers.

The mean pressure of the seven days 29.755

The average pressure of the corresponding period for 24 years, Surveyor-General's Office 29.721

The total number of hours of bright sunshine 563

The maximum possible number of hours of sunshine 90.2

The mean temperature of the seven days 87.5

The average temperature of the corresponding period for 24 years, Surveyor-General's Office 85.3

The extreme variation of temperature 30.4

The maximum temperature 102.5

The highest velocity of the wind in one hour 15

The mean relative humidity 69

The average relative humidity of the corresponding period for 24 years, Surveyor-General's Office 72

The total fall of rain from 25th April to 1st May 1897 0.29

The average fall of the corresponding period for 24 years, Surveyor-General's Office 0.81

The total fall from 1st January to 1st May 1897 3.83

The average fall of the corresponding period for 24 years, Surveyor-General's Office 4.90

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a matched screen, open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; p, passing temporary showers;

t, thunder; < lightning; lr, lightning reflection; d, drizzling rain.

METEOROLOGICAL OFFICE, GOVT. OF INDIA,
Calcutta, the 3rd May 1897.

J. H. GILLILAND,
For Meteorological Reporter to the Govt. of India.

INTRODUCTION OF THE PIECE-WORK SYSTEM ON RELIEF WORKS.

REVENUE DEPARTMENT—AGRICULTURE.

Darjeeling, the 6th May 1897.

RESOLUTION—No. 181 T.R.
(Fam.)

READ —

- (1) Government of India, Revenue and Agricultural Department's Circular No. $\frac{18}{104-1}$ F, dated the 13th February 1897, with enclosures.
- (2) This Government's letter to the Commissioner of the Patna Division, No. 519 Agri.—Fam., and circular to other Commissioners, No. 48 (Fam.), dated the 22nd February 1897.
- (3) Letter No. 713 T.M.R., dated the 7th March 1897, from the Commissioner of the Chota Nagpur Division.
- (4) Letter No. 727 B.G., dated 15th March 1897, from the Commissioner of the Patna Division.
- (5) Letter No. 348 F., dated the 20th March 1897, from the Commissioner of the Bhagalpur Division, with enclosure.
- (6) Letter No. 368 F., dated 26th March 1897, from the Commissioner of the Bhagalpur Division, with enclosure.
- (7) Letter No. 958 M., dated 28th March 1897, from the Commissioner of the Rajshahi Division, with enclosures.

- (8) Letter No. 97G., dated 8th April 1897, from the Commissioner of the Dacca Division.
- (9) Letter No. 112F.R., dated 10th April 1897, from the Commissioner of the Chittagong Division.
- (10) Letter No. 6R.G., dated 23rd April 1897, from the Commissioner of the Burdwan Division.
- (11) Proceedings of a Conference held at Darbhanga on 4th March 1897.
- (12) Government of India, Revenue and Agricultural Department's Circular No. $\frac{20}{91-2}$ F., dated 19th April 1897, forwarding a copy of a Resolution of the Government of the North-Western Provinces and Oudh, No. $\frac{753}{8-3}$, dated the 16th March 1897.

In the enclosures to the Government of India's Circular No. $\frac{16}{101-1}$, dated the 13th February 1897, the leading principles that regulate expenditure on public works in time of famine were succinctly described. It was explained that where acute distress or famine prevails, so that the general population is affected and it is necessary to provide employment not only for the able bodied labourers, but also for a large proportion of inefficient labour, task-work must be rigorously enforced, nobody being allowed either to do more than the fixed task, or to earn more than the fixed maximum wage; but that when distress, though present, is not so acute as to drive on to the works a large proportion of inefficient labour or of persons unaccustomed to work, payment by results is more economical than task-work; for so long as an able-bodied labourer can earn enough to enable those of his family, who do not work, to live at home, he will support himself and them more cheaply than Government can do. Payment by results, it was pointed out by the Government of India, might either take the form of an expansion of ordinary works under the usual system of petty contracts, or of the intermediate or gang piece-work system of the North-Western Provinces. The former was deemed to be sufficient when distress is slight, but as scarcity becomes more acute and threatens to deepen into famine, the latter should, it was said, be substituted, since it secures proper remuneration to the individual workman, which, under the urgency of distress, the latter fails to do.

2. The rates offered for the system of piece-work were to be so regulated as not to attract labour for which there is existing employment elsewhere. It was left to Local Governments to judge of the local conditions and to justify to themselves or to the Government of India, as the case may be, the action to be taken under the principles laid down. The Government of India's circular orders, with enclosures, were forwarded to all Commissioners for report on the question how far either of the systems described above was applicable to tracts affected by, or threatened with, scarcity in their respective divisions. At a Conference held at Darbhanga on 4th March 1897, it was pointed out by the Lieutenant-Governor that the intermediate piece-work system of the North-Western Provinces, as then in force, was a system of petty contracts, pure and simple, and it was indicated that if the piece-work system was to be introduced in any tract, His Honour would prefer payments to be made, according to results, by the paid agents of Government, or by gang mates without the intervention of contractors. It was also remarked by His Honour that the task-work and piece-work systems could not be advantageously worked side by side in the same neighbourhood, since all the able-bodied members of families would resort to works conducted on the piece-work system, and earn on them more than enough for their own subsistence, while the weaker members of families would go on to works conducted on the task-work system, and earn enough to keep themselves in health and strength. The piece-work system then suggested has since been modified by the North-Western Provinces Resolution No. $\frac{753}{8-73}$, dated 16th March 1897. Under the modified system no contractor or middleman is employed, the work is laid out, supervised and measured, and payments are made by Government officials. No dependents are recognised, and payments are made in accordance with the amount of work actually done.

3. The reports of the Commissioners on the system described in the first circular of the Government of India, quoted in the preamble, which have now been received, are summarised below, and the Lieutenant-Governor's observations and orders are recorded upon them.

4. **PATNA DIVISION.**—The Commissioner reports that the Samastipur subdivision of the Darbhanga district is not so severely affected by distress as the other parts of that district, and recommends that the test of modified piece-work be tried in that subdivision. The Collector suggests giving out piece-work contracts to small gangs of from 20 to 50 persons at the rate of Rs 1-8 per 1,000 cubic feet of ordinary soil with 50 feet lead or 3 feet lift, an addition of 3 annas per 1,000 cubic feet being giving for each additional 50 feet of lead or 3 feet of lift. The Commissioner proposes to try piece-work in this subdivision at 33 per cent above the ordinary contract rates for earthwork.

At a meeting held in Calcutta on the 10th April, at which Messrs. Bourdillon, Glass, Finucane and Vincent were present, the question was considered of introducing the piece-work system on the following major works in the Patna Division :—

The Tribeni and Bhagmati	Canals.
Sakri-Jaynagar	} Railway lines.
Bettiah-Bagaha	
Raksaul-Ramnagar	

The conclusion come to was that the system should be at once introduced on these works, that a zone of five miles should be left clear of all other relief works on either side of the lines of rail or canal, and that the initial rate to be offered should not be more than 40 per cent. in excess of the rates ordinarily current for work of this kind in the locality. Save to the extent indicated above, the Commissioner does not think it advisable to introduce the piece-work system in the Patna Division, where distress has deepened into famine.

5. **BHAGALPUR DIVISION.**—The Collector of Bhagalpur (Mr. McIntosh) reports that there is considerable demand for employment in certain tracts of North Bhagalpur, but so far little acute distress. The existing circumstances are such that by giving advances under the Agriculturists' Loans and Land Improvement Loans Acts to high-caste agriculturists, by affording employment to the labouring classes where needed, and by distributing a little gratuitous relief to the helpless and indigent, acute distress may, he thinks, be escaped. He writes—

"The stringent and at the same time rather complicated provisions of the Bengal Famine Code, although no doubt well adapted to areas where actual famine exists, seem unsuited to the requirements of North Bhagalpur, where only scarcity in a modified form has appeared. In order to apply the provisions of the Code effectually, a very large petty establishment has to be kept on the works, and this in itself is an item of considerable expense. The Code system also, I think, attracts a number of persons to the relief works who on the piece-work system would not come, and the wage earned by the family is much greater than what would otherwise be earned. If the head of the family were able to earn a good wage by ordinary piece-work labour, he would not require to bring his wife and children on to relief works. In North Bhagalpur there is at present a tendency to work up to the minimum or even the penal rate only—a sure sign, I think, that distress is not acute. This evil, and the well-known evil of appearing on Saturday to earn the Sunday wage, would be entirely obviated by the piece-work system."

Mr. McIntosh quotes with approval the following extract from a note by the District Engineer :—

"I would strongly recommend that the change to the piece-work system be introduced on the Bhagalpur relief works, both roads and tanks, while gratuitous relief for special and comparatively few cases is separately administered. I would give piece-work to gangs numbering from 25 upwards to 50, who select their own headman, fixing the rate per 1,000 cubic feet of earthwork on the basis of Mr. Glass's tables 1A, 2A, 3A, as applied to a class B male worker according to lead and lift, and on the allowance of 16 chitaks (say) of the standard grain. I would not employ as headmen the ordinary class of every-day piece-workers, who usually do the Board's work, and would do away with all muster-rolls, but simply have a daily count of the men, women, and children on each work for the information of the authorities and of Government. The labourers would be told what is the rate per 1,000 cubic feet that they are to get, and the headman would receive, besides, from the officer in charge, a commission of 5 per cent. on the earnings of his gang. Payment to be made once or twice a week to headman, and on the spot after measurement. No Sunday labour and no Sunday wage. The Famine Code Form No. 18, with the then useless columns left vacant, would thus be all the field accounts, besides an ordinary measurement-book, vouchers, cash-book and daily report post-card of mere numbers."

Gratuitous relief for those who, according to the Famine Code, are fit recipients of such relief.

H. J. M.

I would pay three times a week.

H. J. M.

Mr. Carstairs, Deputy Commissioner of the Sonthal Parganas, is also of opinion that the modified piece-work system is suited to his district.

The Commissioner (Mr. Oldham) agrees with these views.

6. CHOTA NAGPUR DIVISION.—Mr. Forbes, Commissioner of the Chota Nagpur Division, writes—

“The population, generally, of Chota Nagpur have means at their disposal, both direct (use of forest edible products and indirect (*e.g.*, from the trade in lac and tusser, &c.), for supplementing the food-supply, which are not to be found in distressed areas (such as North Bihar), where the country is densely populated and every available acre of ground is under cultivation; and I have often felt of late that the provisions of the Famine Code require modification in the direction now proposed to meet the more favourable circumstances in which the people of these districts are placed in the above respects.

“The difficulty I have felt is that throughout the Famine Code the principle insisted upon is *task-work* (with a number of unnecessarily troublesome qualifications), even in respect to test-works; instead of being, as I think it should be, in all but the most extreme cases, a system of *piece-work*, pure and simple.”

“Officers are enjoined on the one hand to exact the full task, while on the other hand they are told that they are not to allow any worker to leave without giving him a certain fixed wage. It is not a matter for surprise that under such mixed orders results vary with the idiosyncrasies of the officers in charge.”

“The idea apparently was that the wage under the Famine Code is pitched so low as to be unattractive to any but people really in want of food. The fact, however, is that the wage, being based upon the market rate of food, is, in affected tracts, very often, if not usually, higher than the ordinary market rate for labour. Test-works opened on such principles of course offer an incentive to every man, woman and child in the land to flock to work, whether in need or not, and there is no feeling of the pulse at all. The result must necessarily be entirely misleading, to say nothing of the almost certain overcrowding and consequent confusion on the works at the outset.”

“The misleading and mischievous prominence given in the rules to the amount of daily wage of each separate man, woman and child should give place to considerations of the rates to be given, under varying circumstances, for *piece-work*. I think that every one concerned, both workers and especially relief officers, would find their duties very much simplified in this way, and we should certainly not witness the very anomalous results we at present so often meet with. Test-works will open on such a low rate per 1,000 cubic feet as will not attract workers unless really in want.”

7. RAJSHAHI DIVISION.—The Commissioner of Rajshahi (Mr. Nolan) says—

“In this Division there are at present no famine works; test-works have been opened in Rajshahi and Pabna. I have insisted on their being conducted from the first on the precise system laid down by the Code, and they have proved most valuable by enabling me to conclude that in those districts matters were not so bad as they were in some quarters represented to be. Should they hereafter lead to the inference that there is really a demand for labour on famine terms, the intermediate system under discussion may prove useful, but at present I would deprecate its adoption. It does not lead up to the immediate object, which is not to relieve, but to test. The expense of establishments and the labour of supervision is re-paid many times over by preventing an unnecessary outlay on extensive works.”

Mr. Bose, Collector of Rajshahi, is in favour of the introduction of the system in his district; he writes—

“The ordinary rates of earthwork in this district vary from Rs. 2 to Rs. 3 per 1,000 cubic feet with a lead of 50 feet and under and a lift of 3 feet and under. The District Board rates with contractors are Rs. 2-8 per 1,000 cubic feet for soft and medium soil and Rs. 3 for hard soil. The Local Boards, when they deal directly with the labourers, sometimes pay Rs. 2 per 1,000 cubic feet. If the rates are fixed at the following figures, I do not think the relief works will attract labour for which there is existing employment elsewhere, viz., Re. 1-8 for soft soil, Re. 1-12 for medium soil, and Rs. 2 for hard soil with 50 feet lead and 3 feet lift, and 3 annas added for every 50 feet lead or 3 feet lift (or depth). As a matter of fact, we are paying at these rates at our test relief works.”

The Collector of Pabna (Mr. Maude) remarks—

“I was not at first in favour of the scheme of piece-work by small local contractors, but in deference to the fact that it seems to have been worked successfully here in 1891, I am willing that it should be tried again in this district. One great gain would be that it would enable us to scatter work more widely throughout the district than can be done under the system of fixed relief at centres under a sub-overseer in particular charge. I would still keep

this system at Dauria on the Sara road, where there are now over 100 workers, and where the number seems likely to increase."

"The rate of Re. 1-9 per thousand cubic feet would give only the bare famine wages to the workers, and allow nothing over. I think we should have to allow a slightly higher rate, say Re. 1-11, which is well below the ordinary contract rate here of Re. 1-14 for soft soil. Higher rate would of course have to be allowed for heavy soils."

8. **PRESIDENCY DIVISION.**—The Commissioner's report has not yet been received, but Mr. Finucane recently visited some of the relief works in progress in the Khulna, Nadia and Murshidabad districts, and having discussed the subject with District Officers on the spot, recommended that the system should be adopted in the Khulna and Murshidabad districts, and also at the Commissioner's discretion in the Nadia district. The Lieutenant-Governor has accepted that recommendation.

9. **CHITTAGONG, BURDWAN, DACCA AND ORISSA DIVISIONS.**—There are no relief works open in the Chittagong, Burdwan and Dacca Divisions, and no report on the subject has been received from the Commissioner of the Orissa Division, in which there is some distress in certain tracts bordering on the Chilka Lake in the district of Puri.

10. After careful consideration of the reports received on this subject, Sir Alexander Mackenzie thinks that the piece-work system should be substituted for the task-work system, as prescribed in the Code, in the Samastipur subdivision of the Darbhanga district, and on the major works of the Patna Division mentioned in paragraph 4 above, in the Chota Nagpur Division, in the Khulna and Murshidabad districts, and at the Commissioner's discretion in the Nadia district of the Presidency Division, in the Bhagalpur and Orissa Divisions, in parts of which there is distress not amounting to actual famine, and also in the Rajshahi Division as soon as the test-work stage has been passed. His Honour is also of opinion that the system might be introduced at the Commissioner's discretion on the larger works in the Saran district.

11. The advantages of adopting the piece-work system where there is scarcity not amounting to acute and widespread famine are these, namely,—

1st.—That the system obviates the necessity for the large establishment requisite for the enforcement of the task-work system with its complications of maxima, minima and penal wages. When distress is not acute, relief works are scattered and labourers comparatively few, and under those conditions the cost of the establishment necessary for enforcement of the Code system of tasks is out of proportion to the expenditure on actual wages that reach the labourers relieved.

2nd.—That it enables the male able-bodied members of families to earn enough to support their females and children. This consideration is of particular importance in the districts of Lower Bengal, where women cannot be induced to work publicly on relief works. As the maximum wage is calculated on the principle of its affording a subsistence to the actual worker and no more, it follows that it leaves nothing for the support of female members of families, who, when they will not work on relief works, must either be put on the gratuitous relief lists or left to starve.

3rd.—In tracts in which distress is not acute, the piece-work system will probably afford all the relief that is necessary, more cheaply than the task-work system prescribed by the Famine Code.

The drawbacks of the system, on the other hand, are that, if the rates are not very carefully regulated, professional labourers accustomed to work and the stronger able-bodied labourers not accustomed to work may earn more than is sufficient to keep them in health and strength, which is all that Government undertakes to do, while the weaker people of the non-professional class may not be able to earn enough to give them and their families a bare subsistence.

12. Having regard to these considerations, the question of fixing the rates for piece-work is a difficult one, and the Lieutenant Governor thinks that in deciding it a large discretion must be left to local officers.

A cardinal principle to be borne in mind is that the rates should be so fixed as not to attract labour for which there is a demand by private individuals or companies who are willing to pay a reasonable wage; but here it must be

remarked that cases have come to the knowledge of Government in which private persons and companies taking advantage of the present necessities of the people have offered to employ famine labour, but only at rates that were inadequate at current prices to yield a bare subsistence to the labourers, thus leaving nothing for their women and children. In such cases the private individuals or companies concerned should be asked to raise their rates to what are deemed to be reasonable and sufficient to provide the labourers with at least a bare subsistence. When the wage offered by private persons or companies is sufficient to give the labourers a bare subsistence or more, care must be taken that Government relief works do not compete with them.

13. It has been suggested that the piece-work rates might be fixed at a certain percentage over the ordinary Public Works contract rates of the district, but this would obviously be a wrong way of fixing rates, and it would lead to anomalous results. For example, 50 per cent. over the ordinary contract rates for medium soil would, in Rajshahi, result in Rs. 4 per 1,000 cubic feet, and would enable an able-bodied man performing Mr. Glass's task to earn 4½ annas a day, while in Bihar the rate fixed on the same principle would be Rs. 2, and a labourers would earn only annas 2½.

As the price of food-grain is nearly the same in Rajshahi and the Bihar districts, it would follow that a labourer would, if the rates were fixed with reference to contract rates, receive twice as much in wages in the former as in the latter districts for the same amount of work, and the cost to Government of relieving any given number of persons would, in Rajshahi, be double what it would be in the Bihar districts.

The Lieutenant-Governor therefore thinks that the rates should be fixed, not with reference to the contract rates of the Public Works Department, but with reference to the price of food, the quantity of it required in order to keep the labourers and their dependents in health and strength, and the quantity of earth that a famine labourer may be expected to be able to excavate and carry. The price of good-grain being the same in any two districts, the piece-work rates should also be the same, whatever the Public Works Department contract rates of the districts may be.

With rice selling at about 9 seers the rupee, as it now is, the Code wage of an able-bodied man performing the task prescribed in Mr. Glass's tables would be about

	... 2½ annas.
of a woman	... 2 annas and 1 pie.
„ big child	... 1 anna and 2 pies.

To enable labourers to earn the above wage on performing the tasks laid down in Mr. Glass's tables, the piece-work rates for earthwork with a lead of 50 feet and lift of 3 feet would be—

			Rs.	A.
Soft soil	1	12 per 1,000 cubic feet.
Medium	2	4 ditto ditto.
Hard	2	12 ditto ditto.

The effect of the adoption of the piece-work system at these rates will be to enable labourers to earn more than they now do by working harder, thus providing a surplus for their dependents, while there will be no danger that even the weakest of them will not be able to earn enough to purchase the Code ration which is deemed to be sufficient for their own subsistence.

The above rates are accordingly sanctioned as the standards, but discretion is left to local officers to increase or reduce them, having regard to local conditions and especially to rise or fall in prices. An additional 3 annas per 1,000 cubic feet may be allowed for every additional 50 feet of lead or 3 feet of lift.

14. The Lieutenant-Governor now sanctions the introduction of the system after the test stage has been passed, where it has not been already introduced, and its continuance where it has been introduced, in the following Divisions and local areas:—

Chota Nagpur	} whole Division.
Bhagalpur	
Rajshahi	
Oriassa	

Samastipur subdivision of Darbhanga, and major works mentioned in paragraph 4 above, and in other major works at the Commissioner's discretion ...	} in the Patna Division.
and at the Commissioner's discretion in the Bhabhua subdivision of Shahabad, and the district of Saran ...	
In the Khulna and Murshidabad districts and at the Commissioner's discretion in the Nadia district ...	} in the Presidency Division.
...	

Where the piece-work system is adopted, the following instructions are to be observed:—

- (1) For every work carried out under this system an estimate of the quantity of work to be done should be framed before the work is actually started, so as to admit of the measurements on which payments are made being readily checked. The cost of the work based on the rates at which it is to be carried out should also be estimated.
- (2) Piece-work should in every case be carried out without the intervention of contractors. The people should be encouraged to form themselves into gangs of as large a number as possible, and each gang should select one of its members to receive and distribute the amount earned. In fact, the man so selected will take the place of the petty contractor who is ordinarily employed under the piece-work system. There will be no maximum or minimum or penal wage, as the earnings of the people will depend entirely on the amount of work done by them.
- (3) Payments should at first be made daily. This can be arranged for by making a rough measurement of the work executed, and paying on account, care being taken that the amount paid on any day is not more than the aggregate wage which the gang would receive if working on the daily wage system. At the end of each week or oftener the work of each gang should be accurately measured up and the amount earned paid, after deducting the payments made on account. It will probably be found, when the people have got into the swing of the work and understood the arrangements, that it will be sufficient to measure up and make payments once a week.
- (4) There will ordinarily be no allowances given to dependents of relief-workers on works carried out under the piece-work system, as the working members of families will be generally able to earn enough to support their dependents.
- (5) The names of labourers employed on the works should be entered in registers to be kept for the purpose once for all on their joining the works, and copies of the nominal rolls thus prepared should be sent to the Circle Officers so as to enable the latter to see that the dependents of relief-workers do not receive gratuitous relief, or at least that they do not receive more of it than is necessary.
- (6) Care should be taken by Circle Officers, when labourers on relief works earn enough to support their dependents, that the latter do not receive gratuitous relief also when such relief is not necessary. Gratuitous relief to dependents will only be necessary and should only be given by Circle Officers when the dependents are so numerous as to render it impracticable for the working members of the family to earn enough to support all of them.
- (7) When a relief work is open on the piece-work system in any locality, no relief work on the task-work system should be opened within a distance of at least five miles.

- (8) For the purposes of the weekly and fortnightly returns, daily muster rolls need not be prepared. It will be sufficient to count the number of persons daily employed.
- (9) Such of the forms prescribed in the Famine Code as are required under the system now sanctioned should be used with the term "piece-work" substituted for "task-work," and columns not required may be left blank.

ORDER.—Ordered that this Resolution be published in the *Calcutta Gazette*, and that copies of it be forwarded to all Commissioners of Divisions and to the Public Works Department of this Government.

By order of the Lieutenant-Governor of Bengal,

M. FINUCANE,
Secretary to the Government of Bengal.

WATER-SUPPLY.

No. 2618 L.S.-G.—The 11th May 1897.—The following report of the progress made in the district of Burdwan in collecting and placing on record the chief facts regarding water-supply is published for general information.

H. H. RISLEY,
Secy. to the Govt. of Bengal.

No. 251 L.S.-G., dated Chinsura, the April 1897.

From—G. STEVENSON, Esq., Officiating Commissioner of the Burdwan Division,
To—The Secretary to the Government of Bengal, Municipal Department.

In continuation of this office letter No. 24 L.S.-G., dated 9th January 1897, I have the honour to submit herewith a further report in connection with the progress made in collecting information regarding the water-supply of the district of Burdwan.

No. 859 G., dated Burdwan, the 13th April 1897.

From—C. FISHER, Esq., Officiating Magistrate, Burdwan,
To—The Commissioner of the Burdwan Division.

IN continuation of this office No. 2286 G., dated the 28th December last, in connection with the progress made in collecting information regarding the water-supply of this district, I have the honour to state as follows.

2. As regards the Kalna subdivision the water-supply registers of thana Kalna have been completely written up, and those of the Purbusthali and Montesser thanas have also been written up, except for five and nine villages, respectively, which have not been traced.

3. For the Raniganj subdivision the registers have been written up in respect of 63 villages in thana Raniganj, 4 villages in thana Asansol, and 9 in thana Kaksa. This leaves 35, 67, and 12 villages, respectively, for which statistics have still to be collected.

4. As regards Katwa subdivision the prescribed registers have been written up for the whole subdivision, except for 11 villages which have not been traced. I have asked the Subdivisional Officer to make further enquiry in respect of these villages and supply details as soon as possible.

5. As regards the Sadar subdivision the registers have been written up in full for thanas Burdwan, Sahebganj, and Raina, while in thanas Budbud, Ausgram, and Khandoghosh, there remain only 2, 4, and 1 villages, respectively, in respect of which statistics have yet to be collected. The registers in respect of the villages in thanas Satgachia and Jamalpur have only been partially written up. The statistics for the remaining villages of these thanas are being collected.

6. I beg to note below the sources of water-supply, their sufficiency or otherwise and other details in connection thereof in the municipalities of this district.

7. In the Burdwan Municipality the water-works supply a greater portion of the municipal area with filtered water. Those that live in quarters situated at some distance from the street hydrants resort to the neighbouring tanks for supply of water. The Banka river and the Eden Canal form the sources of supply of drinking water to a large number of the people living in the southern portion of the Municipality. There are also some wells for the use of the public.

8. In the Kalna Municipality 30 out of 83 perennial tanks have run dry, and the Municipal Commissioners propose to excavate "chowkas" in the bed of dry tanks where necessary; four such wells have been made up to date. The Bhagirathi river supplies drinking water to the residents of the north part of the town. The Commissioners also contemplate sinking a tube well in a suitable locality, and are negotiating with Messrs. Leslie and Company, Calcutta, for the same. A copy of the general abstract of the sources of water-supply, submitted by the Chairman, is submitted herewith.

9. The town of Katwa is situated at the confluence of the rivers Bhagirathi and Ajai, which form the main sources of the water-supply. There are also several tanks from which the people draw water. The Municipal Commissioners do not think it necessary therefore to take steps for improving the existing sources of water-supply of the town.

10. In the Dainhat Municipality the Chairman reports that the existing sources of water-supply are sufficient for the requirements of the people. The people get their drinking water from the Ganges and the adjacent "bawars," that is back-waters left by the floods of the river Bhagirathi; these are annually flushed by the floods. A few people use the water of tanks for drinking purposes.

The Municipal Commissioners excavated a good tank last year near the Municipal office in Ward No. 3 at a cost of more than Rs. 1,000. They also propose to spend Rs. 500 this year in re-excavating two private tanks in Wards Nos. 1 and 2, where scarcity of water is felt.

11. The following table shows the present sources of water-supply in the Raniganj Municipality:—

Wards.			Tanks, wholesome.	Tanks, unwholesome.	Wells, wholesome.	Wells, unwholesome.
I	6	12	80	37
II	1	4	50	54
III	25	15

Mr. Walmsley, Chairman of the Municipality, reports that a sum of Rs. 2,456 has been provided in the budget estimates for 1897-98 for improvement of water-supply in the Municipality. The present supply is not exactly satisfactory, but there is no reason to fear that it will be exhausted.

12. Lastly, in the newly-constituted Municipality of Asansol, a large well in the bazar has been deepened, and a well is being sunk by some Marwaris in the middle of the bazar. The East Indian Railway Company's hydrants are expected to supply the bazar throughout the hot weather. The District Board is also deepening an old well on the Grand Trunk Road.

13. A tabular statement showing the progress made in filling in the water-supply registers in the District Board office during the quarter ending 31st March last is herewith submitted.

Statement showing the progress made in filling in the water-supply registers during quarter ending 31st March 1897.

Number of villages entered in the registers for each thana.			Number of villages for which entries have been made during the quarter.	Number of villages for which entries were remaining to be made.	REMARKS.

STATISTICS OF THE SEA-BORNE TRAFFIC OF CALCUTTA
IN FOOD-GRAINS.

No. 1137 Statistics.—The following memorandum and statements are published for general information.

STATISTICAL DEPARTMENT,
The 11th May 1897.

M. FINUCANE,
Secy. to the Govt. of Bengal.

Memorandum.

The sea-borne import and export traffic of Calcutta in food-grains during the 9 days from 22nd to 30th April 1896 and the corresponding period of 1897 is shown in the following statement:—

		22ND TO 30TH APRIL			
		1896.		1897.	
1		2	3	4	5
<i>Imports.</i>		Cwts.	Mds.	Cwts.	Mds.
From Foreign Ports	...	4	5	9,993	13,601
„ Indian „	...	32,427	44,137	412,734	5,61,777
Total	...	32,431	44,142	422,727	5,75,378
<i>Exports.</i>					
To Foreign Ports	...	328,549	4,47,192	27,272	37,120
„ Indian „	...	63,430	86,335	7,648	10,410
Total	...	391,979	5,33,527	34,920	47,530

Imports.—The different staples comprising the import traffic are shown in the table below, and the figures for the last 9 days of April 1897 are compared with those for the corresponding period of last year:—

		22ND TO 30TH APRIL			
		1896.		1897.	
1		2	3	4	5
<i>Food-grains.</i>		Cwts.	Mds.	Cwts.	Mds.
Rice	...	20,027	27,259	350,074	4,76,489
Paddy	...	9,798	13,336	63,562	86,515
Wheat
Gram and pulses	...	2,606	3,547	9,091	12,374
Other food-grains, such as jowar, barley, oats, &c.
Total	...	32,431	44,142	422,727	5,75,378

Imports.—Of the total import of 340,081 cwts. of *rice* from Indian ports, Burma contributed 284,244 cwts. or 83·58 per cent, against 103,891 cwts. in the preceding week. Balasore sent 21,002 cwts., against *nil* in the corresponding 9 days in April 1896, and Chandbali the remainder, viz. 34,835 cwts., against 20,021 cwts. in the last 9 days of April 1896. The whole of the import of 9,993 cwts. under the head Foreign ports was received from the Straits Settlements, which sent nothing in the period ending 30th April 1896. The imports of *paddy* from Burma amounted to 60,736 cwts. or 99·55 per cent. of the total supply, viz. 63,562 cwts. Balasore sent 1,946 cwts. against *nil*, while nothing was received from Chandbali against 9,791 cwts. in the 9 days ending 30th April 1896. The rise in the trade under *gram* and *pulse* from 2,606 cwts. in the last 9 days of April 1896 to 9,091 cwts. in the corresponding period in 1897 was almost entirely due to the supplies from the Madras ports having risen from 470 cwts. to 3,357 cwts., and to those from Chandbali from 2,136 cwts. to 5,201 cwts.

Exports.—In the following statement the total quantity of each kind of food-grain exported by sea during the last 9 days of April 1897 is compared with the figures for the corresponding period of 1896 :—

1	22ND TO 30TH APRIL			
	1896.		1897.	
	2	3	4	5
	Cwts.	Mds.	Cwts.	Mds.
<i>Food-grains.</i>				
Rice	321,749	4,37,936	24,409	33,223
Paddy	495	674	29	40
Wheat	4,895	6,663	937	1,275
Gram and pulses	57,464	78,215	9,389	12,780
Other food-grains, such as jowar, barley, oats, &c.	7,376	10,039	156	212
Total ...	391,979	5,33,527	34,920	47,530

There was a large falling off in the exports of *rice* to foreign ports, viz. from 287,856 cwts. in the last 9 days of April 1896 to 23,182 cwts. in the same period in 1897. The decline was chiefly due to absence in 1897 of shipments to "Other States" (besides Maskat) in Arabia, Mauritius, Abyssinia, Bremen, and Aden, to which ports 52,383 cwts., 31,442 cwts., 29,794 cwts., 26,026 cwts., and 24,107 cwts. respectively were exported in the 9 days ending 30th April 1896; the despatches to Ceylon also diminished by 26,891 cwts. and to the United Kingdom by 19,228 cwts. The exports of *wheat* to the United Kingdom during the 9 days ending 30th April 1896 aggregated 4,004 cwts., while in the period under review nothing was sent, and this is the chief cause of the fall in the total shipments to foreign ports from 4,758 cwts. to only 279 cwts. The shipments of *gram* and *pulse* during the 9 days ending 30th April 1897 were only 3,782 cwts. against 28,646 cwts. in the corresponding period in 1896, owing chiefly to there being no exports to Mauritius, which received 16,167 cwts. in the 9 days ending 30th April 1896; the exports to the United Kingdom also declined by 3,637 cwts. and to Natal by 3,144 cwts.

The exports of *rice* to Indian ports fell from 33,883 cwts. to only 1,227 cwts. in the period under review, the decline being chiefly due to the Madras ports having received only 1 cwt., against 20,045 cwts. in the last 9 days of April 1896, and to the shipments to Bombay having diminished from 11,756 cwts. to only 499 cwts. The decline of 23,211 cwts. in the supplies of *gram* and *pulse* was chiefly due to the exports to Bombay having fallen off by 18,803 cwts., and to the Madras ports by 5,293 cwts.

Detailed statements showing the sources of supply and the places of destination, both as regards Foreign and Indian ports, are given below.

Statement No. I, showing the Imports of Food-grains into Calcutta from Foreign and Indian Ports from the 22nd to 30th April 1896 and 1897 (both days inclusive).

STATISTICS OF THE SEA-BORNE TRAFFIC OF THE MINOR PORTS IN BENGAL IN FOOD-GRAINS.

No. 1139 Statistics.—The following memorandum and statements are published for general information.

STATISTICAL DEPT.,
The 11th May 1897.

M. FINUCANE,
Secy. to the Govt. of Bengal.

Memorandum.

THE comparative statements below give statistics of the import and export trade of the minor ports of Chittagong, Narayanganj, Balasore (including both Balasore and Chandbali), Cuttack and Puri during the two weeks ending 14th April 1897, as compared with the trade of the corresponding period of 1896 :—

	{ 1897	56,226	56,226	76,530
Cuttack ...	{ 1896	...	19,679	1,467	21,146	28,782
	{ 1897	...	27,079	27,079	36,857
Puri ...	{ 1896	...	1,036	309	1,345	1,830
	{ 1897
Total ...	{ 1896	...	20,715	95,403	116,118	1,58,049
	{ 1897	...	27,079	56,299	83,378	1,13,486

The import trade of Chittagong, which amounted to 11,903 cwts., showed a rise of 11,210 cwts. chiefly on account of larger receipts of rice and paddy from Burma, while the imports into Narayanganj and Balasore fell off by 2,571 cwts. and 172 cwts. respectively.

Owing to the absence of despatches to Foreign and Indian ports, the export trade of Chittagong and Puri declined by 2,538 cwts. and 1,345 cwts. respectively. Narayanganj and Balasore also showed a falling off of 809 cwts. and 33,981 cwts., respectively, in consequence of smaller shipments from Chittagong and Calcutta, while the trade of Cuttack, which was limited to Foreign ports only, improved by 5,933 cwts.

Detailed statements showing the sources of supply and the places of destination, both as regards Foreign and Indian ports, are given below:—

Statement showing the quantities of Food-grains imported into Chittagong from each Foreign and Indian Port during the two weeks ending 14th April 1897, as compared with the trade of the corresponding period of 1896.

EXPORTS OF FOOD-GRAINS BY THE EAST INDIAN RAILWAY.

No. 1138 Statistics.—The following statement shows the quantity of rice and other food-grains exported by the East Indian Railway from Calcutta and Howrah during the period from 1st January to 1st May 1897, both days inclusive, to have been 44,22,463 maunds. The destination of 42,36,031 maunds is specified. A little less than half of this quantity (20,78,811) was carried to the North-Western Provinces and Oudh, about one-third (13,54,119 maunds) to stations in Bengal, and the rest (8,03,101 maunds) to other provinces. In the last week of the period 46,684 maunds were exported to the North-Western Provinces and Oudh, and 1,55,818 maunds to Bihar.

M. FINUCANE,
Secy. to the Govt. of Bengal.

STATISTICAL DEPARTMENT,
The 11th May 1897.

Statement showing the quantities of rice and other food-grains exported from Howrah and Calcutta (Chitpur, Kidderpur Docks, and Port Trust Railway) by the East Indian Railway from 1st January to 1st May 1897.

EXPORTS OF FOOD GRAINS BY THE EASTERN BENGAL STATE RAILWAY.

No. 1132 Statistics —The following statement shows the quantity of rice and other food-grains exported by the Eastern Bengal State Railway from Sealdah and Calcutta during the period from 1st January to 24th April 1897, both days inclusive, to have been 2,30,651 maunds. The destination of 2,28,983 maunds is specified. A little less than three-fourths of this quantity (1,59,790 maunds) was carried to stations in Bengal Proper, and 7,871 maunds to Bihar and Chota Nagpur, about one-seventh (36,087 maunds) to the North-Western Provinces and Oudh, a little over one-tenth (22,950 maunds) to places in Assam and the rest (2,285 maunds) to other provinces.

M. FINUCANE,
Secretary to the Govt. of Bengal.

STATISTICAL DEPARTMENT,
The 10th May 1897.

Statement showing the quantities of rice and other food-grains exported from Sealdah and Calcutta (Port Trust Railway, Chitpur and Kidderpore Dock), by the Eastern Bengal State Railway, from 1st January to 24th April 1897.

COMPARATIVE STATEMENT OF THE PRICES OF FOOD-GRAINS.

RETAIL prices of common rice and other food-grains in the several districts of Bengal and in the neighbouring districts of the North-Western Provinces during the first and second fortnights of March and April 1897, as compared with the corresponding fortnights of March and April 1896, are published for general information. The latest available prices of common rice in Cachar and Sylhet are also published.

M. FINUCANE.

Secy to the Govt. of Bengal.

REVENUE DEPARTMENT, the 11th May 1897.

Gratuitous relief	1,143	2,965	2,241	6,349
Test-workers	2,231	1,523	321	4,075
Total				10,424

Singhbhum.—Rainfall at Sadar .2, Chakradharpur .7. Rice plentiful. Price of rice 7 to 11½ seers per rupee.

General Summary.—There was good general rain over the whole of Bengal proper, and slight local showers are reported from Bihar, Orissa and Chota Nagpur. The present agricultural prospects are generally favourable. Ploughing and sowing are everywhere in full swing. Early rice and jute are for the most part sown and are coming up well. Sugarcane, indigo and other standing crops are promising. The harvesting of spring rice is still proceeding. The rain has improved the water-supply to some extent, but want of good drinking-water is still felt in parts. Cattle-disease is prevalent in Palamau, and is also reported from some other districts. The price of rice is reported to have risen in several

districts. In the distressed districts the prices of the staple food-grain on which the famine wage is based are—Nadia (common rice) 7½ seers, Murshidabad (common rice) 8½ seers, Khulna (common rice) 9 seers, Rajshahi (rice) 8 seers, Pabna (rice) 7 to 9 seers, Patna (rice) 9½ seers, Shahabad (rice at Bhabua) 8 seers, Saran (barley) 12 to 13 seers, Champaran (rice) 8½ seers and (maize) 9½ seers, Muzaffarpur (barley) 12 seers and (*rahar*) 13 seers, Darbhanga (rice) 7½ seers and (*makai*) 9 seers, Bhagalpur (common rice) 8 seers and (*marua*) 12½ and 13 seers, Sonthal Parganas (rice at Jamtara) 8 seers, Puri (common rice) 10 to 12 seers, Hazaribagh (rice) 6 to 8½ seers, Palamau (rice) 5 to 8 seers, Manbhum (common rice) 8 seers.

By order of the Lieutenant-Governor of Bengal,

REVENUE DEPARTMENT,

The 11th May 1897.

M. FINUCANE,

Secretary to the Govt. of Bengal.

Abstract of the results of Meteorological Observations taken at the Alipore Observatory in the month of April 1897.

	Inches.	Date.	Hour.
The mean pressure of the month	29.784		
The average pressure of April from 24 years' registers ...	29.752		
The highest pressure in the month	29.955	4th	10
The lowest pressure in the month	29.645	17th	16
The range of pressure	0.310		
Hours.			
The total number of hours of bright sunshine during the month	256.9		
The maximum possible number of hours of sunshine ...	378.9		
°			
The mean temperature of the month	85.5		
The average temperature of April from 24 years' registers ...	84.7		
The highest temperature in the month	103.7	17th	
The lowest temperature in the month	67.6	4th	
The range of temperature during the month	36.1		
The mean daily range of temperature	22.2		
The greatest range of temperature in one day	31.7	13th	
Per cent.			
The mean humidity of the month	66		
The average humidity of April from 24 years' registers ...	69		
Inches.			
The mean vapour tension of the month	0.779		
The average vapour tension of April from 24 years' registers ...	0.861		
The mean cloud proportion of the month	2.97		
The average cloud proportion of April from 20 years' registers	2.70		
Ins.			
The total rainfall of the month	0.83		
The total rainfall indicated by a Beckley's self-registering rain-gauge (mouth of the gauge about 52 feet above the ground)	0.77		
The average fall of April from 48 years' registers ...	2.81		
The greatest fall in 24 hours	0.29	29th	
Days.			
The number of rainy days in the month	5		
The average number of rainy days in April from 24 years' registers	8		
°			
The mean maximum equilibrium temperature of solar radiation during the month	151.8		
The mean difference of sun and air temperatures	54.6		
The greatest sun temperature	158.4	12th	
The greatest excess of sun over air temperature	61.0	20th	
The mean temperature of the nocturnal radiation thermometer on woollen cloth	70.2		
The mean depression of the nocturnal radiation thermometer below the minimum air temperature at 4 feet above the ground	5.2		
The greatest depression of the nocturnal radiation thermometer below the minimum air temperature	8.9	13th	
Miles.			
The mean movement of the wind per day	160.6		
The greatest movement of the wind in one day	261.0	19th	
The greatest movement of the wind in one hour	17.0	18th Noon to 1 P.M. & 19th Noon to P.M. & 1 P.M. to 2 P.M.	

The number of hours with winds from each of the 8 points—

N. 17, N.E. 18, E. 31, S.E. 31, S. 248, S.W. 255, W. 85, N.W. 33, Calm 2.

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of past years (at the Park Street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore .003 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about 0.2° lower; and, finally, the thermometer which furnished the record of temperature at the Surveyor-General's Office during 20 years and upwards is found to read 0.6 higher than the Kew standard thermometer, which is the standard of reference at the present Observatory.

J. H. GILLILAND,

in Bengal in April 1897—continued.

[illegible]

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE MONTH OF APRIL 1897.

The more noticeable features of the weather during April are—

(1) The rainfall when compared with the normal was heavier in the west than in the east of the province.

Bihar, Chota Nagpur and South-West Bengal all received more than the usual amount, while in East and North Bengal there was a large defect, in the former 2.42 and in the latter 1.18 inches. In Orissa the average fall was practically normal.

This arrangement is similar to what has obtained since the middle of February with a modification as regards Orissa. The shallow depressions which gave rise to the unsettled conditions usual when thunderstorms occur in the early part of the hot weather received a southerly displacement, which led to much heavier rainfall in Orissa than is usual at that time of the year. The effect of this displacement was shown as regards Chota Nagpur and South-West Bengal also. But during April the depressions, though receiving a check to their eastward movement, failed to reach the north of the Bay as in the previous months. The rainfall in Orissa is, therefore, lighter, while in East and North Bengal there is even less rain than in February and March.

(2) The alternations of temperature have been larger than usual, there having been three periods of comparatively cool weather and two during which the heat was much more severe than usual. The times of great heat were just after the middle and towards the end of the month, preceding the occurrence of disturbed weather with general thunderstorms and rain. The difference from the normal means for the month in the large divisions is not very great. In Bihar, North and East Bengal and Assam there was excess of 1° , and in Orissa and Chota Nagpur defect of little more than half a degree.

At the beginning of the month the pressure distribution was more uniform than usual, and fine calm weather with light south-westerly winds and low temperature prevailed, except in the north of the province, where wind directions were east or north-east. Pressure was slightly below the normal in the south of the Bay and above over the province by amounts increasing somewhat towards the north. Mean temperature was from 3° to 6° in defect, the latter in Bihar and Chota Nagpur. On the 2nd there were signs of the approach of a shallow depression from the west, temperature rose rapidly, the winds became more easterly and irregular, and on the following day thunderstorms occurred over almost the whole of Lower Bengal and Orissa. There were a few scattered showers in Chota Nagpur, but rainfall was almost entirely absent in North Bengal and Bihar. The changes of pressure on the 3rd gave an almost uniform distribution over the whole of the Bay and the province with a very shallow depression shown over the central districts of Bengal. The rise continued on the 4th most quickly over Orissa and a high pressure area developed. The arrangement then was unusual and was not accompanied by altogether settled weather, as scattered showers were falling in many districts and temperature was considerably below the normal, especially in the south-west of the province. The showers were more frequent on the 6th and 7th; but as westerly winds were becoming general and more regular, rainfall had ceased entirely on the 8th.

Throughout the first week of the month pressure changes were much more irregular than usual and at times of moderate amount, but the general distribution retained the same features as were noticed at the beginning. There was excess in the west and defect in the east; so that the distribution was much more uniform than is usual in the early part of April. From the 8th the peculiarity became less marked owing to a brisk fall which set in over the north of the province and extended southwards. On the 10th the distribution was very nearly normal, but a rapid rise over Bengal on the following day to a large extent restored the old arrangement. But these changes were only the oscillations which occur in the most settled weather and caused no disturbance, readings being again all but normal on the 16th.

The weather remained settled till towards the 20th, when the second and a more general series of thunderstorms began. A few days previously temperature began to rise, and from the 16th to the 19th more or less severe heat prevailed in all districts, the greatest excess being from 6° to 10° on the 18th. The approach of the slight depression was not well shown till the 18th, when the cyclonic circulation of winds was fairly regular with a centre in Chota Nagpur. The changes of pressure on the subsequent days were so irregular that the appearance of a depression was almost lost, but the cyclonic circulation remained, and it was probably owing to the interaction of the variable winds on the 20th and 21st that almost general rain fell in all parts of the province except Orissa, Chota Nagpur and the west of Bihar. Rainfall continued in East and North Bengal on the 23rd, but by that time settled weather was again almost general.

The fall of temperature caused by the thunderstorms of the 21st and 22nd was large, and on the latter date daily means were from 10° to 12° below the normal in all the central districts.

From the 20th to the 27th fine calm weather prevailed with steadily increasing temperature, excess on the 27th and 28th being generally between 4° and 7° . A short period

of disturbed weather followed, beginning on the 28th, when a few scattered showers fell in Chota Nagpur and South-West Bengal. Rainfall was more general on the 29th, but was in almost all cases light and confined to the south of the province. On the 30th there was very little rain except in part of South-West Bengal and the east of Bihar.

Pressure.—The mean values for April are above the normal at all stations and in most cases by moderate amounts. Excess is about .07 inch for Chota Nagpur, .05 inch for Orissa and the greater part of Bihar, and from .02 to .04 inch elsewhere. The distribution which generally prevailed was more uniform than usual in April, and this was due to the high readings over the province as compared with those at coast stations, especially in the extreme south where there was a small defect.

On the three occasions of disturbed weather when rain was general over a great part of the province, pressure changes were never large, and on the last of the three towards the close of the month pressure was rising during the first two of the three days of unsettled weather.

The peculiarity, noticed in previous reports, that a rapid rise of pressure began in the north or north-east of the province and forced the shallow depressions southwards over Orissa and the north-west angle of the Bay, was noticeable on only one occasion—about the 20th. Its effect was not so great, as it appeared only to prevent the unsettled weather passing eastwards over East and North Bengal which were in consequence deprived of a portion of the rainfall due in this month.

Temperature was very high about the middle and towards the end of the month, that is immediately before the commencement of the second and third of the disturbed periods. After the occurrence of thunderstorms there was an equally large defect, greatest on the 23rd, when defect in mean temperature varied from 2° in Orissa and the west of Bihar to 13° at Krishnagar and Burdwan.

Neither mean day nor night readings differed much from the normal. The difference in the former varied from defect of 2° in Orissa and part of Chota Nagpur to excess of 3° in East Bengal and Bihar: in the latter from defect of 1° in Orissa and South-West Bengal to excess of 1° in the west of Bihar.

Rainfall has been normal or slightly in excess in the western half of the province, the greatest difference being in Bihar, which received about 1 inch as compared with a normal fall of rather more than half an inch. There was a slight excess in South-West Bengal and Chota Nagpur and very nearly the normal fall in Orissa. In East Bengal and North Bengal there was a large defect—2.42 inches in the former and 1.18 in the latter. East Bengal received 1.91 instead of 4.33 and North Bengal 2 instead of 3.18 inches.

Thunderstorms with rain occurred on three occasions—the first near the beginning of the month, the second between the 19th and 21st and the last at the end. The showers were usually rather scattered, and the 21st was the only day on which most of the measuring stations reported rain. Even on that day a few districts were practically rainless, viz., Gaya, Shahabad, Orissa and the greater part of Chota Nagpur.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the Province for the month of April 1897:—

METEOROLOGICAL DIVISIONS.				TEMPERATURE.					RAINFALL.								
				Highest observed during month.	Lowest observed during month.	Averages for month.			Average mean of month above or below normal mean of month.	Of month			Rainy days.			Since 1st April 1897.

The mean pressure of the seven days Inches.
29.653

The average pressure of the corresponding period for 24 years, Surveyor-General's Office 29.694

The total number of hours of bright sunshine Hours.
58.9

The maximum possible number of hours of sunshine 91.0

The mean temperature of the seven days 86.0

The average temperature of the corresponding period for 24 years, Surveyor-General's Office 85.2

The extreme variation of temperature 28.3

The maximum temperature 99.7

The highest velocity of the wind in one hour Miles.
16

The mean relative humidity 74

The average relative humidity of the corresponding period for 24 years, Surveyor-General's Office 73

The total fall of rain from 2nd to 8th May 1897 Inches.
0.19

The average fall of the corresponding period for 24 years, Surveyor-General's Office 0.96

The total fall from 1st January to 8th May 1897 4.32

The average fall of the corresponding period for 24 years, Surveyor-General's Office 5.86

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h., 10h., 16h and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; d, drizzling rain; t, thunder; < lightning; p, passing temporary showers; lr, lightning reflection.

FINAL REPORT ON THE WHEAT CROP OF 1896-97 IN BENGAL.

The following is published for general information.

REV. DEPT.,
The 17th May 1897.

M. FINUCANE,
Secy. to the Govt. of Bengal.

DEPARTMENT OF LAND RECORDS AND AGRICULTURE, BENGAL.

Final report on the wheat crop of 1896-97 in Bengal.

Character of the season.—The character of the early part of the last wheat season was described in the preliminary note on the crop issued on the 3rd February 1897.

The season, to begin with, was very unfavourable to the prospects of the wheat and other *rabi* crops. The entire absence of rain for two months from the latter part of September to the latter part of November, combined with the effects of an abnormally short rainfall during the monsoon

months, reduced the moisture of the soil and interfered with the preparation of land and the sowings of the *rabi* crops generally. Fortunately, the season from the end of November onwards proved to be favourable except in Bengal Proper for the wheat as well as for other *rabi* crops. All the wheat-growing districts of Bihar and Chota Nagpur received more or less rain in the latter part of November and in December and January, which greatly benefitted the standing crops. There was light but general rain again in February which still further improved the prospects of the crops. In March the rainfall was above the normal in every district of these Provinces, the excess amounting to nearly an inch in Bihar and Chota Nagpur. The greater part of the rainfall of March fell between the 22nd and the 30th of the month and came too late to do good to the standing crops, and it may have done some injury to the wheat crop, much of which was then lying on the threshing floors. Injury from the March showers is reported, however, only from Palamu. The frequent showers which fell during the cold weather made up to a large extent for the great deficiency of moisture which had seriously endangered the crop in the beginning of the season. The effects of the drought in October and November are still sufficiently apparent in the diminished area sown with wheat in the last season and in the poor outturn. The rain which fell in the early part of the cold weather (*i.e.*, in November, December and January) was practically absent in the wheat growing districts of Bengal Proper, where the crops suffered from a continued want of moisture, and consequently gave very poor outturn.

2. *Area sown*.—The total area sown in wheat is shown in the appended returns to be 1,273,300 acres, against 1,427,400 acres in 1895-96. The decrease in the area in the season under report amounts to 154,100 acres, or 10·79 per cent. on the estimated area of the previous year. The decrease is due entirely to the drought in the early part of the season, and would have been greater but for the fact that in several districts (*e.g.*, Shahabad and Gaya) wheat was sown on lands where the winter rice crop had failed.

3. *Estimated outturn*.—The outturn of the wheat crop was estimated in the preliminary note at between 10 annas and 11 annas. The rain which fell since the issue of the preliminary forecast appears to have improved the condition of the crop. The outturn of the crop may now be estimated at 12 annas or three-fourths of an average crop. In the districts of the Patna Division which contain a little under one-half of the total wheat-growing area in the Lower Provinces, the outturn of the wheat crop may be put at 13 annas, and in the Bhagalpur Division, which contains about one-third of the total wheat-growing area, at 12 annas.

4. Under orders of Government, an abstract statement showing the prices and general conditions of stocks of food-grains as reported by District Officers is annexed to this report.

Final report on the *bhadai* crop of 1896 dated 8th December 1896. Final report on winter rice crop of 1896, dated 8th December 1896. Preliminary note on the outturn of *rabi* food-crops harvested in the spring of 1897, dated 3rd April 1897.

5. The following is a summary of the harvests of the year 1896-97, based on the marginally-noted reports published by this Department.

Bhadai crops.—The last *bhadai* season was very unfavourable, being characterised by short rainfall in every month since July in all parts of these Provinces except in

Orissa. In Orissa the rainfall was excessive in July and August, and caused repeated floods, which destroyed the standing crops over a large area. The total area cultivated with food and non-food crops in 1896 was returned as 15,931,600 acres, against 15,740,900 acres in the previous year. The increase was nominal. Out of 43 districts from which reports were received only one district, viz., Tippera, reported a full average crop; eight districts, viz., Burdwan, Bankura, 24-Parganas, Dacca, Faridpur, Backergunge, Chittagong and Gaya reported the crop to be from 12 to 14 annas; 27 districts, viz., Birbhum, Midnapore, Hooghly, Murshidabad, Khulna, Dinajpur, Jalpaiguri, Darjeeling, Rangpur, Bogra, Pabna, Mymensingh, Noakhali, Patna, Champaran, Darbhanga, Monghyr, Bhagalpur, Purnea, Malda, Sonthal Parganas, Balasore, Angul and Khondmals, Hazaribagh, Lohardaga, Manbhum and Singhbhum from 8 to 12 annas, and 7 districts, viz., Nadia, Rajshahi, Shahabad, Saran, Muzaffarpur, Cuttack and Puri at less than 8 annas. On the whole the yield of the *bhadi* crops generally for these Provinces did not exceed $10\frac{1}{2}$ annas, while the yield of the *shadi* food crops alone did not, perhaps, exceed $9\frac{1}{2}$ annas of a full average crop.

Winter rice.—The winter rice crop of 1896 suffered very seriously from the deficient rainfall of July and August and the early cessation of the monsoon in the middle of September. The absence of rain in October was further aggravated in the riparian districts of East and North Bengal by the unusually low level of the rivers, which did not rise high enough to inundate the *bhads* where much of the winter rice crop is grown. The total area cropped with winter rice in 1896 was estimated at 29,341,600 acres, against 30,402,500 acres in 1895. The decrease was due to the insufficient rainfall during the transplanting season. Out of 45 districts, only one district, viz., Bogra, returned a crop as much as 12 annas; eight districts, viz., 24-Parganas, Dinajpur, Rangpur, Backergunge, Chittagong, Patna, Angul and Singhbhum, estimated it at 10 to 12 annas; 15 districts, viz., Birbhum, Bankura, Midnapore, Hooghly, Darjeeling, Dacca, Tippera, Noakhali, Gaya, Monghyr, Bhagalpur, Purnea, Sonthal Parganas, Puri and Lohardaga between 8 and 10 annas; 12 districts, viz., Burdwan, Murshidabad, Khulna, Rajshahi, Jalpaiguri, Mymensingh, Faridpur, Cuttack, Balasore, Hazaribagh, Palamau and Manbhum, between 6 and 8 annas; 4 districts, viz., Pabna, Shahabad, Darbhanga and Malda between 4 and 6 annas, and the remaining 5 districts, viz., Nadia, Jessore, Saran, Champaran and Muzaffarpur at less than 4 annas. For the Lower Provinces, as a whole, the outturn of the crop was estimated at only $7\frac{1}{2}$ annas, or slightly below half the average crop.

Rabi crops.—The *rabi* crops of 1896-97 suffered very badly at the time of sowing for want of moisture in the soil, due to the deficient rainfall during the previous monsoon and the entire cessation of rain in October and the greater part of November. Showers were, however, received at intervals during the last cold weather, which did much good in Bihar and in Chota Nagpur. The total area cropped with *rabi* food crops in 1896-97 was estimated at 8,226,300 acres, against 8,993,000 acres in the previous year. The decrease was due to the cessation of the monsoon in September last. Out of 45 districts in the Lower Provinces, only one district, viz., Gaya, returned the crops to be average or 16 annas;

6 districts, viz., Khulna, Rangpur, Muzaffarpur, Darbhanga, Bhagalpur and Malda returned crops varying from 12 to 14 annas; 22 districts, viz., Midnapore, Jessore, Dinajpur, Jalpaiguri, Darjeeling, Bogra, Dacca, Mymensingh, Backergunge, Tippera, Noakhali, Patna, Shahabad, Saran, Champaran, Monghyr, Purnea, Sonthal Parganas, Cuttack, Balasore, Puri and Hazaribagh from 8 to 12 annas; and 16 districts, viz., Burdwan, Birbhum, Bankura, Hooghly, 24-Parganas, Nadia, Murshidabad, Rajshahi, Pabna, Faridpur, Chittagong, Angul and Khondmals, Lohardaga, Palamau, Manbhum and Singhbhum returned the crops to be less than 8 annas. On the whole the outturn of the *rabi* food crops is estimated at $10\frac{1}{3}$ annas. In the Patna and Bhagalpur Divisions, which together comprise $\frac{1}{5}$ ths of the total area under *rabi* food crops, the outturn was, perhaps, not less than 12 annas.

6. Taking into consideration all the harvests of the year, it seems probable that the total supply of food-grains derived from the three harvests *bhadoi*, *aghani* and *rabi* of 1896-97 amounted to only about one-half of the average yield.

7. *Food stocks and prices of food grains.*—The supply of food grains is reported to be below the average in every district of these Provinces. Detailed statistics of the prices of food grains are now being published weekly by Government. The prices of common rice have generally been steady between 9 and 10 seers per rupee for the last few months, except in Orissa, where the range has been between 11 and 13 seers. This steadiness gives ground for the hope that the food stocks existing in the country, combined with imports from abroad, will suffice for the need of these Provinces till the reaping of the next *bhadoi* harvest.

8. *Wheat exports from Bengal and Bihar.*—It will be seen from the figures quoted in the margin that there was a very large falling off in the imports of wheat into Calcutta from Bengal Proper and Bihar during the nine months, April to December 1896, as compared with the imports in the corresponding period of 1895. The decrease was due to short production in 1895-96, to the high prices of food grains prevailing in Bengal, and to the diversion of part of the exports from Bihar to the North-West Provinces during the latter months of the year 1896.

Imports of wheat into Calcutta from Bengal Proper and Bihar during nine months, April to December—

	Mds.
1891	28,37,220
1892	16,76,096
1893	6,43,164
1894	2,03,600
1895	9,81,744
Average of the five years	12,08,373
1896	5,25,039

and Agriculture, Bengal.*

The 3rd May 1897.

Final Report on the Wheat Crop of Bengal, 1896-97.

DISTRICT.	ACREAGE—						OUTTURN IN TONS.						Remarks by District Officers.	Remarks by the Department of Land Records and Agriculture, Bengal.	
	1	2	3	4	5	6	7	8	9	10	11	Percentage by which column 9 exceeds (+) or falls short of (—) area in—			
												Column 3.			Column 4.
Of current year's crop (1896-97).	Of previous year's crop (1895-96).	Average of three preceding years (viz., 1893-95 to 1895-96).	Column 3.	Column 4.	Taking 10 acres to represent the average outturn per acre, how many acres will represent this year's outturn (1896-97)?	Taking 10 acres to represent the average outturn per acre, how many acres will represent outturn last year (1895-96)?	Estimated yield of current year, i.e., of area in column 2.	Yield of previous year, i.e., of area in column 2.	Average of three preceding years (viz., 1893-95 to 1895-96).	Column 10.	Column 11.				
Shahabad	153,860	123,500	116,500	+18'33	+31'76	104	91	43,200	33,100	28,800	+34'57	+50'00	The Subdivisional Officer of Buxar altered his estimate of this year's area returned in the first forecast from 12,784 to 13,549 acres, consequent on recent enquiries made by him, and hence the difference in the area under wheat, as compared with that shown in the first forecast. The increase over last year's cultivation is due to the failure of the rice crop which led to an increased cultivation of wheat. Want of rain affected the outturn.		
Gaya	133,300	125,700	120,000	+5'17	+1'49	16	8	68,100	27,000	41,700	+110'50	+38'32	The increase in area resulted from cultivation of wheat in land on which paddy withered on account of failure of rain in September and October. The outturn was everywhere a full average.		
Bara	89,600	147,400	146,000	—38'32	—38'27	18	8	31,000	72,400	55,400	—1'54	—45'37	The cause of decrease in area has already been explained. The outturn is what it was expected to be.		

District.	ACREAGE—				OUTPUT IN TONS.										Remarks by District Officers.	Remarks by the Department of Land Records and Agriculture, Bengal.	
	Of current year's crop (1896-97).	Of previous year's crop (1895-96).	Average of three preceding years (viz., 1893-95 to 1894-95).	Percentage by which column 3 exceeds (+) or falls short of (-) area in—	Column 3.	Column 4.	Taking 10 annas to represent the average output per acre, how many annas will represent this year's output (1896-97)?	Taking 10 annas to represent the average output per acre, how many annas will represent output last year (1894-95)?	Estimated yield of current year, i.e., of area in column 3.	Yield of previous year, i.e., of area in column 3.	Average of three preceding years (viz., 1893-95 to 1894-95).	Percentage by which column 9 exceeds (+) or falls short of (-) output in—		Column 10.			Column 11.
1																15	
Pales	128,000	165,000	99,000	-9.41	+8.73	115	104	32,200	30,400	33,600	+5.92	+21.05	...				
Darbhanga	96,000	199,000	199,000	-19.25	-17.55	16	8	32,500	22,150	33,600	+16.73	+7.98	In the preliminary forecast the total output of the district was estimated at about 8 annas, viz., Darbhanga 6 annas, Madhubani 4 annas, and Samastipur 13 annas, owing to insufficient moisture and absence of rain. The rainfall during January and February, which was distributed throughout the district, had a wonderful effect in improving prospects. In Madhubani a considerably smaller area than usual was sown owing to drought. The crop which came up gave nearly an average out-				

Masulipatam ..	50,000	70,000	70,000	70,000	-28'57	11	8	15,100	15,400	15,200	-1'25	-45'45	There has been no change since the submission of the preliminary forecast and the same remarks held good.
Champan ..	30,000	37,700	45,000	45,000	-20'42	15	10	7,000	7,400	15,100	-5'40	-45'55	The area sown this year was much less than usual owing to the early cessation of the rains and consequent lack of moisture. The outturn has been less for the same reason and on account of late sowing.
Bhagalpur ..	150,000	150,000	185,400	185,400	+5'00	13	10	65,900	49,700	60,500	+28'57	-8'06	The increase of area in column 2 and outturn in column 7, as compared with the preliminary forecast, is due to more correct estimate.
Monghyr ..	97,500	104,900	106,700	106,700	-5'31	19	104	26,700	30,200	46,000	-11'55	-35'25	The rainfall being below the normal throughout the monsoon season, less quantity of land was cultivated this year.
Madr ..	47,000	45,000	45,300	45,300	+11'30	12	14	15,500	16,100	15,500	-5'72	No change in the estimate of outturn since the preliminary forecast.
Purnea ..	24,000	22,500	22,500	22,500	+5'33	11	13	7,400	7,400	8,200	-9'75	
Benchal ..	5,100	11,700	30,700	30,700	-30'77	104	9	1,800	2,100	6,300	-23'81	-7'40	
Munshabad ..	92,000	120,000	124,500	124,500	-25'71	8	8	6,700	20,000	26,800	-67'04	-81'79	The decrease in the area sown as well as in the estimated outturn is due to want of rain.
Nadia ..	6,000	17,400	30,800	30,800	-32'06	24	7	400	2,900	5,100	-66'30	-93'15	The difference in the outturn shown in the preliminary forecast (31 annas) and that shown in this is owing to want of seasonable rain throughout the year.
Bajshahl ..	60,400	76,900	76,100	76,100	-9'26	5	103	8,300	19,000	24,000	-55'31	-65'41	The decrease in the outturn is due to drought.
Rangpur ..	22,700	22,700	27,000	27,000	...	11	12	8,400	2,900	12,500	-8'60	-32'50	Want of seasonable rainfall is the cause of the outturn being below the average. Rust was also noticed in places.
Pabna ..	11,000	15,400	28,500	28,500	-24'57	8	16	2,800	5,900	5,100	-62'71	-56'59	The figures of column 2 are revised. For want of timely rainfall the soil was unfit for sowing, and hence three-fourths of the last year's area is shown in column 2. The poor outturn shown in column 7 is also due to cessation of rain and want of moisture in land due to low flood.
Burjooling ..	5,100	5,100	5,100	5,100	...	7	8	400	500	700	-28'00	-45'85	Want of seasonable rain accounts for the decrease in outturn.

District.	ACREAGE—						OUTPUT IN TONS.						Remarks by District Officers.	Remarks by the Department of Land Records and Agriculture, Bengal.
	Of current year's crop (1896-97).	Of previous year's crop (1895-96).	Average of three preceding years (viz., 1893-95 to 1894-96).	Percentage by which column 3 exceeds (+) or falls short of (-) area in—		Taking 10 annas to represent the average output per acre, how many annas will represent this year's output (1896-97) ?	Taking 10 annas to represent the average output per acre, how many annas will represent output last year (1895-96) ?	Estimated yield of current year, i.e., of area in column 2.	Yield of previous year, i.e., of area in column 2.	Average of three preceding years (viz., 1893-95 to 1894-96).	Percentage by which column 9 exceeds (+) or falls short of (-) output in—			
				Column 3.	Column 4.						Column 10.	Column 11.		
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
Palamu ..	4,000	16,000	17,500	—75'00	—74'25	9	11	200	4,000	4,000	—08'00	—35'00	The decrease in area and output is due to want of timely rainfall. There is doubt whether a 2-anna crop will be housed, as the weather for the past month has seriously damaged the reaped crop stacked on the threshing floors.	The estimate of output this year seems to be unusually low. There is no apparent reason why the output of the crop on the area sown should be so low in Palamu. It is not certain if the estimate of 9 annas is for the area sown this year or refers to the yield this year as compared with the normal yield.
Jamshedpur ..	6,000	8,000	8,700	—8'04	9	11	900	1,100	1,300	—15'18	—30'76	The decrease in the output is due to the deficiency of rainfall. The poor output was due to want of rain and moisture. I give the estimate of others. If the acreage was only one-fifth of the normal, then 3 annas is too high an estimate.	The acreage has no relation to the character of the crop shown in column 7. The latter should represent the character of the crop on the actual crop-bearing area, and not the character of the total yield, as compared with the normal yield.
Shabbar ..	1,000	6,000	8,000	—60'00	—60'00	3	3	100	500	900	—87'50	—68'98		

Singbhum ...	1,000	2,500	2,000	-48'55	-48'55	8	10	200	400	400	-50'00	-50'00
Locharla ...	500	1,000	1,300	-53'75	-51'33	12	8	100	200	100	-50'00	-50'00	The area sown this year was small but the outturn on such lands as were sown was better than that of previous year.
Mymensingh ...	5,000	10,000	13,300	-50'00	-39'54	8	12	2,700	4,000	6,000	-32'50	-35'00	The short outturn is due to insufficient and unseasonable rainfall during the year.
Faridpur ...	2,500	1,800	1,700	+22'23	+29'41	5	15	300	700	400	-57'14	-25'00	Continued absence of rain has further decreased the outturn.
Bankura ...	2,800	6,000	5,100	-53'33	-45'00	6	12	400	1,700	1,400	-76'47	-71'42	The rainfall was very deficient throughout the season for the cultivation of this crop. Preparation of land and sowings of this crop were almost impracticable during the year, except where the people had recourse to artificial irrigation.
Birbhum ...	100	3,500	5,500	-57'14	-54'21	3	4	(7)	400	1,400	(-58'24)	(-59'50)	The continued want of rain has destroyed the crop.
Bardwan ...	1,100	1,500	1,400	-15'28	-21'43	24	11	100	400	400	-75'00	-75'00	The falling off in the outturn is due to want of rain.
Outack ..	1,000	1,400	1,400	-28'57	-28'57	4	16	100	600	400	-53'33	-75'00	Want of rain at the time of ploughing caused a smaller area to be sown. In the first forecast the outturn was estimated at 3 annas, but prospects have improved by the rain of February, and therefore the increase in estimate now shown.
Total ..	1,573,300	1,427,400	1,454,000	-15'79	-13'02	12*	10	573,600	945,000	472,500	+5'10	-21'15	

* As estimated by this Department.

N.B.—Twenty annas represent a bumper crop, 15 annas an average crop, 12 annas three-fourths of an average crop, and so on.

STATEMENT No. II.

STATEMENT II.
Abstract of the information regarding the prices and general condition of stocks and of food-grains in the Province for 1896-97, as furnished by District Officers.

DISTRICT, WITH DATE OF REPORT.	Cause of extension of wheat cultivation in recent year.	Whether the produce of the year's supply of food-grains has been much above or below the average.	Whether the food-stocks of former harvests are plentiful or not.	Whether prices of food-grains generally have ruled higher or lower than usual.	What have been the causes which have caused an increase or decrease of exports of wheat, and how far has the movement been influenced by a scarcity or otherwise of food-grains.	Remarks by the Agricultural Department.
1	2	3	4	5	6	7
Burdwan 13-4-97.	Below the average throughout the district.	Not very plentiful...	Higher than usual in all parts of the district.	Very little wheat is cultivated in this district, and what is grown is for home consumption and not for export. Wheat is grown in a very small area, and the trade in it is very insignificant. There has been a decrease in the export of wheat from this district owing to the scarcity existing in the previous year. The Railway Statistics show that only 372 maunds of wheat were exported during a period of ten months, from January to October, 1896, against 418 maunds during the same period in 1895. On the other hand, the import was 1,774 maunds against 738 maunds during the above period. The scarcity of other food-grains does not seem to have had any effect in the matter, as the class which consumes wheat in the district is very limited in number.	
Birbhum 17-4-97.	Much below the average	The food-stock of former harvests, i.e., of the years 1893 and 1894, were plentiful, but that of 1895 was the reverse. On the whole the stock as present in the district is sufficient.	Higher than usual		
Bankura 13-4-97.	Ditto	The produce of the crops during 1895-96 having been considerably below the average and a large quantity of the stock having also been exported to other districts during the year under report, the food-stocks of former harvests appear to be scanty.	Much higher than usual. Rice is now sold at 11 seers a rupee against 20 seers a rupee of 1894-95 and 17 seers of 1895-96, and although this rate has been steady for some time, the price will, it is feared, rule still higher before the next crop is reaped.	Very little wheat is cultivated in this district, and what little is grown is not sufficient even for local consumption. Properly speaking there is no export trade of this crop, which is rather imported to meet local demand.	

District WITH DATE OF REPORT.	Cause of extension of wheat cultivation in recent year.	Whether the produce of the year's supply of food-grains has been much above or below the average.	Whether the food-stocks of former harvests are plentiful or not.	Whether prices of food-grains generally have ruled higher or lower than usual.	What have been the causes which have caused an increase or decrease of exports of wheat, and how far has the movement been influenced by a scarcity or otherwise of food-grains.	Remarks by the Agricultural Department.
1	2	3	4	5	6	7
Midnapore 24-4-97.	Much below the average	Sufficient, but not nearly as large as usual in consequence of large exports from this district and short produc- tion.	Much higher than usual	
Hoochly 24-4-97.	Ditto	Not plentiful	Higher than usual	
Howrah (Sadar subdivi- sion). 28-3-97.	Below the average, viz., 11 annas	Not plentiful	Higher	
24-Parganas 25-4-97.	Much below the average	Not plentiful for local consumption	Higher than usual	
Medinipur 6-3-97.	Below the average	Not plentiful enough to make up the deficiency of the year under report.	Ditto	The output of wheat is insigni- ficant. There has been very little export of wheat owing to the poor output of the crop and to the high price of food-grains.	
Mumukshabad 13-4-97.	Much below the average	Not plentiful	Considerably higher than usual.	The considerable decrease in the output of wheat has caused a corresponding de- crease in the export during the year, and the movement appears to have been influ- enced, to a great extent, by the scarcity prevailing during the year.	
Jessore 7-4-97.	Much below the average (by about 30 per cent. in Jhenidah and Narail subdivisions.)	Not plentiful in Sadar, Jhenidah, Bongson and Narail subdivisions. In Nagara subdivision there are no food-stocks of former harvests, the output of the preceding year being deficient.	Higher than usual	
Khairah 24-3-97.	Much below the average	Very scanty	Very much higher than usual	
Rajshahi 6-4-97.	Ditto	Not plentiful	Ditto	The export of wheat from this district is very limited, and is not affected by scarcity or otherwise of food-grains.	

Dinajpur 14-4-97.	Below the average, 10 annas all round.	Pleasant. Supply is ample sufficient to meet the demand for export and local consumption in an ordinary year, but owing to the scarcity in other districts, the exports have been heavier than usual, and probably before the next harvest is reaped will have fallen low.	Higher than usual.	The Collector's remarks in column 5 apparently refers to the total supply, including old and new stocks.
Jalpaiguri 9-4-97. Darjeeling 18-4-97.	Much below the average. Below the average, 8 annas against 12 annas in the previous year.	Not plentiful. Ditto	Much higher than usual. Higher than usual, owing chiefly to the demand in the plains. The price of coarse rice rose from 12 to 9 seers per rupee.	
Rangpur 6-4-97.	Much below the average, owing to deficient or unseasonable rainfall during the year.	Not plentiful. In this district people do not keep large stocks. Tobacco, pite and ginger are largely cultivated, and people rely upon the proceeds for supplies in preference to laying by a store of food-grains.	Much higher than usual. The purchasing power of the people is comparatively higher than in less forward districts; so those who happen to have laid in a stock of grain can stand out for high prices with a certainty of getting them. There is no dearth of money, but in parts the supply of grain is barely equal to the demand.	The wheat is grown in very small quantity and is not exported. Most cultivators have a small patch for their own consumption. They do not reduce it to flour but cook it like rice.
Boera 7-4-97.	The outturn of the rice crop was 12 annas against 10 annas in the previous year and that of the jowar crop 12 annas both in 1896-97 and in the year before. Of the jowar crops the outturn of the pulses was also 12 annas in both years. On the whole the outturn of the winter rice, which has the staple food-supply of the district, was at least expected to be a bumper crop, but, in consequence of want of rains in August and continued drought from October, the expectation could not be realized, and though there was a 12-anna crop all round, the produce of the year's supply of the food-grains was above the ordinary requirements of the people. The prices, however, were much higher, owing to large exportations to other districts and failure of crops all over the province.	Pleasant, there being small demand for exportation in 1896-97.	Much higher than usual. The price of rice, wheat and gram in 1896-97, as compared with the averages of the preceding five years, were as follows:—Best rice 8 seers 3 chittaks against 10 seers 6 chittaks; common rice 11 seers 1 chittak against 14 seers 2 chittaks; wheat 1 seer 2 chittaks against 1 seer 3 chittaks; and grain 11 seers 14 chittaks against 13 seers 10 chittaks per rupee.	The Collector says wheat is grown in very small quantity in the district. The wheat forecast shows, however, that nearly 40,000 acres is normally cultivated with wheat in Rangpur.

DISTRICT WITH DATE AND EXPORT.	Cause of excess or deficiency of wheat cultivation in recent years.	Whether the produce of the year's supply of wheat is has been much above or below the average.	Whether the food-stocks of former years are plentiful or not.	Whether prices of food-grains generally have risen higher or lower than usual.	What have been the causes which have caused an increase or decrease of exports of wheat, and how far has the movement been influenced by a scarcity or otherwise of food-grains.	Remarks by the Agricultural Department.
1	2	3	4	5	6	7
Pabna 8-4-97.	Below the average, owing to want of sufficient and seasonable rainfall during the year.	Not plentiful	Higher than usual	Very little wheat is grown in this district. It is not ex- ported even in an ordinary year, and there was much less chance of export of this article during the year under report on account of the poor outturn of this as well as of all other crops which con- stitute the food-grains of this district. The local demand is supplied by importation from Calcutta, Bogra and the north-western districts. There has been no notice- able decrease in its import during the year, but only the price of it was abnor- mally high.	
Dacca 9-4-97. Mymensingh 20-4-97.	Much below the average Below the average	Not plentiful Ditto	Higher than usual Ditto	There were no exports of wheat from this district during the year under report.	
Faridpur 9-4-97.	Much below the average	Not plentiful, but rather insufficient...	Ditto	There is no cultivation of wheat in this district except in Goalundo. The Subdivi- sional Officer reports that the outturn of wheat was not more than 6 annas, and as it is not used as staple food, its exportation has not been influenced by scarcity.	
Backergunge... 1-4-97.	Eleven annas	In this district people store very little from previous harvests. Wheat is now in stock is almost a negligible quantity.	Ditto	
Tippera 9-4-97. Noakhali 7-4-97.	Much below the average Ditto	Not plentiful Ditto	Ditto Much higher than usual	

Chittagong Patna Gaya 5-4-97.	Considerable below the average. The outturn of <i>dhoria</i> was 12 annas and against 5 annas. Against this deficit must, however, be set a full average crop, and, taking into considera- tion the relative outturn of the various crops, the whole outturn may be estimated at 1/3 of the full average.	Not plentiful, but sufficient	Much higher than usual, the result of the poor crops and the scarcity in other parts of the country	In 1896-97 there was a balance of imports over exports of wheat of a little over 8,000 maunds. In 1896-97 the balance has been in favour of exports to about 8,000 maunds. The cause of the change is the demand on account of scarcity in the North-Western Provinces.	Not received. Ditto.
Shahabad 2-4-97.	Greatly below the average throughout the district. The general yield of the <i>dhoria</i> crop was estimated at 7 annas and that of <i>dhoria</i> at at 6 annas. The estimate of the outturn of all <i>dhoria</i> crops taken together was about 10 annas.	Not plentiful. Imports of grain are being now made, especially into the <i>dhoria</i> sub-division.	Much higher than usual. The low prices stand at famine rates.	There was an enormous in- crease in the export of wheat during the year 1896-97, as compared with that of the preceding year against 3,607 maunds in 1895-96. This is due to the fact that wheat has been a fair crop this year, and in dear lands especially it has been a good one, and partly to the very high prices of wheat in the North-Western Provinces and elsewhere.	Not received.
Saran 22-4-97.	Much below the average	Not plentiful. The produce of the district is not sufficient to provide for its inhabitants. The district depends a good deal upon imports from other districts.	Higher than usual	The export of wheat from this district during 1896-97 was 5,470 maunds against 607 maunds in the previous year. The scarcity and famine prevailing in the North-Western Provinces and Oudh have been the cause of large exports from the district, not only of wheat, but also of other cereals.	Not received.
Champaran
Muzaffarpur.... 2-4-97.	The outturn of the several crops in 1896-97 was as below— <i>Bhadra</i> .. 5 to 6 annas. Winter rice .. 3 " Rabi .. 11 " All the three crops taken together, the average outturn would be about 6 1/2 annas against 10 1/2 annas of the preceding year, or about 9 annas below the average.	The food-stock shows no sign of any depletion, and with the help of <i>dhoria</i> just coming in, will, it is hoped, hold out for at least au- other two to three months.	Very high. Will continue to be so until next crops are harvested.	As usual, there is little or no export of wheat from this district. It is always im- ported from other places.

District WITH DATE OF REPORT.	Cause of extension of wheat cultivation in recent years.	Whether the produce of the year's supply of food-grains has been much above or below the average.	Whether the food-stocks of former harvests are plentiful or not.	Whether prices of food-grains generally have ruled higher or lower than usual.	What have been the causes which have caused an increase (or decrease) of exports of wheat, and how far has the movement been influenced by a scarcity or otherwise of food-grains.	Remarks by the Agriculture Department.
1	2	3	4	5	6	7
Darbhanga 7-4-97.	Much below the average. During the year the <i>Madia</i> yielded 9 annas for the whole district, varying from 4 annas in Madhubani to 13 annas in the Sadar and Samastipur, and that of the winter rice was only some 4 annas in the Sadar and Madhubani and 6 annas in the Samastipur subdivision. The average outturn of <i>rahi</i> has been estimated at about 8 annas in Madhubani, 13 annas in Darbhanga and 16 annas in Samastipur. The rainfall of January and February had a wonderful effect in improving the barley and wheat crops, while at the same time it was too light to do any harm to the <i>rahar</i> and mustard. Winter rice below the average owing to insufficient rainfall. <i>Bhadol</i> was also below the average, but <i>rahi</i> has been an average crop.	It is believed that the food-stocks from previous harvests equalled about three months' supply or perhaps a little more.	The prices were normal up to the end of August, but since then they have risen very high.	The cultivation of wheat is not largely carried on in this district, and the produce is generally consumed locally. Export is not carried on to any appreciable extent.	
Monghyr 8-4-97.	Winter rice below the average owing to insufficient rainfall. <i>Bhadol</i> was also below the average, but <i>rahi</i> has been an average crop.	The food-stocks of former harvests are probably almost entirely exhausted, the prevailing high prices obtainable having had the effect of increasing sales for exports. The fact that but little is being exported at present prices shows that stocks are abnormally low.	A great deal higher than usual since July last.	There has been a decrease in the export of wheat this year, as the produce of the wheat crop was less than usual. This diminution in exports was independent of the scarcity of food-grain.	
Bhagalpur 10-4-97.	Much below the average on account of insufficient rainfall.	Not plentiful. They have probably been all consumed or exported from the district.	Much higher than usual. They have approached to famine prices.	There is no extensive cultivation of wheat in the district. The produce is, perhaps, just enough for district consumption. The export of wheat during the year has been less than that in the preceding year, owing to the fact that the <i>rahi</i> harvest of 1896-97 was very much less than that of 1895-96. There has, however, been an enormous export trade in other food-grains owing to shorter production of wheat in 1896-97.	The Collector's statements to the effect that there is no extensive cultivation of wheat in Bhagalpur, and that the local production is just enough for local consumption, are not consistent with his estimates of wheat cultivation, according to which about 200,000 acres are normally cultivated with wheat in the dis-

Purnea 7-4-97.	Much below the average. Less than half of that of the preceding years.	The food-stocks of former harvests yet exist, but are not believed to be plentiful.	Much higher than usual	...	This has aggravated the scarcity felt in this district, and necessitated the opening of relief works.	trict, and with the fact that in 1895-96 as much as 175,000 maunds of wheat were exported from the district to Calcutta.
Maldah 2-4-97.	Much below the average	Not plentiful	Higher than usual	...	The export of wheat greatly decreased as compared with that of the preceding year, owing to short-crop during the year.	
Sonthal Prasanna 9-4-97.	Much below the average	Not plentiful	Higher	...	During the year under report, the export of wheat was less than in previous year, owing to the produce being considerably below the average. The Subdivisional Officer of Godda reports that the exportation of wheat has been increased, and high prices have been paid owing to heavy demand in Bihar and North-Western Provinces on account of famine. The Subdivisional Officer, Rajmahal, reports that there has been a decrease of exports of wheat owing to the outturn being small. The Subdivisional Officer of Pakour reports that the exports of wheat are normal.	
Onitack 7-4-97.	Much below the average. Stocks were plentiful at the beginning of the year, as would be apparent from the fact that common rice, which is the staple food of the district, sold at the average price of 28 seers 94 chittaks per rupee in March 1896 and 25 seers 14 chittaks in April 1896. These were speedily reduced by exports, as prices ruled high in other parts of India and in Australia. It cannot be said that stocks have been very seriously depleted, but in many parts of the district stocks are much smaller than usual, and it is believed the tendency is with improved cultivation and greater trade facilities, for smaller stocks to be held than formerly even in conservative areas.	Higher than usual	...	A limited quantity of wheat is grown in this district. Never exported. The demand for consumption is met by imports from other places.	
Balasore 6-4-97.	Much below the average	Not plentiful	High during the second half of the year.	...		

DISTRICT WITH DATE OF REPORT.	Cause of extension of wheat cultivation in recent years.	Whether the produce of the year's supply of food-grains has been much above or below the average.	Whether the food-stocks of former harvests are plentiful or not.	Whether prices of food-grains generally have ruled higher or lower than usual.	What have been the causes which have caused an increase or decrease of exports of wheat, and how far has the movement been influenced by a scarcity or otherwise of food-grains.	Remarks by the Agricultural Department.
1	2	3	4	5	6	7
Angul and Khondmala. 30-3-97.	...	Below the average. More than sufficient for the population until September 1897.	...	Much higher than heretofore. Will probably be still further. The Deputy Com- missioner thinks that the price of common rice, which is now selling at 16 Baharee seers per rupee will go up to 11 or 12 seers. Higher than usual.		
Parl 31-3-97. Hazaribagh 23-3-97.	...	Much below the average. About 10 annas on the whole. Much below the average	Fairly abundant still	Ditto	As a matter of fact, wheat is never exported from this district.	Not received.
Lehardaga	Not plentiful	...	No wheat is exported from this district. Comparatively little is grown here.	Not received.
Palamanu 5-4-97.	...	Ditto	The food stocks of former harvests are exhausted, or very nearly so.	Very high indeed		
Mandbhum	...	Below the average. Nine annas	Normal	50 per cent. higher than usual	Wheat is not exported from the district.	
Singbhum 19-3-97.	...					

STOCKS OF RICE IN AND AROUND CALCUTTA.

M. FINUCANE,
Secretary to the Government of Bengal.STATISTICAL DEPARTMENT,
The 18th May 1897.

STATISTICS OF THE SEA-BORNE TRAFFIC OF CALCUTTA IN FOOD-GRAINS.

No. 1159 Statistics.—The following memorandum and statements are published for general information.

STATISTICAL DEPARTMENT,
The 18th May 1897.

M. FINUCANE,
Secy. to the Govt. of Bengal.

Memorandum.

The sea-borne import and export traffic of Calcutta in food-grains during the week ending the 7th May 1896, and the corresponding period of 1897, is shown in the following statement:—

		1st to 7th MAY			
		1896.		1897.	
1		2	3	4	5
		Cwts.	Mds.	Cwts.	Mds.
<i>Imports.</i>					
From Foreign Ports	...	15	20	1	1
" Indian "	...	35,543	48,378	301,739	4,10,700
Total	...	35,558	48,398	301,740	4,10,701
<i>Exports.</i>					
To Foreign Ports	...	109,938	1,49,638	66,977	91,163

Other food-grains, such as jowar, barley, oats, &c.
Total	...	35,558	48,398	301,740	4,10,701

Imports.—The quantity of rice imported was ten times greater than that received in 1896, viz., 228,781 cwts. against 22,367 cwts. Of the former quantity, 224,657 cwts. came from Burma, and 4,109 cwts. from Balasore. Owing chiefly to the import of 62,794 cwts. of paddy from Burma, the figures under that head rose from 9,906 cwts. to 64,498 cwts. The chief fluctuations in the trade in gram and pulse were an increase of 5,326 cwts. in the supplies from Coconada and of 2,451 cwts from Rangoon, against a decrease of 2,795 cwts. from Chandbali.

Exports.—In the following statement the total quantity of each kind of food-grain exported by sea during the week ending 7th May 1897 is compared with the figures for the corresponding period of 1896 :—

	1ST TO 7TH MAY.			
	1896.		1897.	
1	2	3	4	5
	Cwts.	Mds.	Cwts.	Mds.
<i>Food-grains.</i>				
Rice	103,167	1,40,422	70,054	95,351
Paddy	1,281	1,744	23	31
Wheat	11,463	15,602	1,429	1,945
Gram and pulses ..	46,532	63,335	16,848	22,932
Other food-grains, such as jowar, barley, oats, &c.	1,787	2,432	1,234	1,680
Total ...	164,230	2,23,535	89,588	1,21,939

There was a fall of only 18·45 per cent in the exports of rice to foreign ports, viz., from 78,275 cwts. to 63,830 cwts. The chief variations were a decrease of 27,007 cwts. in the despatches to Ceylon and of 16,365 cwts. and 8,956 cwts. to Réunion and Natal respectively, to which two ports nothing was sent in the week under review. On the other hand, there was an increase of 19,019 cwts. in the shipments to muscat, and of 10,460 cwts. to Aden which received nothing in 1896. Owing to the cessation of exports of wheat to the United Kingdom, the trade under that head fell from 11,201 cwts. to only 25 cwts. in the week under review. The decline of 16,066 cwts. in the exports of gram and pulse was almost entirely due to the quantity sent to the United Kingdom having diminished by 3,695 cwts. and to Réunion and Mauritius having taken nothing against 7,301 cwts. and 4,305 cwts. respectively in 1896.

The fall off of 18,668 cwts. in the exports of rice to Indian ports, viz., from 24,892 cwts. to 6,224 cwts., was due to a decrease of 9,484 cwts. in the shipments to Bombay and of 9,244 cwts. to the Madras ports. The trade in gram and pulse was half that of 1896, viz. 14,633 cwts. against 28,251 cwts., the decline being chiefly due to the exports to Bombay having diminished by 12,855 cwts.

Detailed statements showing the sources of supply and the places of destination, both as regards Foreign and Indian ports, are given below :—

EXPORTS OF FOOD-GRAINS BY THE EAST INDIAN RAILWAY.

No. 1163 Statistics.—The following statement shows the quantity of rice and other food-grains exported by the East Indian Railway from Calcutta and Howrah during the period from 1st January to 8th May 1897, both days inclusive, to have been 7,59,571 maunds. The destination of 45,67,968 maunds is specified. A little less than half of this quantity (21,36,458) was carried to the North-Western Provinces and Oudh, about one-third (15,48,484 maunds) to stations in Bengal, and the rest (8,83,026 maunds) to other provinces. In the last week of the period 57,647 maunds were exported to the North-Western Provinces and Oudh, and 1,72,526 maunds to Bihar.

M. FINUCANE,
Secy. to the Govt. of Bengal.

STATISTICAL DEPARTMENT,
The 18th May 1897.

Statement showing the quantities of rice and other food-grains exported from Howrah and Calcutta (Chitpur, Kidderpur Docks, and Port Trust Railway) by the East Indian Railway from 1st January to 8th May 1897.

EXPORTS OF FOOD-GRAINS BY THE EASTERN BENGAL STATE RAILWAY.

No. 1164 Statistics.—The following statement shows the quantity of rice and other food-grains exported by the Eastern Bengal State Railway from Sealdah and Calcutta during the period from 1st January to 1st May 1897, both days inclusive, to have been 2,68,566 maunds. The destination of 2,66,998 maunds is specified. A little less than three-fourths of this quantity (1,93,314 maunds) was carried to stations in Bengal Proper, and 10,191 maunds to Bihar and Chota Nagpur, about one-seventh (36,095 maunds) to the North-Western Provinces and Oudh, a little over one-tenth (25,093 maunds) to places in Assam and the rest (2,305 maunds) to other provinces.

M. FINUCANE,
Secretary to the Govt. of Bengal.

STATISTICAL DEPARTMENT,
The 18th May 1897.

Statement showing the quantities of rice and other food-grains exported from Sealdah and Calcutta (Port Trust Railway, Chitpur and Kidderpore Docks), by the Eastern Bengal State Railway, from 1st January to 1st May 1897.

STATION TO WHICH CONSIGNED.	Total from 1st to 30th January 1897.	Total from 31st January to 27th February 1897.	Total from 28th February to 27th March 1897.	Total from 28th March to 24th April 1897.	Week ending 1st May 1897.

CONSOLIDATED PROVINCIAL STATEMENTS OF FOOD-GRAIN TRAFFIC
OF THE LOWER PROVINCES.

No. 1196 Statistics.—The following memorandum and statements are published for general information.

M. FINUCANE,
Secy. to the Govt. of Bengal.

STATISTICAL DEPARTMENT;
The 18th May 1897.

MEMORANDUM.

In the *Calcutta Gazette* of the 17th March 1897, consolidated provincial statements were published for the month of December 1896 in comparison with the figures for the corresponding month of 1895, showing the traffic in food-grains in all the routes by which this trade is registered in Bengal. Similar statements are now published for the month of January 1897, as compared with the figures for January 1896. The following divisions of the trade are registered on the routes shown against each:—

- (1) Trade of Calcutta and Howrah—
With all districts and provinces in India ... By inland routes, i.e., by rail, country boats, inland steamers and road, and by sea-going vessels, both foreign and coasting.
- (2) Trade of the Dacca, Chittagong, and Orissa Divisions—
With Calcutta ... By all inland routes and coasting vessels.
With foreign ports ... By sea.
And with other districts and provinces in India ... By rail only.
- (3) Trade of the Burdwan, Presidency, Rajshahi, Patna, Bhagalpur, and Chota Nagpur Divisions—
With Calcutta ... By all inland routes.
And with other districts and provinces in India ... By rail only.

The table below shows the total quantity of food-grains carried to and from these provinces during the months of January 1896 and 1897:—

		Imports.		Exports.	
		1896. Mds.	1897. Mds.	1896. Mds.	1897. Mds.
Rice	...	26,07,646	36,68,412	38,36,834	35,53,277
Paddy	...	3,88,861	6,98,224	3,89,969	6,94,298
Wheat	...	1,63,695	1,00,556	52,506	45,813
Gram and pulses	...	4,63,535	6,73,701	7,83,777	10,72,965
Other food-grains	...	1,26,488	1,66,396	2,72,802	3,35,457
Total	...	37,50,225	52,07,289	53,35,848	57,01,810

The aggregate quantity imported during the month was 14,57,064 maunds or 38·85 per cent. over the figures for the corresponding period of 1896, while the exports were only 3,65,922 maunds or 6·86 per cent. in excess. The staple food-grain of which the largest quantity was registered was rice: of this 35½ lakhs of maunds were imported against 26 lakhs in 1896, the export being 35½ against 38½ lakhs. The imports and exports of paddy were double the figures of 1896. The wheat trade showed a decrease in both cases, viz., in imports of 63,139 maunds and in exports of 6,693 maunds. Under gram and pulses both the imports and exports advanced by 1,10,165 maunds and 2,89,183 maunds respectively. In the case of "Other food-grains" the imports showed an increase of 39,908 maunds and the exports of 62,655 maunds.

The total trade of Calcutta and Howrah taken together, and of the districts in each division during the month of January 1897, is compared below with the totals of the corresponding month of the preceding year:—

Name of Division.	Rice.		Paddy.		Wheat.		Gram and pulses.		Other food-grains.		Total.	
	Import.	Export.	Import.	Export.	Import.	Export.	Import.	Export.	Import.	Export.	Import.	Exp.

Out of the above traffic, the total amounts received from, and carried to, foreign ports is shown in the following statement:—

Imports into Bengal from Foreign ports.

			Rice.	Paddy.	Wheat.	Gram and pulses.	Other food-grains.	TOTAL.
1			2	3	4	5	6	7
			Mds.	Mds.	Mds.	Mds.	Mds.	Mds.
Into Calcutta	{ 1896	..	20	3	46	69
	{ 1897	...	5	1	135	141
„ minor ports in Bengal.	{ 1896
	{ 1897
Total	{ 1896	..	20	3	46	69
	{ 1897	...	5	1	135	141

Exports from Bengal into Foreign ports.

		Rice.	Paddy.	Wheat.	Gram and pulses.	Other food-grains.	TOTAL.
1		2	3	4	5	6	7
		Mds.	Mds.	Mds.	Mds.	Mds.	Mds.
From Calcutta	{ 1896 ..	8,91,183	2,227	2,929	1,21,267	6,806	10,21,402
	{ 1897 ..	4,88,610	39	250	14,379	128	5,13,406
„ minor ports in Bengal	{ 1896 ..	1,60,427	404	64	1,61,290
	{ 1897 ..	88,951	96	41	89,087
Total	{ 1896 ...	10,52,005	2,227	2,929	1,21,661	6,870	11,85,692
	{ 1897 ..	5,77,561	39	250	14,474	169	5,92,493

As was expected, a decrease is noticeable in all the staples exported from Bengal to Foreign Ports, especially under rice, the shipments of which fell from 10½ lakhs of maunds to 5½ lakhs of maunds. The exports of gram and pulses were about 1/10th of those in 1896, owing to a decline in the despatches from Calcutta.

As regards the trade between Bengal and other Provinces in India, the following statement furnishes the necessary details :—

	IMPORTS INTO THE LOWER PROVINCES FROM OTHER PORTS OF INDIA.				EXPORTS FROM THE LOWER PROVINCES TO OTHER PORTS OF INDIA.			
	Into Calcutta.	Into Bengal Proper.	Into Bihar.	Total.	From Calcutta.	From Bengal Proper.	From Bihar.	Total.
1	2	3	4	5	6	7	8	9
Rice { 1896 { 1897	Mds. 20 9,19,847	Mds. 18,177 8,225	Mds. 1,890 14,144	Mds. 20,060 9,42,219	Mds. 2,52,055 5,84,385	Mds. 50,806 2,13,477	Mds. 55,170 24,227	Mds. 3,58,121 8,27,089
Paddy { 1896 { 1897	1,984 33,354	...	1,588 216	3,572 38,570	713 11,659	65 7,750	1,675 10,187	2,443 20,605
Wheat { 1896 { 1897	1,25,982 58,803	1,423 947	2,769 1,747	1,30,154 61,547	7,912 4,003	8,124 1,901	16,036 6,594

Other food-grains { 1896 { 1897	409 2,505	504 663	1,501 6,404	2,514 9,571	740 31,900	1,514 12,054	1,39,498 1,35,781	1,42,042 1,78,641
Total { 1896 { 1897	1,81,013 10,81,271	24,973 10,495	10,207 22,533	16,293 11,16,290	3,44,100 7,11,216	58,871 3,12,167	3,75,003 5,12,724	7,77,564 15,96,107

Both the imports and exports showed a considerable increase, viz., 9,00,016 maunds under imports and 8,18,543 maunds under exports. In the import trade the greatest fluctuations occurred under rice, which was imported largely; Burma alone contributing 9,16,870 maunds or 97·31 per cent. of the total trade. The largest decrease was in wheat owing to a smaller despatch from the North-Western Provinces and Oudh.

Out of the total exports shown above, the quantity despatched to the United Provinces alone amounted to 13,82,025 maunds, as against 3,48,363 maunds in the corresponding month of the previous year, as will be seen from the figures given below :—

ARTICLES.			EXPORTS TO THE NORTH-WESTERN PROVINCES AND OUDH.				TOTAL.
			From Calcutta.	From Bengal Proper.	From Bihar.		
					Patna Division	Bhagalpur Division.	
1		2	3	4	5	6	
		Mds	Mds.	Mds	Mds	Mds.

	{ 1897	2,419	870	1,121	4,410	
Gram and pulses	{ 1896	678	6,274	45,516	75,379	1,26,847	
	{ 1897	96,346	77,612	1,34,009	2,04,662	5,10,629	
Other food-grains	{ 1896	...	1,814	62,942	47,688	1,12,444	
	{ 1897	29,267	12,952	33,863	99,433	1,75,515	
Total	{ 1896	731	68,070	1,27,871	1,66,691	3,48,363	
	{ 1897	5,76,858	2,03,810	1,81,442	3,29,915	13,82,025	

The total export of rice from Bengal to Assam was 57,063 maunds against 26,653 maunds, Calcutta contributing 45,664 against 22,140 maunds. The consignments of gram and pulses and other food-grains sent to the Punjab aggregated 2,408 maunds against 1,402 maunds and 1,917 maunds against nil respectively.

Following the arrangement adopted in the preceding month, the internal traffic of these Provinces will be dealt with separately under the several heads noted below :—

- (1) Inter-district trade of Bengal Proper.
- (2) Trade between Bengal Proper and Bihar.
- (3) Inter-district trade of Bihar.

The following statement shows the total food-grain traffic under head (1) —

	1896. Mds.	1897. Mds.
Food-grains—		
Rice	23,02,892	21,50,969
Paddy	3,24,281	5,66,828
Wheat	12,007	17,402
Gram and pulses	2,58,596	3,46,195
Other food-grains	9,914	5,083
Total	29,07,690	30,86,477

The total increase was 1,78,787 maunds or 6.15 per cent.

The principal importing and exporting districts with the quantities imported or exported to each are shown in the following comparative statement:—

A trifling decrease of 41,408 maunds occurred in the imports, but the export trade showed an advance of 4,23,781 maunds which was due to large despatches of rice (3,84,572 maunds against 10,953 maunds) to the Patna Division, chiefly from the Burdwan Division and Calcutta.

The inter-district trade, division by division, of the Bihar Province is illustrated in the following abstract:—

ARTICLES.	LOCAL TRADE OF THE BIHAR PROVINCE.				TOTAL.
	Exports from the Patna Division.		Exports from the Bhagalpur Division.		
	Inter-district or local trade of the Division.	To Bhagalpur Division.	Inter-district or local trade of the Division.	To Patna Division.

... { 1897 ...	38,923	200	2,160	90,070	1,31,353
Total ... { 1896 ...	1,79,591	9,228	23,242	2,34,900	4,47,021
... { 1897 ...	1,01,089	1,207	25,327	3,12,157	4,42,780

The local trade of the Patna Division showed a falling off of 78,502 maunds, of which 69,287 maunds occurred in rice. The exports to the districts in the Bhagalpur Division also declined by 8,021 maunds mainly under the head "Other food grains" (6,681 maunds). The local trade of the Bhagalpur Division was practically unchanged, but the exports to the Patna Division showed an increase of 77,197 maunds, which is chiefly observable under other food-grains.

The mean pressure of the seven days	Inches.
The average pressure of the corresponding period for 24 years, Surveyor-General's Office	29.650
The total number of hours of bright sunshine	Hours, 65.6
The maximum possible number of hours of sunshine	91.8
The mean temperature of the seven days	90.4
The average temperature of the corresponding period for 24 years, Surveyor-General's Office	85.9
The extreme variation of temperature	23.8
The maximum temperature	104.6
The highest velocity of the wind in one hour	Miles, 15
The mean relative humidity	68
The average relative humidity of the corresponding period for 24 years, Surveyor-General's Office	73
The total fall of rain from 9th to 15th May 1897	Inches, 0.09
The average fall of the corresponding period for 24 years, Surveyor-General's Office	0.93
The total fall from 1st January to 15th May 1897	4.41
The average fall of the corresponding period for 24 years, Surveyor-General's Office	6.79

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph and from observations made at 6h., 10h., 16h and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph. The mouth of the rain-gauge is one foot above the ground.

o, overcast; p, passing temporary showers; t, thunder; < lightning

(a) Decrease of 4 miles is due to the exclusion of temporary mileage at Pale; a Ghat and revision of mileage between Gonda and Burhwal on 26th April 1897.

(b) Decrease in passengers is chiefly due to earnings having been high last year.

(c) Increase is due to brisker traffic.

(d) Includes 681 miles of ballast trains run on open line.

(e) Audited figures up to week ending 27th February 1897.

(f) 2,914 miles of ballast trains run on open line.

				<hr/>

Singhbhum.—Rainfall '50 at Chaibasa, '30 at Ghatsilla. Rice plentiful. Price of rice from 7 to 11½ seers per rupee.

General Summary. There were scattered showers of rain in the majority of the districts during the week, the fall being heavy in some of the northern districts and in Mymensingh. The general agricultural prospects continue favourable, but more rain is required in many districts. Autumn rice and jute are still being sown, and the sowing of winter rice and *bhadoi* crops has begun in some districts. Sugarcane, *china* and indigo are doing well. The harvesting of spring rice is still going on. The water-supply is reported to have improved in some districts, but in parts of the Chittagong and Chota Nagpur Divisions it is still very deficient. The price of common rice shows a further rise in some districts. In the distressed districts the prices of the staple food-grain on which the famine wage is based are—Nadia (common rice) 7½ seers, Murshidabad (common rice) 8½ seers, Khulna (common rice) 9 seers, Rajshahi (rice) 8 seers, Pabna (rice) 7 to 8½ seers, Shahabad (rice) 8 seers and (pea) 10½ seers, Saran (barley) 12 to 13 seers, Champaran (rice) 8½ seers and (maize) 9½ seers, Muzaffarpur (*makai*) 9½ seers and (*rahar*) 13 seers, Darbhanga (rice) 7½ seers and (*mikai*) 9 seers, Bhagalpur (common rice) 8 and 8½ seers and

SUPPLEMENT TO THE CALCUTTA GAZETTE, MAY 19, 1897.

(*marua*) 12½ and 13 seers, Sonthal Parganas (rice at Jamtara) 7½ to 8 seers, Puri (common rice) 10 to 12 seers, Hazaribagh (rice) 6 to 7½ seers, Manbhum (common rice) 7½ to 8 seers.

WATER-SUPPLY.

No. 3841 L.S.-G.—The 25th May 1897.—The following report of the progress made in the district of Bhagalpur in collecting and placing on record the chief facts regarding water-supply is published for general information.

H. H. RISLEY,
Secy. to the Govt. of Bengal.

No 153L., dated Bhagalpur, the 11th May 1897.

From—W. B. OLDHAM, ESQ., C.I.E., Commissioner of the Bhagalpur Division and Sonthal Parganas,

To—The Secretary to the Government of Bengal, Municipal Department.

In continuation of my No. 1098L., dated 13th January 1897, I have the honour to submit the following report regarding the water-supply in each district of this Division and the action taken to improve it for the quarter ending March 1897.

2. *Preparation of registers.*—In the Monghyr Municipality the prescribed registers are still being prepared from the reports made by the Ward Commissioners on the water-supply of the town.

3. In Bhagalpur the Local Boards have prepared registers for thanas Amarpur, Supaul, and Partabganj with the help of the local police. The registers for the remaining thanas are in course of preparation.

4. In Purnea forms I and II were reported to have been wrongly prepared, and were found defective. Revised forms of No. I for all the thanas in the Kishanganj subdivision have been received, and the Chairman of the Araria Local Board reports that Return No. II for 105 out of 159 villages have been revised. In the Sadar subdivision form No. II has been revised for all the thanas except Gondwara, and Register No. I is being compiled.

5. In Malda form No. II was completed by the District Board some time ago, and form No. I is in course of preparation.

The registers in forms I and II have since been prepared by the Old Malda Municipality.

6. In the subdivisions of Deoghur and Jamtara in the Sonthal Parganas it is reported that the registers in forms I and II prescribed by Government Circular No. 87 M., dated 15th May 1896, have been completed as far as was possible. In the Pakour subdivision a register in form No. II has been opened. In the Godda subdivision enquiries have been made in 50 villages regarding the existing sources of water-supply. The Deputy Commissioner has not yet received any report from the Subdivisional Officers of Rajmahal and Dumka.

7. *Water-supply and improvement.*—The Commissioners of the Monghyr Municipality have provided a sum of Rs. 800 in the current year's budget for water-works, and intend to sink a few more wells in the town. The town has, however, an ample supply of good drinking-water from the Ganges. The Magistrate has submitted no report as regards the District Board's area, but there is no scarcity of water-supply in any part of it.

8. It is reported that the question of taking steps to improve the existing sources of water-supply will be considered by the Bhagalpur District Board as soon as the information called for from the Local Boards is received. In the town of Bhagalpur itself the water-works extension has been completed, and all the wards are now supplied with filtered water.

9. In Purnea, since the submission of the last report, three more estimates have been sanctioned for repair and renewal of the existing wells on the roadsides.

10. In Malda Rs. 220 were spent during the quarter in re-excavating a tank at Parbatipur in the high land tract. This work was not completed at the close of the quarter. Arrangements were made for digging a new tank at Maharajpur, and for re-excavating tanks at Nachol, Nazirpur, and Pandua. During the quarter zamindars re-excavated a large number of tanks, thus relieving and helping the Board. No steps were taken in either of the little municipalities—English Bazar and Old Malda, which stand on the Mahananda, the water of which is always excellent. One pukka well, however, is being reclaimed in the former Municipality, and in the latter an attempt has been made to induce the Raja Shoshi Shikhar Roy of Tahirpur to cleanse his tank (Babakar), which occupies a central position in the town.

11. The Municipal Commissioners of Deoghur in the Sonthal Parganas have resolved to sink a public municipal well in the hospital compound and to deepen the school well.

The Manager of the Rohini estate under the Court of Wards has been applied to to repair the Haridrakund tank.

The Manager of the Lachmipur estate has similarly been applied to for thorough repairs to the "Bhairab Talao" at a rough estimated cost of Rs. 800.

12. The Deputy Commissioner reports that for Deoghur and Jamtara subdivisions the water-supply is said to be sufficient for the wants of the population. Besides tanks and wells, there are in Jamtara numerous springs, water-courses and rivers, which, if uncontaminated, would provide wholesome and abundant water to the people. Steps are being taken to put a stop to the practice of contaminating these sources by the cremation of dead bodies.

13. In Deoghur Babu Ram Charan Singh Ghatwal wishes to vest his tank "Jamuna" in mauza Bamangama in the Deputy Commissioner as representing Government.

14. The Subdivisional Officer of Godda has, it is reported, taken steps to improve the tanks, bandhs, and wells which were found to be defective.

REPORT ON THE STATE OF THE SALT MARKET FOR THE FOURTH QUARTER OF 1896-97.

No 386B., dated Calcutta, the 17th May 1897.

From—H. LUSON, Esq., I.C.S., Offg. Secretary to the Board of Revenue, L.P.,
To—The Secretary to the Government of Bengal, Financial Department.

I AM directed to submit the following report on the state of the salt market for the fourth quarter of 1896-97, comprising the months of January, February and March 1897.

SALT.

THE HON'BLE MR. W. H. GRIMLEY.

2. The quantity of salt of every description cleared during the quarter under review, amounted to 26,63,599 maunds, as compared with 24,40,628 maunds in the previous quarter, and 24,00,904 maunds in the corresponding quarter of the previous year; and the net amount of duty levied thereon was Rs. 63,09,759, against Rs. 57,12,378 in the previous quarter, and Rs. 54,88,437 in the corresponding quarter of the previous year. (In all cases fractions are omitted.)

3. The quantity of locally-made salt removed from the *golas* in Orissa during the quarter under review, and the quantity which remained in store at the close of the quarter, are shown in Table I below :—

TABLE I.

1	2
	Puri.
	Mds.
Balance at the close of the previous quarter ...	4,16,277
Manufactured or added during the quarter
Total ...	4,16,277
Sold during the quarter ...	2,688
Wastage
Total ...	2,688
Balance at the close of the quarter ...	4,13,589

The total sales of locally-made salt during the quarter under review, amounted to 2,688 maunds, as compared with 9,272 maunds in the previous quarter, and 19,275 maunds in the corresponding quarter of the previous year. Duty was paid during the quarter on the full quantity sold.

4. The subjoined Table II shows in detail the importations into the port of Calcutta and the total clearances of sea-imported salt during the quarter under

review, as compared with the figures of the corresponding quarters of the previous two years:—

7. The quantity of salt despatched by the East Indian Railway to stations beyond Buxar during the quarter under review, amounted to 3,747 maunds and 20 seers, as noted in the margin, against 11,991 maunds and 10 seers in the previous quarter, and 33,347 maunds and 10 seers in the corresponding quarter of the previous year.		
January	...	Mds. s. 749 20
February	...	1,873 30
March	...	1,124 10
Total	...	3,747 20

8. The quantity of saltpetre removed from the refineries during the quarter on payment of duty, amounted to 13,333 maunds, against 6,982 maunds in the previous quarter, and 12,134 maunds in the corresponding quarter of the previous year.

9. The shipments of Liverpool salt for the port of Calcutta, according to the published market reports, were as follows:—

				Tons.
January	15,140
February	7,510
March	37,810
Total	60,460

It is reported that two sailing vessels were *en route* for Calcutta at the close of the quarter, with 3,900 tons of salt from Hamburg.

10. Table V shows the average wholesale price per 100 maunds of Liverpool and other descriptions of salt during each fortnight of the quarter under review:—

STATISTICAL DEPARTMENT,
The 25th May 1897.M. FINUCANE,
Secretary to the Government of Bengal.

STATISTICS OF THE SEA-BORNE TRAFFIC OF CALCUTTA IN FOOD-GRAINS.

No. 1267 Statistics.—The following memorandum and statements are published for general information.

STATISTICAL DEPARTMENT,
The 25th May 1897.

M. FINUCANE,
Secy. to the Govt. of Bengal.

Memorandum.

The sea-borne import and export traffic of Calcutta in food-grains during the week ending the 14th May 1896, and the corresponding period of 1897, is shown in the following statement:—

		8TH TO 14TH MAY			
		1896.		1897.	
1		2	3	4	5
		Cwts.	Mds.	Cwts.	Mds.
<i>Imports.</i>					
From Foreign Ports	...	46,734	63,610	292,795	3,98,526
„ Indian „	...	46,734	63,610	292,795	3,98,526
Total	...	46,734	63,610	292,795	3,98,526
<i>Exports.</i>					
To Foreign Ports	...	32,390	41,086	9,621	13,095

Other food-grains, such as jowar, barley, oats, &c.
Total	...	46,734	63,610	292,795	3,98,526

Imports.—The total imports of rice during the week ending the 14th May 1897 amounted to 233,058 cwts. against 37,176 cwts. in the corresponding period in 1896. Of this quantity, Burma contributed 199,998 cwts., Chandbally 24,501 cwts., Balasore 8,076 cwts., and Madras 483 cwts. Owing chiefly to the import of 56,057 cwts of paddy from Burma, the figures under that head rose from 9,558 cwts. to 56,822 cwts. The imports of gram and pulse were 2,903 cwts. against nil in the corresponding week of 1896, Chandbali contributing 2,505 cwts. and Rangoon 403 cwts.

Exports.—In the following statement the total quantity of each kind of food-grain exported by sea during the week ending 14th May 1897 is compared with the figures for the corresponding period of 1896:—

1	8TH TO 14TH MAY.

Paddy	1,327	1,806
Wheat	5,783	7,871	536	729
Gram and pulses ..	19,551	26,615	4,123	5,612
Other food-grains, such as jowar, barley, oats, &c.	689	938	127	173
Total ...	53,953	73,136	13,822	18,813

The exports of rice from Calcutta to foreign ports declined from 16,309 cwts. in the second week of May 1896 to 8,649 cwts. in the period under report. During the week ending 14th May 1897, Natal took 3,066 cwts., while in the week under report nothing was sent to that port; Ceylon received 2,786 cwts., against 5,963 cwts. in the corresponding week of last year. An increase, however, occurred in the shipment to United Kingdom, viz., 5,861 cwts. against 3,149 cwts. In paddy there was no trade against 1,097 cwts. in the week ending 14th May 1896. The decline in the wheat trade was almost entirely owing to there being no shipments to the United Kingdom, against 5,005 cwts. in the week ending 14th May 1896. The exports of gram and pulse to the United Kingdom diminished from 9,603 cwts., in the corresponding week of 1896, to only 206 cwts. in the week under review.

The falling off of 9,901 cwts. in the exports of rice to Indian ports, viz., from 10,291 cwts. to 337 cwts., was due to a decrease of 6,502 cwts. in the shipments to Bombay, and of 2,987 cwts. to Madras ports. The trade in gram and pulse was one-third that of 1896, viz., 3,361 cwts. against 9,630 cwts., the decline being chiefly due to the exports to Bombay having diminished by 5,292 cwts. The variations in the other heads are unimportant and call for no remarks.

Detailed statements showing the sources of supply and the places of destination, both as regards Foreign and Indian ports, are given below:—

STATISTICS OF THE SEA-BORNE TRAFFIC OF THE MINOR PORTS
IN BENGAL IN FOOD-GRAINS.

No. 1258 Statistics.—The following memorandum and statements are published for general information.

STATISTICAL DEPT.,
The 25th May 1897.

M. FINUCANE,
Secy. to the Govt. of Bengal.

Memorandum.

The comparative statements below give statistics of the import and export trade of the minor ports of Chittagong, Narayanganj, Balasore (including both Balasore and Chandbali), Cuttack and Puri during the week ending 21st April 1897, as compared with the trade of the corresponding period of 1896 :—

IMPORTS.

Ports.			From Foreign ports.	From Indian ports.	Total.	
					Cwts.	Mds.
Chittagong ...	{ 1896	208	208	283
	{ 1897	13,168	13,168	17,950

EXPORTS.

Ports.			To Foreign ports.	To Indian ports.	Total.	
					Cwts.	Mds.
Chittagong ...	{ 1896	1,096	1,096	1,492
	{ 1897	3	3	4
Narayanganj ...	{ 1896	36	36	49
	{ 1897
Balasore ports...	{ 1896	27,116	27,116	36,908
	{ 1897	38,218	38,218	52,019
Cuttack ...	{ 1896	...	2,880	32,246	35,126	47,810
	{ 1897	...	46,484	46,484	63,270
Puri ...	{ 1896	...	6,029	1,408	7,437	10,122
	{ 1897
Total ...	{ 1896	...	8,909	61,902	70,811	96,381
	{ 1897	...	46,484	38,221	84,705	1,15,293

Owing chiefly to the receipts of rice and paddy from Burma, Chittagong showed a rise of 12,980 cwts. The falling off of 1,093 cwts. in the export trade of Chittagong was principally due to the cessation of despatches of rice to Cochin. The absence of exports of rice to Columbo, Cochin and Bombay accounts for the decline in the trade of Puri, while that of Balasore and Cuttack improved by 11,102 cwts. and 11,358 cwts., respectively, mainly on account of larger despatches of rice to Calcutta and Mauritius.

Detailed statements showing the sources of supply and the places of destination, both as regards Foreign and Indian ports, are given below:—

EXPORTS OF FOOD-GRAINS BY THE EAST INDIAN RAILWAY.

No. 1265 Statistics.—The following statement shows the quantity of rice and other food-grains exported by the East Indian Railway from Calcutta and Howrah during the period from 1st January to 15th May 1897, both days inclusive, to have been 50,94,878 maunds. The destination of 49,02,678 maunds is specified. About half of this quantity (22,12,626 maunds) was carried to the North-Western Provinces and Oudh, about one-third (17,07,449 maunds) to stations in Bengal, and the rest (9,82,603 maunds) to other provinces. In the last week of the period 76,168 maunds were exported to the North-Western Provinces and Oudh, and 1,47,663 maunds to Bihar.

M. FINUCANE,
Secy. to the Govt. of Bengal.

STATISTICAL DEPARTMENT,
The 25th May 1897.

Statement showing the quantities of rice and other food-grains exported from Howrah and Calcutta (Chitpur, Kidderpur Docks, and Port Trust Railway) by the East Indian Railway from 1st January to 15th May 1897.

STATION TO WHICH CONSIGNED.	Total from 1st to 30th January 1897.	Total from 31st Janu- ary to 27th February 1897.	Total from 28th Febru- ary to 27th March 1897.	Total from 28th March to 24th April 1897.	Week ending 1st May 1897.	Week ending 8th May 1897.	Week ending 15th May 1897.

**EXPORTS OF FOOD-GRAINS BY THE EASTERN BENGAL STATE
RAILWAY.**

No. 1266.—Statistics.—The following statement shows the quantity of rice and other food-grains exported by the Eastern Bengal State Railway from Sealdah and Calcutta during the period from 1st January to 8th May 1897, both days inclusive, to have been 3,11,571 maunds. The destination of 3,09,940 maunds is specified. A little less than three-fourths of this quantity (2,31,462 maunds) was carried to stations in Bengal Proper, and 12,628 maunds to Bihar and Chota Nagpur, about one-eighth (36,465 maunds) to the North-Western Provinces and Oudh, a little over one-eleventh (27,080 maunds) to places in Assam and the rest (2,305 maunds) to other provinces.

M. FINUCANE,
Secretary to the Govt. of Bengal.

STATISTICAL DEPARTMENT,
The 25th May 1897.

Statement showing the quantities of rice and other food-grains exported from Sealdah and Calcutta (Port Trust Railway, Chitpur and Kidderpore Dock), by the Eastern Bengal State Railway, from 1st January to 8th May 1897.

WEATHER AND CROP REPORT.

For the week ending the 24th May 1897.

Burdwan.—Rainfall at Sadar 2·60, Kalna 1·80, Katwa 1·39, Raniganj ·34. Ploughing and sowing going on. More rain wanted in Raniganj. Condition of cattle good. Fodder sufficient. Common rice selling as follows:—

			Srs. c.	Srs. c.	
Sadar	8 8 to 11 0	} per rupee.
Kalna	8 8 to 9 0	
Katwa	8 8 to 9 0	
R. niganj	8 8 to 9 0	

Birbhum.—Rainfall at Sadar 1·38, Rampur Hat 1·16. Weather hot, cloudy in the evening. The rain has facilitated ploughing, which continues. Fodder sufficient. Price of common rice at Sadar 8½ seers and Rampur Hat 8½ to 10 seers per rupee.

Bankura.—Rainfall at Bankura 1·55, Onda 2·29, Raipur ·91, Sonamukhi ·07, Khatra 2·25, Maliara ·57, Indas ·45, Vishnupur ·90, Gangajalhati ·99. Weather very hot and occasionally cloudy and stormy in the afternoon. The rainfall has benefited the *till* crop and sugarcane and facilitated ploughing. Common rice is selling at 10 seers per rupee at Bankura and Vishnupur, 9 seers in Gangajalhati, 8½ seers in Majia and Sonamukhi, 8 seers in Saltora, 8½ seers in Simlapal. Numbers on relief—

		Men.	Women.	Children.	Total.
Test-workers	...	345	65	1	411
Otherwise relieved	...	207	347	277	831
Total					1,242

Sonamukhi figures said to be incomplete.

Midnapore.—Rainfall at Sadar 2·18, Contai ·31, Tamluk ·09, Ghatal 1·21. Weather unsettled. More rain wanted in Contai, Tamluk and Ghatal subdivisions. Sowing of *aus* and *aman* continues. Prospects of indigo and *boro* not good. Cattle-disease reported from Binpur, Narsingah, Keshpur, Benapura, and Basudebpur. Fodder and water sufficient. Common rice selling as follows:—

				Srs. c.	
Sadar	10 0	} per rupee.
Contai	9 to 12 0	
Tamluk	9 0	
Ghatal	9½ to 10 0	

Hooghly.—Rainfall at Sadar ·69, Serampore 1·18, Jahanabad ·73. Sugarcane doing well. Ploughing and sowing continues. Rice sells at 7 to 9 seers 3 chitaks per rupee.

Howrah.—Rainfall ·91. Weather seasonable. Sowing of jute and *aus* still going on. Fodder sufficient. Want of water reported from thanas Bagman and Amita, and from Mandalghat and Singti outposts in the Ulubaria subdivision. Common rice sells at 8½ to 10 seers per rupee.

24-Parganas.—Rainfall at Sadar 1·09, Barasat 1·01, Basirhat 1·20, Diamond Harbour ·40. Weather very hot; stormy and cloudy. Prospects favourable, but more rain is wanted in places. Sowing of *aus* and jute still going on. No cattle-disease. Fodder sufficient. Water insufficient in places. Common rice sells as follows:—

				Srs. c.	
Sadar	8 to 10 0	} per rupee.
Barasat	8 4	
Basirhat	9 0	
Diamond Harbour	8 6	

Nadia.—Rainfall at Sadar ·79, Kushtia 1·48, Moherpur 1·04, Chundanga 1·65, Rana-ghat ·90. Prospects of *aus* paddy, sugarcane, and indigo good. Water-supply improved. Fodder sufficient. Common rice sells from 7 to 9 seers per rupee. Latest price of rice where test-works are open is 7½ seers per rupee. Numbers on relief on Saturday, 22nd May—

		Men.	Women.	Children.	Total.

Singhbhum.—Rainfall at Chaibasa 70, Ghatsilla 15. Rice plentiful. Price 8 to 12 seers per rupee.

General Summary.—There was more or less rain in almost all districts during the week, the falls in the eastern districts being heavy. The rain has facilitated ploughing and sowing, which are going on everywhere. More rain is still required in several districts. The prospects of sugarcane and indigo are generally good, and the early rice and jute where sown are coming on well. The harvesting of *boro* or spring rice is almost over. The water-supply is said to have generally improved, but is still deficient in parts. The price of rice shows but little change during the week. In the distressed districts the prices of the staple food-grain on which the famine wage is based are—Nadia (common rice) 7½ seers, Murshidabad (common rice) 8½ seers, Khulna (common rice) 9 seers, Rajshahi (common rice) 8 seers, Pabna (rice) 7 to 8½ seers, Shahabad (rice) 8 seers and (pea) 10½ seers, Saran (barley) 12½ seers, Champaran (common rice) at Motihari 8½ seers and Bettiah 7½ seers, and (maize) at Motihari 10½ seers, Muzaffarpur (*makai*) 9½ seers and (*rahar*) 12½ seers, Darbhanga (common rice) 7½ seers and (*makai*) 9 seers, Bhagalpur (common rice) 8 seers and

(*marua*) 13 seers, Sonthal Parganas (rice at Jamtara) 7½ to 8 seers, Puri (common rice) 10 to 12 seers, Hazaribagh (rice) 6 to 7½ seers, Palamau (rice) 9 seers, Manbhum (common rice) 7½ to 8 seers.

The mean pressure of the seven days	Inches.
The average pressure of the corresponding period for 24 years, Surveyor-General's Office	29.620
The total number of hours of bright sunshine	Hours.
The maximum possible number of hours of sunshine	51.8
The mean temperature of the seven days	87.7
The average temperature of the corresponding period for 24 years, Surveyor-General's Office	86.5
The extreme variation of temperature	25.0
The maximum temperature	97.2
The highest velocity of the wind in one hour	Miles.
The mean relative humidity	74
The average relative humidity of the corresponding period for 24 years, Surveyor-General's Office	73
The total fall of rain from 16th to 22nd May 1897	Inches.
The average fall of the corresponding period for 24 years, Surveyor-General's Office	0.45
The total fall from 1st January to 22nd May 1897	1.00
The average fall of the corresponding period for 24 years, Surveyor-General's Office	4.86
	7.79

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h., 10h., 16h and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kow Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph. The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; p, passing temporary showers; t, thunder; < lightning,
d, drizzling rain.

METEOROLOGICAL OFFICE, GOVT. OF INDIA,
Calcutta, the 24th May 1897.

J. H. GILLILAND,
For Meteorological Reporter to the Govt. of India.

DISTRESS IN PATNA AND OTHER DIVISIONS.

No. 1220 (Fam.).—The 27th May 1897.—The following papers are published for general information.

M. FINUCANE,
Secretary to the Government of Bengal.

No. 299 $\frac{T.R.}{(Fam.)}$, dated Darjeeling, the 19th May 1897.

From—M. FINUCANE, Esq., Secy. to the Govt. of Bengal, Revenue Dept.,
To—The Secretary to the Government of India, Revenue and Agricultural Dept.

IN continuation of this Government's letter No. 1132—Fam., dated the 15th April 1897, I am directed to submit the following report, under section 29 of the Bengal Famine Code, on relief operations in this Province during the month of April. This report has been delayed in consequence of delay in the submission of the report of the Commissioner of Patna for the second-half of April. Unlike the reports of the other Divisions, which are up to the 24th April, the report of the Patna Division for the second-half of the month deals with the three weeks ending 1st May, and the figures collected and compiled involved much extra labour in the Commissioner's and the district offices. Besides this, the report for the district of Darbhanga, which is now the worst district in Bengal, was not received by the Commissioner till the 12th May, in consequence of the misbehaviour of a messenger, and the Commissioner's report reached this office on the evening of the 15th idem. I am to enclose a copy of the report of the Commissioner of the Patna Division, No. 1015F.G., dated the 21st April 1896, with enclosures, for the first-half of the month. Copies of his report No. 1158F.G., dated the 11th May, with enclosures, for the second-half of April, will be sent from Calcutta as soon as it is printed. I am also to enclose maps of the districts of Palamau, Manbhum, Nadia, Khulna, Murshidabad, the Sonthal Parganas and Puri, showing the tracts affected during the period under report. A consolidated map for the Patna Division will be submitted later.

2. *Patna Division.*—The condition of the districts of Patna and Gaya continued good as before. There was rain in these districts during the period under report. It was beneficial to the standing crops, and improved the supply of fodder and the prospects of the *bhadai* crops, without doing any material damage to the *rabi*, as the work of harvesting it had been almost completed. The outturn of this crop has been good in both districts. The *mahua*, which is an important crop in the district of Gaya, specially in the south, is reported to have been better than it was last year. Prices, specially in the case of common rice, had a tendency to rise, but this was as might be expected at this time and under the special circumstances of the year. The Bankipore poor-house in the district of Patna, and the poor-houses and kitchens along the Grand Trunk Road in the district of Gaya, continued to be kept open, the average daily number in the second-half of the month being 111 persons in the former, and 539 in the poor-houses and kitchens in Gaya, including a kitchen kept by a *mahant*. Public health was exceptionally good in the Gaya district, and in Patna it was fair, except that cholera and small-pox had broken

out, as is usual in this season of the year, in the Patna city and in certain parts of the Barh and Bihar subdivisions. No loans were given in these districts for village works under the modified rules under the Land Improvement Loans Act.

The following paragraphs deal with the main features of famine relief in the districts of Shahabad, Saran, Champaran, Muzaffarpur and Darbhanga, which continued to be the severely distressed districts in the Patna Division.

3. *Rainfall and prospects of crops.*—The rainfall during the period under report was as follows:—

					Inches.
SHAHABAD	{	Sadar	86
		Bhabhua	58
		Sasaram	75
		Buxar	12
SARAN	{	Chapra	19
		Siwan	02
		Gopalganj	47
		Motihari	58
CHAMPARAN	{	Bettiah	11
		Barharwa	07
		Bagaha	06
		Muzaffarpur	41
MUZAFFARPUR	{	Hajipur	13
		Sitamarhi
		Sadar	46
DARBHANGA	{	Madhubani	16
		Samastipur	99

During the first-half of the month the fall was slight, except in Shahabad and Champaran. In the former district it did some slight damage to the *rabi* on the threshing-floor, but on the other hand greatly benefited sugarcane and *cheena*. In Champaran rain fell on the 6th April, accompanied by heavy hail in parts of the Bettiah and Dhaka thanas, and in the former place is reported to have done great injury to an excellent *rabi* crop; this crop in Champaran being later than in other districts in North Bihar, a good deal of it was still standing. In every part of the district the rain greatly injured the indigo, which in most factories has this year had to be sown two or three times. There was rain in all districts on the 20th and 21st April, and in most on the 28th, it being heaviest in Champaran and Darbhanga. It is reported to have been everywhere entirely beneficial except to the indigo crop. The Commissioner reports that the prospects of the crops are excellent.

4. *Estimated area and population affected.*—There was no change under this head in the districts of Muzaffarpur and Darbhanga.

Shahabad.—In consequence of a revision of the areas, and the addition of two new tracts to that portion of the Rhotas plateau which lies in the Sasaram subdivision, and a narrow strip of land south of Akbarpur between the Sone and the Rhotas plateau, which were previously reported to be under observation, the total distressed area in the district has been raised to 1,632 square miles, with a total population of 382,000.

Saran.—The full *rabi* harvest reaped in this district has reduced the extent of distress in the Siwan subdivision, and the Collector now reports the affected total area to be 1,512 square miles with a population of 1,416,000, against 1,684 square miles with a population of 1,484,000 previously reported.

Champaran.—The total extent of distressed area in this district remained the same as before, but the area classed as slightly affected has deteriorated with the cessation of the employment afforded by the *rabi* harvest and the prolongation of famine conditions. Of the total affected area of 2,593 square miles, 2,100 square miles with a population of 1,184,000 are now reported to be seriously affected, and the remaining 493 square miles with a population of 370,000 are slightly affected.

5. *Numbers on relief.*—As was expected, the special feature of the period under report has been a general rise in the numbers on relief. The following table shows the numbers and the percentages of population on relief under

all heads in the several districts in comparison with the numbers and percentages since the middle of February :—

DISTRICT.	18TH FEBRUARY.		27TH FEBRUARY.		15TH MARCH.		27TH MARCH.		10TH APRIL.		1ST MAY.	
	Numbers on relief.	Percentage on population of affected tract.	Numbers on relief.	Percentage on population of affected tract.	Numbers on relief.	Percentage on population of affected tract.	Numbers on relief.	Percentage on population of affected tract.	Numbers on relief.	Percentage on population of affected tract.	Numbers on relief.	Percentage on population of affected tract.
1	2	3	4	5	6	7	8	9	10	11	12	13
Shahabad	3,227	86	5,065	18	17,863	48	24,732	685	32,639	877	30,858	87
Saran	33,709	251	39,891	289	58,377	283	44,171	209	57,189	385	78,987	527
Champanan	147,712	1519	170,251	1533	205,486	185	181,429	1088	147,414	948	139,079	894
Muzaffarpur	26,891	10	30,85	185	51,990	313	80,768	368	88,012	531	113,983	683
Darbhanga	2,0,078	881	160,511	740	180,467	748	202,84	89	216,650	954	234,175	1048
Total	411,417	621	415,293	613	483,483	714	401,411	676	542,589	739	597,021	823

The figures for the district of Saran include the numbers relieved by the Hatwa Raj, and those for Muzaffarpur and Darbhanga include figures for the relief operations conducted by the Darbhanga Raj. There is a rise everywhere except in Champanan, where the numbers and the ratio have been falling steadily since the 13th March. The drop in Champanan is attributed to the harvesting of *rabi* crops which are reaped later there than in other districts, and to field operations for the next *bhadoi* crops. It is also probably to some extent due to stricter enforcement of task-work and of the labour test generally.

6. *Relief works.*—The number of works open at the end of the month was as follows:—

		Under the Public Works Department.	Under Civil Officers.	Total.
Shahabad	7	7
Saran	...	6	33	39
Champanan	...	27	54	81
Muzaffarpur	...	20	74	94
Darbhanga	...	44	108	152
Total	...	97	276	373

The total number of works open at the end of March was 322, of which 87 were under the Public Works Department and the rest under civil officers. The Public Works Department are much hampered by the difficulty of obtaining qualified subordinates, and have not made much progress in taking over or opening large works. During the period under report two important canals, the Tribeni and Dhaka Canals, which will employ large numbers of relief-workers, have been taken in hand by that Department in the district of Champanan. The remarks of the Government of India on the large number of works open in North Bihar, contained in paragraph 5 of Mr. Holderness' letter No. $\frac{1110F}{7-14}$, dated the 4th May 1897, have been communicated to the Commissioner, and the Lieutenant-Governor's views on the subject will be submitted to the Government of India on receipt of Mr. Bourdillon's reply.

The following statement compares the numbers on Government relief works at the end of March with those at the end of April:—

DISTRICT.	MEN, WOMEN AND CHILDREN TAKEN TOGETHER.				AVERAGE DAILY NUMBER OF ADULT MALE UNITS.					
	27th March.		1st May.		Half-month ending 27th March.			Half-month ending 1st May.		
	Number.	Percentage of population of affected area.	Number.	Percentage of population of affected area.	Task work.	Daily wage.	Total.	Task work.	Daily wage.	Total.
1	2	3	4	5	6	7	8	9	10	11
Shahabad	6,215	107	6,046	189	3,613	285	3,998	5,558	811	6,369
Saran	12,444	9	23,094	183	7,419	1,057	8,476	11,790	2,704	14,494
Champanan	91,995	59	70,947	450	76,300	6,399	82,705	48,910	12,344	61,254
Muzaffarpur	27,011	102	53,325	321	17,365	2,072	19,437	59,219	10,685	43,904
Darbhanga	108,502	48	137,673	87	60,920	5,136	66,056	73,875	21,280	95,155
Total	251,227	83	282,047	89	155,623	14,948	170,571	178,350	47,824	226,174

The numbers on relief works, taking men, women and children together, increased in all districts except Champaran. The reason why the numbers in Shahabad do not show any considerable increase, notwithstanding that the area of distress has extended, is principally that two roads which employed a large number of labourers have been closed. One has been finished and the other (Hata-Dargaoti Road) has been stopped because it was close to the Gaya-Mogulserai Railway line. The railway authorities have raised their rate to Rs. 2-8 per 1,000 cubic feet, which has resulted in a considerable increase in the number of their labourers. During the week ending 1st May, the number employed on the railway was 10,231. The local officers of Government have been instructed not to retain or open any relief work which, being close to the railway, would compete with it. The proportion of male units on daily wage, irrespective of task, as compared with the corresponding number on task-work, shows an increase, but this is due mainly to the inclusion for the first time under the former head of payments made for the Sunday wage.

The average reported outturn of work, cost rate and wages were as follows:—

DISTRICT.	AVERAGE DAILY WAGE OF ADULT MALE UNIT.				AVERAGE OUTTURN OF WORK PER ADULT MALE UNIT ON TASK-WORK.		COST RATE PER 1,000 C. FT.	
	Second-half of March.		Second-half of April.		Second-half of March.	Second-half of April.	Second-half of March.	Second-half of April.
	Task-work.	Irrespective of task.	Task-work.	Irrespective of task.				
	2	3	4	5	6	7	8	9
	A. P.	A. P.	A. P.	A. P.	C. ft.	C. ft.	Rs. A. P.	Rs. A. P.
Shahabad	1 9	2 0	1 6	1 10	42	38	2 10 9	2 7 7
Saran	1 5½	1 10	1 3½	1 6	38½	32½	2 6 8½	2 9 5
Champaran	1 6½	1 10	1 6½	1 8	25½	31	3 11 0½	3 1 7
Muzaffarpur	1 4	1 8½	1 5	1 8	49	56½	1 11 8	1 10 2
Darbhanga	1 4	1 7½	1 6	1 6	31½	39½	2 11 11	2 7 0

This shows in three districts a satisfactory rise in the daily average outturn of work and in four a fall in the cost rate. The differences in cost rates between the several districts are also diminishing. The cost rates reported are so low as to suggest doubts of their correctness. The Commissioner is taking special measures to test their accuracy. On the whole, the works were carried on smoothly and satisfactorily. Seven military officers have joined and about 60 British non-commissioned officers and privates have also arrived, and have been posted to the four North-Gangetic districts.

7. *Private relief works.*—In Shahabad private works, which consisted of tanks and irrigation channels, are reported to have been employing 1,678 persons daily. The Hatwa Raj had nine works open in the Gopalganj subdivision of Saran, and the total number employed on them on 1st May was 4,708. An additional number of about 2,500 were employed in the Sadar, Gopalganj and Siwan subdivisions on tanks and wells undertaken by private individuals with loans given under the modified rules under the Land Improvement Loans Act. The Darbhanga Raj had several works open in Muzaffarpur and Darbhanga as before, and the number employed on them was 2,634 in Muzaffarpur on the 28th April, and 16,534 in Darbhanga on the 1st May.

8. *Poor-houses and kitchens.*—There were 25 Government poor-houses open in April against 21 in March. The four poor-houses of the Hatwa Raj and the Manjha poor-house in the district of Saran and the Darbhanga Raj poor-house in the district of Muzaffarpur continued to do good work.

As regards kitchens maintained by Government, there were 5 in Shahabad, 11 in Champaran, and 26 in Muzaffarpur. The Collector of Darbhanga has noticed that children are not being properly fed, and at the date of the report was about to open kitchens for them. The Collector of Saran also reports that he is arranging for cooked food to be given to children on the large relief works who are treated as dependants.

9. The following table shows the numbers on gratuitous relief and the daily doles in comparison with the corresponding figures for March :—

DISTRICT.	ON 27TH MARCH.		1ST MAY.		AVERAGE DOLE PER ADULT UNIT.	
	Total number.	Percentage of population of affected area.	Total number.	Percentage of population of affected area.	Second-half of March.	Second-half of April.
1	2	3	4	5	6	7
Shahabad	17,225	4.63	22,517	5.08	A. P. 0 10	A. P. 0 10
Saran	27,319	1.24	50,849	3.59	0 8	0 7

Darbhanga ..	5.7	3.49
Whole Division...	3.9	3.9

The numbers on gratuitous relief, which include dependants of relief workers, are large in comparison* with the numbers on relief works. This is specially noticeable in the case of Shahabad and Saran. The Collector of Shahabad explains the highness of the numbers on gratuitous relief in his reports for the

first-half of February and of March thus :—

“At present acute distress is chiefly confined to the pauper population and to the lower strata of the labouring classes. The pauper population in this subdivision (Bhabhua) is large, and its number is swelled by a number of adult males wholly or partially crippled in their legs, many of them still in early manhood or the prime of life. Men in this state are to be found in most villages: in one village of 60 houses I found no fewer than 14. The disease, whatever it is, is prevalent in this part of the country, and appears to come from an over-diet of khasari. The physique of the pauper and lower labouring classes, especially among the children, has got very low, and there are a certain number of adult men and women who in their present condition are hardly fit for work, though later on they may become so. I anticipate, therefore, that our gratuitous relief lists will be rather large to begin with, and the number on them in this month and next will be from 12,000 to 15,000.

“There is always a stream of travellers up and down the Grand Trunk Road, and this year there has been some increase owing to the scarcity up-country. There has been a very large emigration of men from the Bhabhua subdivision to the east in search of work. Every year this emigration takes place, but it has doubtless been intensified this year by the approach of distress. It may also be noted that in ordinary years very little attention is paid to this matter, while this year the subject has been forcibly impressed upon our notice, and it is found that the number of women and children left by their husbands and fathers is very large indeed. It is almost impossible to obtain figures, nor could much reliance be placed upon what figures were given. It remains to be seen whether these men will return home when the *rabi* harvest is over. If they do, the difficult problem of finding work for all the women and children, who can carry but not dig, will be more easily soluble. In Sabar outpost in the Sadar subdivision, about 150 men are reported to have gone to Eastern Bengal in search of employment. Some needy persons have come from Balliah and Azamgarh districts to the Dumraon thana jurisdiction, and find employment in the *rabi* harvest. When this is over, they will return to their respective districts.

In Saran large numbers of able-bodied men are reported to have temporarily emigrated to Eastern Bengal, leaving their families behind, who in consequence of the high prices have to be provided for by the State. Further and constant checking of the lists of gratuitous relief, and the introduction of the system of piece-work lately sanctioned for certain large works and in certain local areas, will, it is hoped, have the effect of reducing the present numbers of gratuitous relief in some of the districts of North Bihar as well as in other parts of the Province. The remarks conveyed in paragraphs 2, 3 and 4 of Mr. Holderness' letter No. ^{1191F} 7-14, dated the 4th May 1897, have been communicated to the officers concerned, and a further communication will be made on the subject when their reports are received.

There is still some variation in the average dole, which continues to be lowest in Saran and highest in Champaran.

10. *Physical condition of the people, &c.*—Public health and the physical condition of the people continued to be generally good. The death-rate in the affected tracts in Shahabad was higher than usual in consequence of the prevalence of small-pox throughout the whole of the Bhabhua subdivision and the Chenari outpost of the Sasaram subdivision. The total number of deaths in the affected area in March 1897, caused by small-pox, amounted to 270 against 11 in the corresponding month of the previous year. The condition of the cattle was fairly good, except in the Bhabhua subdivision of the district of Shahabad, where the supply of fodder and water is said to be deficient. Cattle disease is reported from Darbhanga.

11. *Loans.*—The following table shows the advances made for village works under the modified rules under the Land Improvement Loans Act:—

		Up to 31st March 1897.	Since 1st April 1897.
		Rs.	Rs.
Shahabad	...	1,950	6,625
Saran	...	9,950	2,178
Champaran	2,155
Muzaffarpur	...	3,100	2,067
Darbhanga	...	1,412	3,900
Total	...	16,414	16,925

Out of the five lakhs sanctioned by the Government of India for ordinary loans under the Land Improvement and Agriculturists' Loans Acts during the current financial year, three lakhs have been allotted to the Patna Division. The greater part of this amount will be given out in loans under the Agriculturists' Loans Act for the purchase of seed and cattle, but the funds provided by Government will not be sufficient to meet requirements. The Commissioner has asked for a further grant of thirteen lakhs. The Collector of Champaran writes that the question of the supply of seed for the autumn crops and winter rice is now of pressing importance, and the Lieutenant Governor has no doubt that there is need of similar help in other districts also. The Executive Committee of the Indian Famine Charitable Relief Fund have allotted Rs. 8,00,000 to the Patna Division, out of which a portion will be devoted to loans or gifts for purchase of seed.

12. *Food-stocks, importation of grain, and prices.*—The following table shows the imports and exports since the second half of November in all districts of the Patna Division, including Patna and Gaya, as far as this Government is aware:—

Half month ending—	Imports.	Exports.
	Mds.	Mds.
28th November 1896	1,55,757	1,93,596
12th December "	1,16,316	2,26,189
26th ditto "	1,76,725	1,48,550
9th January 1897	3,03,426	1,96,409
30th ditto "	4,68,288	1,96,617
13th February "	2,89,425	1,07,564
27th ditto "	2,62,344	76,892
13th March "	2,77,227	83,640
27th do. "	3,47,503	75,003
10th April "	4,20,044	95,701
1st May "	6,57,050	1,58,505
Total	34,74,105	15,56,686

During the five weeks under report the total quantity imported was 10,77,094 maunds, and the quantity exported was 2,52,206 maunds, against 6,24,730 maunds imported and 1,58,643 maunds exported in March. From the middle of November up to 1st May the total net excess of imports over exports is 19,17,439 maunds, or about 70,442 tons. A great part of the imports consists of Burma rice. No deficiency of food-supplies has been reported from any of the affected tracts; but it is apprehended that in the Rhotas Plateau in the district of Shahabad, where there are no grain stocks and population is sparse

and villages are scattered in the jungle, it will be very difficult for petty traders to import grain into the tract, specially during the rains, and the Lieutenant-Governor has authorised the grant of loans to grain-dealers, as in Palamau, up to a limit of Rs. 10,000. Prices have a tendency to rise slowly. In the outlying tracts in the district of Champaran prices are very high, the price of common rice being $7\frac{1}{2}$ to $7\frac{3}{4}$ seers in thana Hardih and $8\frac{1}{4}$ seers in Bagaha, but the people are said to be living commonly on cheaper grains, such as barley and gram.

13. *Cost.*—The figures given in columns 8 and 9 of Famine Statement B have not in all cases been correctly reported by the District Officers. Their attention will be drawn to this with a view to correct figures being furnished in future. The Commissioner states the total cost from the beginning of the operations to the end of April to have been as follows:—

	Rs.
Relief works	19,80,387
Gratuitous relief	7,38,466
Establishment, tools and plant, &c. ...	52,231
Total	27,71,084

This includes Rs. 4,117 on account of the district of Patna. Of the total amount Rs. 17,10,920 were spent in 1896-97, and the remainder, Rs. 10,60,164, has been spent in the current financial year.

14. *Chota Nagpur Division.*—Of the districts in the Chota Nagpur Division, the position remained unchanged in Singhbhum, except that continued exportations had raised the price of rice, especially in the neighbourhood of the railway, where it was selling at less than 8 seers per rupee during the latter end of April. There were no visible signs of acute distress in any part of Lohardaga. The *mahua* has been gathered, and is reported to be a 10 to 12 anna crop all round. There have recently been frequent showers of rain, enabling cultivators to sow rice in many places. Food-stocks are reported to be sufficient, but there is a marked increase of crime, and during the latter half of the month there were several cases of dacoity, a crime almost unknown in this district, and more than one case occurred of granaries being broken into by gangs of villagers. A road was taken in hand as a test-work at a piece-work rate of Re. 1-9 per 1,000 cubic feet; on the 24th April the number of male units at work on it was 996. Arrangements are being made to open other test-works. A kitchen has been opened at Ranchi by the local Relief Committee. Public health and the condition of cattle continued good.

The condition of the district of Palamau, the whole of which continued to be affected, is reported to have become worse. During the first half of the month there was 1.14 inches of rain, but none fell in the second half. The *rabi* has been harvested and the *mahua* flower gathered. The Deputy Commissioner thinks that the yield of neither crop exceeds 6 annas. Prices have risen higher than in any other district. At the date of the report rice was selling at three markets at between 5 and 6 seers for a rupee, and the lowest price recorded is a little over 9 seers per rupee, the average being 7 seers 7 chitaks per rupee. Having regard to the constricted state of the markets, the period for the payment of a bounty of 8 annas per maund of imported rice, which was previously sanctioned up to the 30th April 1897, has been extended for such time as the roads may remain open, subject to the limit of Rs. 25,000 in all. On the recommendation of the Commissioner and the local officers, the Lieutenant-Governor has also taken advantage of the general authority conveyed in the Government of India's letter No. ²⁴⁸⁷₄₅₋₂₈₇ dated the 20th January 1897, to sanction the grant of loans to respectable grain-dealers of Palamau up to an aggregate amount of Rs. 75,000, for the purchase and importation of grain, the loans to be repaid, before the 31st March 1898, with interest at $6\frac{1}{2}$ per cent. per annum. The total quantity of rice imported up to the end of the period under report, on which the bounty of 8 annas per maund has been paid, is 5,046 maunds, and the total amount lent to grain-dealers is Rs. 24,500. The Commissioner has been asked to report whether, in view of the abnormally high prices prevailing in parts of this district, he thinks any further action on the part of Government is required in order to stimulate trade or replenish local stocks.

Notwithstanding the exceptionally high prices, the numbers employed on the Government relief works have decreased. There were altogether 18 relief works open in April against 13 in March, but the total number employed on the 24th April was 2,665, against 3,181, the corresponding number for March. The number rose to 3,119 on the 8th May, as stated in the weekly weather and crop telegram. The Deputy Commissioner considers the comparatively small numbers of Government works to be due to the following causes:—

- (1) The Maharaj Kumar of Chota Nagpur has opened relief works in pargana Tori, and pays wages higher than those given on the Government works; two of the latter have in consequence come to a standstill.
- (2) There was a strike among the relief-workers on roads owing to the reduction of the rate per 1,000 cubic feet from Rs. 2-3 to Rs. 2 for hard soil, Re. 1-11 for medium soil, and Re. 1-5 for soft soil. The *mahua* crop enabled the relief-workers to hold off for a time, and it is stated by the Deputy Commissioner that they are now coming back.
- (3) A number of persons found employment in gathering the *Bysakh* (April—May) lac crop.

A considerable portion of the distressed population have found employment on private relief works. The Deputy Commissioner reports that 3,593 persons were being relieved on 26 of these works, and that eight other works existed for which he had not received returns. The total number on gratuitous relief was small, being 1,672 against 1,524 at the end of March. Public health continued to be good. There was some foot-and-mouth disease among cattle. Advances for village works under the modified rules sanctioned by the Government of India appear to have been more freely taken in this than in many other districts. The total amount advanced during 1896-97 is reported to be Rs. 11,000, and during the current year Rs. 5,833.

The price of rice in Manbhum ranged from about eight to ten seers. Exports decreased and imports increased during the month. The total imports by rail during the period under report amounted to 20,438 maunds, while the quantity exported was only 1,977 maunds. The total area affected is now reported to be 3,373 square miles with a population of 991,000 persons, comprising the whole of the district except thanas Manbazar and Burrabazar. The seriously affected thanas are Gobindpur, Tundi, Nirsha and Topohanchi. The number of relief works open was 11, on which 3,484 persons were employed on the 24th April, against 3,459, the corresponding figure for March, and the total number on gratuitous relief was 4,861 against 4,118 at the end of the previous month. It is reported that considerable numbers of labourers are employed on village works undertaken with advances given by Government. At the close of the period under report arrangements were being made to open three kitchens on the Grand Trunk Road, and to introduce the system of employing women on cotton-spinning which is in force in Hazaribagh. Cholera broke out in several thanas, but has abated.

There were thunder-storms in Hazaribagh in the beginning of the month, which did further damage to the *mahua* crop. During the latter half of the month, however, the weather was favourable, and the Deputy Commissioner estimates the outturn of this crop at over 9 annas for the whole district. There has been a further rise in prices; that of rice varied from 6 to 10 seers, notwithstanding that 40,784 maunds of food-grains were imported during the period under report. The Deputy Commissioner apprehends a failure in the general food-supply of the district before the next *bhadoi* harvest comes to the market, and thinks that assistance from Government in the shape of advances to stimulate trade will possibly be needed. There were altogether 35 test-works open in this district at a piece-work rate of Re. 1-9 per 1,000 cubic feet; the average daily number employed on them was 1,678 in the last week of the period under report, against 2,618 at the close of March. This falling off is attributed by the local officers to the gathering of the *mahua* flower and to the opening of private works. Nineteen kitchens were open, the total number relieved in them being 1,006. A considerable amount of relief is also given in the form of cotton

spinning and weaving, and as many as 689 persons received cotton in the town of Hazaribagh during the last week of the period under report. Public health and the condition of cattle were generally good.

15. *Presidency Division.*—The marginal table shows the rainfall in the several districts in the Presidency Division. The rain has improved agricultural prospects, but there is in the distressed districts considerable difficulty in procuring seed.

In the 24 Parganas there is no scarcity. The district of Jessore is only slightly affected, and it has not been found necessary to open relief works there, though some gratuitous relief is being given, together with loans under the Agriculturists' Loans Act and gifts from charitable relief funds to the poorer cultivators who are in difficulties for seed-grain.

The three worst districts in this Division are Nadia, Khulna and Murshidabad. During the month under report Mr. Finucane, Revenue Secretary to this Government, paid a visit to the affected tracts in these districts, and found that there was acute distress amongst a great part of the population, and that the local officers were efficiently carrying out the requisite measures of relief. In thanas Assasuni and Kaliganj, the worst tracts in the district of Khulna, he noticed specially that among the relief workers there were many usually well-to-do cultivators, who had been driven by distress to work as labourers. He also found that the supply of good drinking water was failing, and on his recommendation the Lieutenant-Governor has decided that in these three districts the relief measures should, during the financial year 1897-98, be conducted entirely at the expense of Government, the limited resources of the District Boards being mainly devoted to the improvement of the water-supply.

Food-stocks throughout the district of Nadia are reported to be very low, and during the latter half of the month there was a sudden cessation in the importation of rice from Burdwan and Murshidabad, the grain-dealers in those districts refusing to sell rice except to their regular customers. The Collector has caused supplies to be imported from Calcutta, and has arranged with a contractor for weekly consignments to be sent to the tract in question, and has induced two residents of the locality to import rice for sale at their own risk. The price of common rice has risen to 8 seers for a rupee, and although the area and population affected, and the number of relief works (14) remained the same as in March, the numbers on relief increased considerably. The total number in receipt of gratuitous relief, which was 32,763 at the close of the period under report, is very large in comparison with the number (18,051) employed on relief works. Women in this and other districts of Lower Bengal will not work on rods or tanks, and therefore have to be employed in husking rice or spinning thread, and to be entered on the gratuitous relief lists, but allowing for this, the numbers are still very large, and the Collector's attention is being given to the possibility of reducing them. The condition of cattle was good, and as regards public health, the Collector writes that he sees no reason to believe that the famine has so far caused any marked increase in mortality. The total amount advanced for village works in this district during the past financial year was Rs. 17,600, and Rs. 6,850 have been advanced under the same head during the current year. The Collector has also sent Rs. 4,000 from the Charitable Relief Fund to be distributed in advances for seed-grain in the Kalantar tract (comprising thanas Kaliganj, Nakashipara and Tehatta), where considerable difficulty is reported to exist about seed. The Collector writes that without this help the lands of indigent cultivators would remain fallow.

The area and population affected in Khulna remained the same, but distress had become more acute, especially among the high-caste poor. To meet the difficulty which the Collector reports is being experienced in procuring seed-grain, steps were taken to give loans under the Agriculturists' Loans Act and gifts from the Famine Charitable Fund. The price of rice rose from 10 to 9

		Inches.
24-PARGANAS	Badar	1.54
	Harnhat	3.05
	Basthat	3.30
	Diamond Harbour	1.94

	Nadar	1.0
MURSHIDABAD	Kandi	1.08
	Jangipur	1.83

seers per rupee, and the distressed tract continued to depend entirely on importations from elsewhere. There were 31 relief works open against 16 in March; 22 of the former were tanks and the rest roads and embankments. The total number employed on the relief works at the end of the period under report was 3,764 against 2,669 in March, while the number on gratuitous relief was 5,360 against 4,090, the corresponding figure for the previous month, but a large proportion of these twist jute or husk paddy in return for the relief given, and can hardly be said to be on gratuitous relief pure and simple. Having regard to the fact that women are debarred by social custom from working publicly on relief works, Mr. Finucane, after his inspection of the distressed area in Khulna, recommended the introduction of a system of payment by results at such a rate as would leave to the labourers a margin for the support of their dependents at home. The Lieutenant-Governor accepted this recommendation, and sanction was accorded to the introduction of the piece-work system. This system has not been well started before the date of the last district report. Several private works and a large number of works undertaken with loans given by Government were in progress and continued to afford employment to a considerable number of labourers. Cholera continued to rage during the period under report, but was checked to some extent by the heavy rain. Two doctors were at work in the affected tract, and, in addition to this, cholera medicines have been freely distributed at thanas and post-offices. The total amount granted as loans for village works during the current year up to the close of the period under report is stated to be Rs 8,950.

The operations in the district of Murshidabad have now passed beyond the test work stage. The total area reported to be distressed is 167 square miles comprising portions of thanas Burwa, Noada, Gorbazar, Gokarna, Bharatpur, Goas, Jalangi, Hariharpara and Daulatbazar, with a total population of 95,000. The general condition of the affected tract has not undergone any material change except that a considerable portion of the *aus* (autumn paddy) growing here already been sown and that *boro* (spring) paddy, which has been grown on about 8,000 bighas, is nearly ripe and promises a bumper crop. The prices of food-grains have, however risen, the price of rice being 8 to 8½ seers for a rupee, and distress is reported to be increasing. Four relief works and two test works were open, and the total number employed on the 3rd May was 3,517. It is reported that 4,000 persons found employment on tanks undertaken by private individuals. A small number was relieved gratuitously, and steps have been taken to employ artisans and women in weaving, spinning, husking paddy, &c. Large numbers are relieved by doles distributed by Maharani Sarnamayi and other wealthy landholders of the district. Cholera has broken out throughout the district. Rupees 6,473 have been given out as advances for village works, and Rs. 6,76 as loans under the Agriculturists' Loans Act.

16. *Bhagalpur Division.*—Prices continued to rise slowly throughout the Division, but actual distress requiring relief measures on a considerable scale was still confined to the districts of Bhagalpur and the Sonthal Parganas. Burma rice began to be sold during the month in the Sonthal Parganas as well as in other districts of the Division.

During the latter half of the month heavy rain fell throughout the district of Bhagalpur, the recorded fall for the whole period under report being as noted on the margin. The rain was very beneficial to sugarcane and *mung*, and generally brightened the prospects of the next *bhadai* crops, but there has been no immediate improvement. Prices have gone up, the price of com-

Bhagalpur.		Inches.
Sadar	...	1.00
Banka	...	1.93
Madhipura	...	3.04
Supaul	...	1.91

mon rice being 8 seers per rupee in Madhipura and 8½ seers in Supaul, and the poorer classes are reported to be coming to the end of their slender stocks, with the result that the number of persons requiring relief is increasing. The more seriously affected parts of the district continued to be the Bongong thana of the Madhipura subdivision and about 300 square miles in the Supaul subdivision. A test work has been opened in the Colgong thana of the Sadar subdivision, but has not yet attracted any considerable numbers. In the Katuria thana of the Banka subdivision there has been no material change, but it is believed that relief works will be necessary in this tract during the current month. The

outturn of the *mahua* crop in this subdivision is estimated at ten annas. Up to the date of the report the only form of relief found necessary here was gratuitous relief to beggars and to the very poor out of the Charitable Relief Fund. There were eleven relief works open in North Bhagalpur against nine in the latter half of March, and the number of relief-workers at the close of the period under report was 18,965 against 9,819, the corresponding figure for that month. There were also several private works open, but precise information regarding them has not been furnished. There was practically no increase in the numbers on Government gratuitous relief, the number at the end of the period being 3,413 against 3,394 in March, but relief from the funds of the Indian Famine Charitable Relief Fund was being given over large areas throughout the district, and gratuitous relief was also being regularly given by certain zamindars in North Bhagalpur. The public health was satisfactory, and the condition of cattle good.

The area of actual distress in the Sonthal Parganas was, as before, 367 square miles in the Jamtara subdivision. The outturn of the *mahua*, which is an important food crop throughout the district, is reported to have been better than was anticipated, and is now estimated at 10 annas. There was about an inch and a half of rain, which has benefited the sugarcane and has improved the pasturage and water-supply for cattle. Five relief works were open against four in the latter half of March, and the number employed was 2,064 against 2,313 at the close of that month; but several tanks were under construction by private individuals, which gave employment to a large number of labourers. The number in receipt of gratuitous relief increased from 235 at the end of March to 1,046 at the close of the period under report. Public health was generally good. Advances for village works given during the period under report amounted to Rs. 1,250.

As regards other parts of the district, the rain has improved future prospects, but the condition of the Deoghur subdivision is reported to have become slightly worse in consequence of the rise in prices. Arrangements have been made to open test-works wherever they may be required.

17. *Rajshahi Division*.—The only districts in the Rajshahi Division with regard to which anxiety is felt are Rajshahi and Pabna. Two test-works were open in each district, besides several tanks undertaken by private individuals. At the close of the first half of the month the total numbers on the Government works, as given in the weekly weather and crop reports, were 1,163 in Rajshahi and 654 in Pabna. Copious rain has since fallen, which has been very beneficial to the *boro* or spring rice, and has drawn off labourers for field operations for the next *bhadoi* and *aman* crops, the prospects of which have been improved by the rainfall. The telegraphic report for the week ending 3rd May shows that the numbers on the test works were 781 in Rajshahi and 192 in Pabna. Prices are, however, very high. The Collector of Rajshahi writes that the price of rice at several markets varied from $7\frac{1}{2}$ to 8 seers per rupee, while in Pabna it went up to 7 seers, but after the rain in the second half of the month came down to $8\frac{1}{2}$ seers per rupee. It is apprehended that some distress will continue to exist until the next *bhadoi* harvest comes to the market. Public health and the condition of cattle were generally good.

18. *Orissa Division*.—Of the districts in the Orissa Division, there is at present no sign of distress in Angul and Balasore. In the district of Cuttack an area of 1,477 square miles with a population of 649,000 is under observation. But as yet no general distress has appeared in any part of this area. At present there is only one small relief circle of 33 square miles consisting of pargana Kuhunda-Jaipur in the Sadar subdivision and portions of two parganas in the Jajpur subdivision. No relief or test-work has been opened, but arrangements have been made to give gratuitous relief out of the Charitable Relief Fund. Labourers find employment on private works and ordinary works undertaken by the District Board and on the railway, which is reported to have been of immense service. The recent falls of rain have been of great benefit here as elsewhere, and the Commissioner sees no occasion to take a gloomy view of the condition of this district at present. The stocks of food-grains in the tract above mentioned are, however, reported to be small, and the local officers apprehend that when the rains set in and the rivers rise steps will have to be taken to

stimulate the importation of grain into the tract, because the people will not have the means to obtain their own supplies from a distance. Public health was fair and the condition of cattle good.

The affected area on the Chilka Lake in the district of Puri is now reported to be 231 square miles with a population of 74,000, of which 8 per cent., or 5,920, may, in the opinion of the local officers, be said to be actually distressed. An additional area of 76 square miles, with a population of 26,000, is reported to be affected in the Khurda subdivision, but this Government is not now in possession of full particulars regarding this tract. In the Chilka Lake tract the supplies of food were found to be failing. The Lieutenant-Governor, at the instance of the local officers, has authorised the grant of advances to grain-dealers, as in Palamau. It is reported that the measure has been so far successful that there is now no want of food-grains in the tract. The total rainfall during the period under report was 3.22 inches in the Sadar subdivision and 3.25 inches in Khurda. There were fifteen relief works and five test works open, and the total number employed on them on the 24th April was 2,874, as given in the weekly telegraphic report, against 4,204 at the close of March. Besides these there was a road under construction by the District Board, which employed an average of about 850 persons daily during the latter half of April, and about 1,500 men found employment in two salt factories. The number on gratuitous relief on the 24th April was 193 against 75 in March. Public health and the condition of cattle continued to be generally satisfactory.

19. There is nothing of importance to report with regard to the Burdwan, Dacca and Chittagong Divisions.

20. Since the close of the period under report, a Resolution No. 181 ^{T. R.}_{Res.}, dated the 6th May, has been issued, sanctioning the introduction of the system of piece-work or payment by results, in the Divisions and local areas noted on the margin.

The figures for the districts of the Patna Division relate to the five weeks ending 1st May 1897.
Columns 8-5—Champaran.—The figures include 73 miles of the proposed railway from Bairaigia to Bagaha, which would give employment to about 14,120 persons for three months.

No. 1158F.G., dated Bankipore, the 11th May 1897.

From—J. A. BOURDILLON, Esq., Offg. Commissioner of the Patna Division,
To—The Secretary to the Government of Bengal, Revenue Department.

I HAVE the honour to submit herewith my famine report under sections 13 and 24 of the Famine Code for the second-half of April. The figures in the statements refer to the three weeks ending 17th and 24th April and the 1st May. I regret that the report is so late, but the figures to be collected were those for three weeks instead of a fortnight involving much extra labour both in the local offices and in mine. The report for the Darbhanga district, in which both the numbers relieved and the number of works open are larger than anywhere else, was not received in my office till midday on the 12th owing to the misbehaviour of the messenger.

PART I.—INTRODUCTION.

2. Since the date of my last report I have made two short tours in the Division.

3. On the evening of the 21st April I met at Bankipore the Hon'ble Mr. James, Vice-President of the Executive Committee of the Indian Famine Charitable Relief Fund, and accompanied him to Motihari. After spending the 22nd at Motihari, we travelled by night to Muzaffarpur, and after passing the forenoon of the 23rd there proceeded to Darbhanga, arriving in the evening. On the afternoon of the 24th Mr. James went on to Calcutta, and I returned to Bankipore. During this tour we discussed at great length with the three Collectors the condition of their districts and the proposals for the expenditure of the funds allotted by the Provincial Committee. We also interviewed at each place the members of the District and Sadar Local Committee, and discussed their plans with them. Mr. James was also shown the poor-houses, as well as our systems of task work and of gratuitous relief.

4. My next tour was in the Saran district. On the 29th April I went up to Chapra by the morning train, and spent that day and the next at Chapra, as it was essential that I should discuss with Messrs. Earle and Chapman together not only famine affairs, but also important matters connected with the Hutwa Estate and others. I inspected the Chapra poor-house, which is the best that I have yet seen for completeness and good management. Mr. Chapman, who has had charge of this work, deserves credit for it. On the evening of the 30th I proceeded with Mr. Knyvett, District Superintendent of Police, to Siwan where I spent the night, and saw Messrs. Tytler and Lyall. On the morning of the 1st May I drove to Hutwa, where there were many matters to be discussed with the manager and his assistants; here I was met by Messrs. Gauntlett and Garrett. In the evening, after an interview with the Maharani, I drove to Gopalganj with Mr. Chapman, Officiating Collector, who had joined me at Hutwa in the afternoon. On the 2nd May I drove with Messrs. Chapman and Lister (Subdivisional Officer of Gopalganj) to Jhajwa (18 miles), where we met Mr. Lang (Charge Superintendent), Mr. Pridham (R.E.), Assistant Engineer, and Messrs. Vipin and Berrill, local planters. As it was Sunday, there were no workers visible; but we examined two large works on the way. In the afternoon we drove on to Bansghat Factory (7 miles), where we found Messrs. Toogood and Maconchy. On the 3rd May Mr. Chapman and I drove to Rajaputty Factory (7 miles), where I had some conversation with Mr. Mackenzie, the Manager, and then rode about 7 miles (there and back) to the Jagdispur tank, where we were met by Messrs. Toogood and Maconchy again. The people on this tank, which is under Public Works Department agency, were on strike, because the task had been raised under my orders: they were in excellent condition, and fully capable of doing the task. We next drove to Bahrowlie Factory, (8 miles) where we were entertained by Mr. Filgate, the Manager, who has been of great assistance to the Collector in many ways. From Bahrowlie we drove through Mashrak to Chapra, 26 miles—arriving at dark. On the 4th May I returned to Bankipore.

5. My observations on this tour fully supported Mr. Earle's differentiation of the distressed portions of his district. East Gopalganj and the north-eastern corner of the Sadar subdivision are certainly the worst parts of the district that I have yet seen, and undoubtedly require help, but I doubt

whether the distress is so acute as Mr. Earle thinks, and the attitude of the people towards relief works shows that they still have some resources: here, as elsewhere, there is a small percentage who are in very acute distress from high prices and the failure of crops. The prospects of the crops in the country all along the road from Mashrak to Chapra were very good, but this is admittedly one of the best parts of the district.

PART II.—DISTRICT REPORTS.

6. *Patna*.—The brief statement that “all’s well” is almost sufficient for a report of this district during the past three weeks. Crop prospects are excellent. Prices are fairly steady with a slight tendency to rise, especially in the case of common rice. Cultivators are said to be holding on to their *rahi* everywhere.

7. Food-grain traffic is as brisk as ever. The imports during the three weeks under review aggregated 1,16,890 maunds, while the exports were 70,114 maunds, leaving a balance of 46,776 maunds in favour of the district. At the end of the previous fortnight the balance in favour of imports was only 17,231 maunds. Out of these imports, 85,141 maunds were rice, and 12,440 maunds wheat, the latter mostly from the westward.

8. The Collector has been trying to carry out his ordinary repairs to District Board roads this year by a system of direct payments, but finds that the labourers are well enough off to be able to refuse $2\frac{1}{2}$ and even 3 annas a day. Nothing could be more eloquent of the good condition of the people in this district.

9. The Bankipore poor-house contained on an average 111 persons a day during the last three weeks.

10. *Gaya*.—There is no change in the prosperous condition of this district. The *china* crop, which ripens here earlier than to the north of the Ganges, is nearly harvested, and this will add to the already ample food stocks in hand. The *makua*, which is an important crop in this district, especially in the south, has been better than it was last year.

11. Prices show a tendency to harden, but the difference is very slight. Burma rice is selling everywhere a little cheaper than country rice.

12. Imports for the three weeks were 22,691 maunds against 11,244 maunds, and exports 977 maunds as against 1,177 maunds, so that for this longer period the balance in favour of the district was 21,911 maunds as against 10,067 maunds in the preceding fortnight. It is probable that much of the imports which were chiefly rice (17,630 maunds) were intended for re-exportation to Palamau, as 2,232 maunds of that grain went southward.

13. A considerable number of persons were fed at the kitchens along the Grand Trunk Road, the average daily numbers being as follows: Barachatti 36, Kusa 98, Madanpur 86, Aurangabad 133. A relief kitchen at Nawada had an average daily attendance of 88, and that at Badhaul, kept by a local Mahant, gave cooked food to 66 and grain doles to 82 persons a day on the average.

14. *Shahabad*.—From this district also the reports show that matters are progressing satisfactorily, although the Collector has had to extend his affected area by including the Rohta’s plateau and the Akbarpur tract along the Sone. The total area affected has been carefully recalculated, and including the two tracts just named, it amounts to 1,632 square miles with a population of 381,296 persons.

15. The public health in the district is good, although in the Bhabhua subdivision the death-rate for March was somewhat higher than usual; but Mr. Windsor in his 12th and 13th paragraphs has shown that this was almost entirely due to small-pox, which also caused many deaths in February.

16. Prices remain practically stationary; and this fact, coupled with the large exports to be noticed below, seems to show that stocks are plentiful in the district as a whole. At Bhabhua while rice and peas remain the same, wheat is half-a-seer cheaper and *rahar* a seer dearer than it was three weeks ago.

17. There has been a further development of exports in the period under report. Imports by rail were 26,368 maunds against 28,777 maunds, and exports 26,998 maunds against 28,407 maunds, so that the result was a net loss to the district of 30,630 maunds instead of a small gain of 370 maunds. The imports

consisted mostly of rice, and the exports were *rabicereals* and pulses. The arrangements for getting information from Zamania and the river side ghats are now completed.

18. The following statement, as usual, gives the figures for relief works and gratuitous relief:—

SHAHABAD.

Week ending.	Number of works open.	AVERAGE DAILY NUMBER OF MALE UNITS ON—				Average daily outturn per male unit.	Cost per 1,000 cubic feet.
		Task work.	Daily wage, irrespective of task.	Gratuitous relief, including dependants.	Total.		
1	2	3	4	5	6	7	8
3rd April 1897	7	7,196	616	16,311	24,023	C. ft. 39	Rs. A. P. 2 13 2
10th " " "	7	6,418	619	17,899	24,936	35	2 14 1
17th " " "	7	7,297	909	18,390	26,596	36	2 12 1
24th " " "	7	5,174	855	19,319	25,348	39	2 7 2
1st May " "	7	4,196	668	18,596	23,460	39	2 3 7

The number of works open remained the same, for though two have been closed, the Hata-Bhabhua road because it was finished, and the Hata-Durgaoti road because it was near the Railway works, two others have been opened, viz., the Bhabhua-Rajghat and Bhabhua-Jahanabad roads. A tank is also being excavated at the expense of the Sabar Ward.

19. The daily average number on task work shows a steady diminution, due partly to the reduction of the wage caused by an alteration of the grain basis from rice at $8\frac{1}{2}$ seers to a mixture of peas and rice at $9\frac{1}{2}$ seers. It is also partly due to the closing of the two roads mentioned above, which has not yet been followed by a corresponding increase in the numbers on the two new roads, and the railway: there is also some private work which attracts labour. The increased railway rate of Rs. 2-8 per 1,000 cubic feet is beginning to attract rather larger numbers, the daily average of persons on the railway in the three weeks under review having been 6,702, 9,236 and 10,231.

20. The numbers on daily wage irrespective of task show some increase as compared with the figures for previous periods, and are now 14.61 per cent. of those on task work, whereas in the previous fortnight they were only 8.63. The reason is that under recent orders those who receive the Sunday wage are entered in this category, and not among the task workers.

21. The outturn of work and cost rate remain good, considering the hardness of the soil. The Collector has just made a tour in Bhabhua, visiting all the relief works, and he was on the whole satisfied with what he saw. The individual digger system is in force in this district, and as it is working well and can be maintained, because the numbers are small, I have decided not to interfere with it, or to insist on the pit-gang system being introduced. The results are good enough to justify non-interference.

22. Gratuitous relief is still very large in this district. Since the date of my last report I have been in correspondence with the Collector on the subject, and he urges strongly that the peculiar circumstances of the district, which have more than once been detailed before, justify the high figures. However a remark in the report now under review shows that the classification of labour in this district is not the same as that adopted elsewhere. Mr. Windsor says that all his labourers are B class, and that none of them are so weakly as to require to be set a special task. As it is certain that many such weakly persons must be in existence, and as the numbers on daily wage are too small to allow of their all being included in that category, the inference is irresistible that many of those who are now in the receipt of gratuitous relief ought to be working as D class labourers. On the other hand, the Collector reports that he has carefully checked the gratuitous relief lists, and finds that they are satisfactory. The point will be further discussed with Mr. Windsor.

23. The poor-houses, along the Grand Trunk Road and elsewhere, continued to relieve a number of persons, the daily average for each of the three weeks having been 581, 610 and 701.

24. *Saran*.—The feature of the last three weeks in this district is a steady rise in the numbers on relief works and in those receiving gratuitous relief: in other respects there is not much to notice.

25. Rain fell here, as elsewhere, on the 21st and 28th. Much benefit to the pasture has occurred from these flying storms, as well as to the *china* and sugarcane.

26. Crop prospects are excellent. As already stated, I have during the past week made a short tour in Saran, and I was gratified, though not surprised, to find with what readiness and resource the raiyats have almost everywhere adapted themselves to the season. *Chours* and swamps usually abandoned to the village pig, the buffalo, and the cattle egret, are this year green with early rice and *janera*; almost every piece of land which it is possible to irrigate has a crop of *china*, which may be seen in every stage of growth, and vast stretches of land lie waiting for the *bhadai* or the rice crop, all ready ploughed or dug up with the hoe. Mr. Tytler, Sub-Deputy Opium Agent of Siwan, estimates that 50,000 bighas in the north and west of the district have this year been sown with *china*, and it would probably not be too much to say that the district contains 100,000 acres of this useful grain, which, if well watered, yields 15 or 20 maunds an acre.

27. Having regard to these prospects and to the effect which the *rabi* crop has had on the condition of different parts of the district, the Collector has revised his areas of distress, and has reduced the area to 1,512 square miles with a population of 1,416,176 persons. He has submitted his monthly map coloured accordingly.

28. Prices show very little variation, and are if anything easier at Gopalganj than elsewhere.

29. Taking the statistics for rail, road and river together so far as they can be ascertained, the imports during the three weeks amounted to 162,652 maunds against 94,256 maunds in the previous fortnight, and the exports were 18,115 maunds against 9,761. The result is the large balance in favour of the district of 144,547 maunds, against 84,495 in the previous fortnight. Most of these imports were rice from Calcutta and the Burdwan Division, but there is a considerable importation of "other food-grains" from the neighbouring districts of the North-Western Provinces. The total rice imported aggregated 89,820 maunds, and wheat reached 20,163 maunds.

30. The accompanying statement gives the usual particulars as regards relief works and gratuitous relief:—

SARAN.

Week ending—	Number of works open.	AVERAGE DAILY NUMBER OF MALE UNITS ON—				Average daily outturn per male unit.	Cost per 1,000 cubic feet.

Six new works have been opened, and out of the total, 33 are under civil and 6 under Public Works Department agency.

31. Turning first to relief works, it will be seen that there has been a steady advance during each of the last three weeks in the numbers on works equivalent to 76·54 per cent. in all during that period, the increase being 70 per cent. in the case of task workers and 107·9 in that of those paid by daily wage irrespective of task. As the figures in Form 5 are still submitted in the old form, it is difficult to say where this increase has occurred, nor has the Collector said anything on this point.

32. The daily outturn of work is fair and the cost rate low. This is partly because the Collector takes, as his basis for the grain equivalent, barley at from 12 to 14 seers the rupee. The Public Works Department figures of outturn are better than those for Civil Agency works (see Form 7): first, because many of the Civil Agency works are tanks; and, secondly, because the chief Public Works Department work in the district is in extraordinarily light and easy land.

33. The pit system is now being introduced. Mr. Earle, the late Collector, hesitated to introduce it, partly because he had no forms and partly because he found that with his small numbers he could manage to measure up and pay for the work of each digger and his carriers, which is after all the ideally fair system. I found that there was much leniency in regard to classification of soils, but I am now glad to learn that my orders for the exaction of a task of 200 cubic feet are being introduced: it can be done with ease almost everywhere.

34. The numbers on gratuitous relief are again very large, and Mr. Chapman, who has just taken charge, is disposed to think that it has been somewhat overdone in some parts of the district. I have little doubt of the fact, and hope that by close scrutiny he will be able to keep the numbers down. It is significant that there are very few D class labourers, and (a fact which was brought to my notice when I was in the district) the number of children who are relieved as dependants is extremely large, especially on works under Public Works Department agency, where there were 31 children dependants gratuitously relieved to every 100 task workers of all sorts. I have instructed the local officers that they must scrutinise more carefully the claims of children to be classed as dependants, and I also ordered that, if the numbers still continued large, kitchens were to be opened for the children at all large works, and that they should be fed on the spot instead of receiving pice to take to their parents. I trust that these two changes in practice will have the desired effect. During the last week of the period the average daily number of adult units in receipt of gratuitous relief amounted to 70·14 per cent. of all the adult units relieved in every way.

35. The relief works under the Hutwa Raj again give results much below those on works under Government officials: the outturn per male unit was not much more than half that obtained on Government works, and the cost rate therefore is nearly twice as high. The Collector has called on the Manager to explain, and I trust that he will be able to improve the administration; it is true that many of the Raj works are tanks, but even if this point be conceded, there is no doubt that there is still room for more strictness and closer supervision.

36. The numbers in the poor-houses have begun to rise again, as the *rabi* harvest is over: in the four Hutwa institutions, the daily average was 409 against 231 in the previous period, and in the Government poor-houses it was 106 against 85.

37. The appended statement giving payment of money-orders month by month shows that the total receipts in April 1897 were only about half what they were in April 1896: the meaning obviously is that the emigrants are returning earlier than usual, for in 1896 the large drop occurred in May 1896: as times are hard and prices high all over the Province, it may well be that such large savings are not being brought back as usual; but, as I have already reported in a separate letter, more than 16 lakhs of rupees have been remitted to this district by small money orders between the 1st October 1896 and the 31st March 1897.

38. *Champaran*.—In this district the two principal features of the last three weeks' administration have been a steady decrease in the numbers on task work, and a somewhat disquieting rise in the prices of food-grain.

39. Public health continues good, and for April was relatively better than in March, the death-rate of the district being only 2·15 per mille, against an average for the past five years of 2·34. In Motihari, Madhubani and Adapur thanas the rate is slightly above the average; elsewhere it is below it, as details are not yet available. They will be discussed in Mr. Macpherson's next report.

40. Rain fell on the 20th April in scattered showers, very variable in quantity, Motihari receiving an inch and a third, and Bagaha little more than a quarter of an inch. The effect was everywhere beneficial except to the indigo in a few places.

41. To show the range of prices, the Collector has given as usual the prices of the common grains at Motihari and Bettiah for the last day of the past four weeks, and has supplemented the information by the remarks in paragraph 12 of his report. At Motihari common rice and barley are a quarter of a seer dearer than they were four weeks ago, and *rahar* is 7 chitaks dearer: on the other hand, wheat is 1½ seers cheaper, and gram 7 chitaks cheaper than before: maize is stationary. At Bettiah all grain is cheaper than at Motihari, but a glance at the average for five years shows that this is practically a constant incident: at this mart common rice and maize are unaltered in price, but there is a rise of a seer in barley, and a quarter of a seer in wheat. On the other hand, grain is a seer cheaper, and *rahar* is cheaper by a seer and a-half. In the bazars of Hardih thana common rice is sold between 7½ and 7¾ seers, and in Bagaha it has risen from 9 to 8¾ seers; it is impossible that, at these rates, rice can be the common food of the people, and it is more likely that they are living on barley and gram. The Collector's latest weekly telegram states that the famine wage is based on maize at 9¾ seers.

42. Mr. Macpherson further states (paragraph 7) that the question of seed grain is now of pressing importance, and he will be asked at once to submit a special report on the subject. He has funds at his disposal for advances under the Agriculturists' Loans Act, and these can be freely used at once.

43. For the first time for many weeks there appears to be some check in the amount of grain imported by rail. The figures for the three weeks are 42,216 maunds imported and 671 maunds exported, against 71,854 imports and 246 maunds exports for the previous fortnight. The net result of the period is a balance in favour of the district of 41,545 maunds against 71,608 maunds for the fortnight previous. The imports to Bettiah also fell off considerably for some reason not explained. Most of the imports were rice and paddy as usual, viz., rice 28,014 maunds and paddy 12,719 maunds, of which almost all came from Howrah, viz., 26,657 maunds and 12,169 maunds respectively.

44. The following table gives as usual comparative statistics of relief works and gratuitous relief:—

CHAMPARAN.

Week ending—	Number of works open.	AVERAGE DAILY NUMBER OF MALE UNITS ON—				Average daily outturn per male unit.	Cost per 1,000 cubic feet.
		Task work.	Daily wages, irrespective of task.	Gratuitous relief, including dependants.	Total.		
1	2	3	4	5	6	7	8
3rd April 1897	...	60,626	7,134	49,745	117,605	C. ft. 24 5	Rs. A. P. 3 14 11
10th " " "	70	65,494	7,170	48,696	111,360	25 5	3 12 11
17th " " "	70	62,143	10,850	49,578	112,371	30	3 4 6
24th " " "	73	50,697	13,913	52,658	117,268	30	3 3 0
1st May " "	81	43,891	12,271	54,057	110,219	33	2 18 4

The number of works has been increased again by the opening of three new Civil Agency works, and eight under Public Works Department Agency. The former now number 54 and the latter 27: of the eight new works under the Public Works Department, five are sections of the two big canals at Tribeni and Dbaka.

45. There has been a steady reduction in the number of task-workers (as a reference to my previous reports will show) since the week ending the 13th March, when the daily average was 92,654. Mr. Macpherson explains that it is partly spurious, since during the last three weeks those who receive the Sunday wage have for the first time been placed under those who receive the daily wage irrespective of task: it is also partly due to "the changes consequent on the closing of a number of works in North Bettiah, in order to transfer as much labour as possible on to the Tribeni canal." These explanations affect the last few weeks, while for the earlier weeks of the period, it was said that the *rabi* harvest attracted a good deal of labour. All these causes, however, seem to me hardly to account for the quantity and persistence of the decrease, and the Collector will be specially addressed on the subject.

46. The outturn of work is improving, and is better on Public Works Department works than on those under Civil Agency, as the latter include an immense proportion of tanks. In a circular now under issue, I am directing all officers in whose district the piece-work system has been sanctioned to show the results separately from those for task-work, and in a separate letter to Government, I have asked permission to amend Form 7 for this purpose.

47. The decrease in cost rate is partly due to the elimination from the calculation of the payments made on Sunday, but this should not have been done: it is fair enough in calculating the outturn to divide only by the numbers of those who actually helped to produce it, but in calculating the cost of work, the whole of the attendants, special gangs and others should be included, since without them the work could not go on. The numbers on daily wage, irrespective of task, have risen for the reasons given in paragraph 45 above.

48. Mr. Macpherson's verdict is strongly in favour of the pit-gang system for reasons stated in his 22nd paragraph. In this district the piece-work system has been sanctioned in five large works, and was introduced on the Tribeni canal effectually only during the last week of the period under report. The rate of Rs. 1-14 per 1,000 cubic feet, first offered was found by actual experience to give less than could be earned on task works, and had not Government sanctioned as a special case a rate of Rs. 2-8, the experiment would have broken down: it will be most carefully watched.

49. The numbers on gratuitous relief are still going up slowly, and the Collector points out that during the three weeks just past the daily average of persons (not adult units) relieved, has gone from 60,870 to 64,484, which last figure is the equivalent of 4.3 per cent. of the population of the distressed area. This proportion is rather above the 3 per cent. which has been taken as a fair standard, but the Collector is alive to the fact that incessant checking is necessary, and with the additional officers now at his disposal, or shortly to be so, this closer supervision will be possible. Some of the recipients also will go off our lists on to those of the Charitable Relief Committees. A reference to Form 6 will show that in this district the number of dependants relieved on the relief works is well kept down. The percentage in the last week under report is 7.9 to all the persons gratuitously relieved.

50. In the six Government poor-houses in the district, a daily average of 585 persons was fed throughout the period under report. The high rate of the dole, 1 anna 8 pies is explained to be due to the miserable condition of the inmates of these institutions, who are mostly sick beggars and waifs, who have been discovered and brought in, and require to be fed up with special diet and comforts.

51. The number of kitchens open was 11 with a daily average of 607 persons: it is clear that these institutions are not needed for the special purpose which makes them so valuable in Muzaffarpur.

52. Three of the Collectors' Charge Superintendents have been ill during the period under report.

53. *Muzaffarpur*.—As has been anticipated for some time, the three weeks under review have been marked by a steady increase in the number of those on relief works and in the receipt of gratuitous relief, but the increase though considerable, has not been so great as was expected.

54. The health of the district remains remarkably good, and the rain which fell about the 20th and 28th of April, greatly benefited the growing crops, *china*, *moong* and sugarcane, and secured the pasturage at any rate for the present.

55. Prices are fairly stationary. That of rice has risen everywhere, but as regards other grains the Muzaffarpur market is steady. At the two sub-divisional head-quarters some grains rose in price and others fell; wheat falling at both, and gram, which has not been a very good crop this year, rising at either place. There is no apprehension as to the sufficiency of food stocks.

56. Imports have apparently developed largely, but taking into consideration the longer period under report, the result is about the same as in the previous fortnight. Imports were 94,887 maunds against 62,386 and exports 4,656 against 1,647—the balance in favour of the district as the outcome of three weeks' traffic was 90,231 maunds against a net importation of 60,739 maunds in the previous fortnight. Of this quantity the greater portion (52,280 maunds) was rice, while 28,597 maunds of "other food-grains" were imported. Next to Muzaffarpur which imported 48,201 maunds, comes Sitamarhi with 12,427 maunds, two-thirds of which were rice.

57. The usual comparative statement of relief of all kinds is given below:—

MUZAFFARPUR.

Week ending	Number of works open.	AVERAGE DAILY NUMBER OF MALE UNITS ON—				Average daily outturn per male unit.	Cost per 1,000 cubic feet.
		Task work.	Daily wage irrespective of task.	Gratuitous relief, including dependants.	Total.		
1	2	3	4	5	6	7	8
3rd April 1897	...	25,242	3,619	32,206	62,127	60.59	Rs. 1 12 7
10th " "	78	27,888	6,912	39,339	74,139	64.73	1 10 6
17th " "	...	28,778	8,924	41,131	81,843	51.44	1 13 1
24th " "	...	33,160	10,783	49,823	94,366	57.	1 10 0
1st May "	94	37,108	12,349	55,888	1,05,345	62.08	1 7 6

There has been a considerable increase in the number of works open, and in this respect Muzaffarpur now stands second to Darbhanga only: of the 94 works open, 74 were under Civil Agency and 20 under that of the Public Works Department.

58. It will be seen that for the last five weeks there has been a steady rise in the numbers on relief works and in the receipt of gratuitous relief. The Collector has not stated whether this rise was general, but I have had the

Date.	SUBDIVISION.		
	Sadar.	Hajipur.	Sitamarhi.
1	2	3	4
1897.			
17th April	55,903	42,107	128,441
24th " "	62,723	57,486	147,050
1st May	76,726	61,160	188,909

figures totalled, and I find that for the last three weeks the grand total of male units on relief works in each subdivision has been as in the margin. The figures denote a steady increase of pressure from high prices all over the district. That the rush has not been greater is probably due to the causes detailed in Mr. Hare's 4th paragraph: he has certainly succeeded in exacting a very high average outturn,

and it is also true that the people are as a rule in good condition: for these results he undoubtedly deserves every credit, especially as they have been obtained at the expense of more anxiety than most officers would care to undergo. It is too early yet to say more on the subject. Except in the middle week of the period the outturn under Civil Agency was superior to that obtained on works under Public Works Department Agency.

59. On the Darbhanga Raj relief works in the Parihar Circle, a daily average number of 2,128 persons was employed.

60. Under gratuitous relief there has also been an advance to almost exactly the same extent—for whereas in the three weeks under review there has been an advance of 41.54 per cent. in the average daily number of male units on relief works, the increase in the average number of adult units daily receiving gratuitous relief has been from 39,339 to 55,888, or 42.04 per cent.

I do not suppose that these figures will rise much higher, for the proper objects of charitable relief should by this time all have been entered on the Circle Officers' lists, while the number of new candidates should be more than counter-balanced by those who are transferred to the agents of the Charitable Relief Fund. The ratio of those in receipt of gratuitous relief to those in receipt of all relief was 53·04 during the last week of the period.

61. The six Government poor-houses in each of the three weeks contained a daily average of 232,218 and 223 inmates. In the Darbhanga Raj poor-house at Parihar an average of 254 persons was fed daily.

62. The kitchens for children which form an important feature of relief in this district have again done excellent work: they were 26 in number, and in the three weeks under review there were fed on an average every day 2,587, 4,044 and 4,865 persons; of these 73·64 per cent. were children, and they averaged respectively 1,929, 3,027, and 3,510 per diem in each week. The fact stated by Mr. Haro, that particularly in the Sitamarhi subdivision the people have begun deliberately to starve their children, especially the girls, rather than suffer themselves, is eloquent of the height which the pinch of hunger has reached. The same fact has been reported from Darbhanga and the worst parts of Champaran also. The attention of other District Officers will be drawn to the matter.

63. *Darbhangā*.—In this district steady progress is being made, and I am glad to be able to report that numbers are not rising. The expected rush has not yet begun.

64. Prices still remain stationary. Common rice is dearer at all the sub-divisional head-quarters, and *marua* and *rahar* are dearer at Darbhanga, while gram is cheaper. At Samastipur *rahar* is cheaper: at Madhubani there is a fall in the price of wheat, barley, *marua* and *rahar*: all grains not mentioned above have undergone no change in price. Food stocks in the bazars seem to be sufficient everywhere, except perhaps in parts of Bahera thana, where, according to the Collector, the grain is in the hands, not of bunniahs so much as zamindars, who are holding back for higher prices. The Local Committee of the Charitable Fund applied for leave to spend Rs. 5,000 in importing and selling grain to break this ring, but I have refused to sanction the proposal. If the difficulty continues, and the holders will not listen to reason, the Collector may have to appoint contractors under section 36 of the Famine Code, and to plant bunniahs on his relief works with the privileges allowed in paragraph 20 of Government Resolution No. 420M.P.I.

65. Imports of food-grain by rail show a satisfactory increase. The total imports for the three weeks aggregated 1,86,346 maunds, and the exports were 4,974 maunds, giving a net excess of imports of 1,81,372 maunds, or an average net import of 60,457 maunds a week: in the previous fortnight the average weekly net import was 40,967; the imports having been 85,063 maunds against 3,128, and the balance in favour of the district 81,935 maunds. Out of the total imports, i.e., 1,86,346 maunds, as much as 63,249 was rice, and 79,581 other food-grains.

66. The statistics for relief works and gratuitous relief are compared as usual in the following statement:—

DARBHANGA.

Week ending	Number of works open.	AVERAGE DAILY NUMBER OF MALE UNITS ON—				Average daily outturn per male unit.	Cost per 1,000 cubic feet.
		Task work.	Daily wage, irrespective of task.	Gratuitous relief, including dependents.	Total.		
1	2	3	4	5	6	7	8
3rd April 1897	62,636	6,584	50,726	125,926	33	Rs. 2 11 6
10th " "	134	74,523	9,711	56,645	140,919	33	2 12 5
17th " "	62,689	12,580	56,140	131,314	33·8	2 7 2
24th " "	80,161	26,968	61,702	168,821	41·5	2 6 3
1st May "	152	78,836	24,387	64,069	167,240	38·08	2 7 6

There has been an advance in the number of works which now number 152 divided as follows:—Civil Agency, 108; Public Works Department Agency, 44.

67. As regards male units on relief works, the total daily average numbers for the last five weeks are as follow, including both task workers and those on daily wage irrespective of task: 75,200, 84,234, 75,174, 107,119 and 103,172. The oscillations in the total are remarkable and are apparently due to the *rabi* harvest. The increase in the number of persons on daily wage, which is noticeable in the last three weeks, is due partly to larger numbers being employed in dressing gangs, partly to the effect of my orders that all those receiving the Sunday wage should be shown as receiving daily wage irrespective of task. The outturn is rising, and the cost rate falling. Form 7 shows that the outturn of work is still better on Civil Agency works than on those under the Public Works Department.

68. The figures below show what fluctuations have occurred in each subdivision. It will be seen that in the last week of the period under report, the falling off is accounted for in the Madhubani subdivision and on Civil Agency works in the Sadar subdivision where Public Works Department works have gained what the Civil Agency works have lost, clearly implying a taking over of works. In the previous week all the advance was in the Sadar subdivision, Madhubani remaining stationary:—

SUBDIVISION.		April 3rd.	April 10th.	April 17th.	April 24th.	May 1st.
1		2	3	4	5	6
Sadar	{ Civil Agency	26,841	28,420	31,011	37,393	41,790

Total Public Works Department Agency		41,089	48,117	49,123	49,600	54,274
GRAND TOTAL.		86,833	98,273	1,04,561	1,14,717	1,21,278

69. Paragraphs 17 to 27 of Mr. Carlyle's report contain a valuable and interesting criticism on the pit-gang system which may be read: as soon as the reports on this subject are received from all districts, they will be collated and a separate report submitted. In the meanwhile I propose to circulate to other officers for information and guidance Mr. Carlyle's account of the modified system introduced by Mr. Blackwood. I have seen the system working and it succeeded admirably.

70. Gratuitous relief has increased slowly in the three weeks from 65,685 adult units to 64,068: the rise is equivalent to 13.02 per cent. The dole is now steady at about 9.7 pie, except those distributed by Public Works Department Agency, which are all to children dependants on relief works.

71. Poor-houses were opened in eight places as before: the daily average of inmates in the last week of the period was 238, as against 194 in the last week of the previous fortnight. Mr. Carlyle notices that children are not being properly fed, and I shall be glad to see him open kitchens in several places, as has been done in Sitamarhi.

72. The Darbhanga Raj had a daily average of 18,347 persons on relief works during the fortnight, and 10,334 on gratuitous relief.

PART III.—CONCLUSION.

73. The three weeks under review have been a period of steady progress, and it has witnessed the introduction of one or two improvements in administration. There has been a rise in the numbers both on relief works and in the receipt of gratuitous relief, but these have not been so great as has sometimes been anticipated.

74. There was rain in all districts on the 20th and 31st April, and in most on the 28th. This fell in scattered showers, varying as much in intensity as in locality. The result has been purely beneficial, except in the few cases where damage has been done to indigo, for the rain has refreshed the crops on the ground—sugarcane, *china*, *moong*, early rice and *janera*, has gone far to secure pasturage, and has to some extent filled the wells and tanks.

75. Crop prospects in these circumstances are excellent, and it is the subject of universal remark that lands have been prepared for *bhadoi* and early rice this year unusually early, and to an unusually large extent.

76. The public health continues good everywhere except in Bhabua, where there has been a good deal of small-pox, and in Patna City, where (as is always the case at this time) cholera has broken out. Cattle disease has been very bad in Patna City and in parts of Darbhanga.

77. Prices remain fairly steady with a tendency to rise slowly: in one or two outlying tracts in Bagaha and Hardih, in Champaran, they are very high, and in Bahora, in Darbhanga, the Collector reports that they are kept up by a combination, not of bunniahs, but of zamindars. I give as Appendix B a statement showing the prices of common rice, wheat and barley on the last Saturday of each of the last seven months: it will be seen that the rise is nowhere alarming.

78. The imports and exports of the past three weeks are set forth below:—

DISTRICT.	IMPORTS.		EXPORTS.		EXCESS—I. OR E.	
	Fortnight ending 10th April 1897.	Three weeks ending 1st May 1897.	Fortnight ending 10th April 1897.	Three weeks ending 1st May 1897.	Fortnight ending 10th April 1897.	Three weeks ending 1st May 1897.
1	2	3	4	5	6	7
	Mds.	Mds.	Mds.	Mds.	Mds.	Mds.
Patna	68,856	1,10,890	51,335	70,114	I. 17,231	I. 46,776

Shahabad	1,499	4,872	2,314	7,934
Saran	36,870	32,169	44,247	68,435
Champaran	13,580	34,907	56,800	26,657
Muzaffarpur	11,670	16,051	15,074	36,182
Darbhanga	4,542	6,814	19,943	63,139
Total	78,132	1,02,712	1,62,568	2,60,867

paran imports still exceed exports, but the balance is smaller than before. Shahabad has again been exporting her *rabi* so fast that the balance is heavily on the side of exports. The increase in Darbhanga and Saran is very large. The imports of rice from Howrah are shown in the margin for the last four periods. There is a large rise on the whole in spite of the sudden fall in Champaran, the increase in Darbhanga being especially large.

79. The following statement shows the number of persons receiving relief on the 1st May as reported in the *Calcutta Gazette*, and the percentage to the population of the affected area in each district on that date and on the last day of four previous half-monthly periods. There is a rise everywhere except in Champaran, where the numbers and the ratio have been falling steadily since the 13th March. The increase is apparently greatest in Saran, but that is partly

due to a change in the Collector's estimate of the total population affected. Muzaffarpur has advanced $1\frac{1}{2}$ and Darbhanga about 1 per cent.:—

DISTRICT.	Estimated population of affected area.	Number in receipt of relief of all kinds on 1st May.	PERCENTAGE RECEIVING RELIEF ON THE—

Total	1,69,691				82,472		1,85,034		1,73,360				47,884		2,20,326		

There is an increase of 3,759 in the average daily numbers of male units on task-work equivalent to an advance of 2.21 per cent. Including those on daily wage irrespective of task, the advance is 29,111, or 15.15 per cent. The large advance in those under the latter category is due to the inclusion of those paid for Sunday.

81. As is natural, with both officials and people becoming daily more familiar with the work to be done, the daily average outturn is rising and the cost rate falling; the mean outturn of the five districts represented is 39.59 against 35.8 cubic feet and the mean cost rate nearly Rs. 2-7-2 instead of Rs. 2-12-2. So, too, the range of discrepancy under this head is shrinking; in the previous fortnight the highest outturn (Muzaffarpur was 25 cubic feet, and the lowest Champanan 25 cubic feet) giving a range of 27 cubic feet, in the three weeks under review, the highest outturn was 56.8 cubic feet and the lowest 31 cubic feet, a range of 25.8 cubic feet, Muzaffarpur and Champanan again occupying the extremities of the scale. In respect of cost rate the difference is now only between Rs. 3-1-7 in Champanan and Rs. 1-10-2 in Muzaffarpur, as against Rs. 3-13-11 and Rs. 1-11-6 in the same two districts previously.

82. In gratuitous relief there has also been an advance of 34,692 in the daily average number of adult units relieved, which is equivalent to 18.88 per cent. There is still some variation in the average dole which, in both periods, is lowest in Saran, owing partly to the cheapness of the grain taken as the equivalent, and highest in Champanan.

83. The distribution of works, as between the Civil and the Public Works

DISTRICT.	Civil Agency.	Public Works Department Agency.	Total.
1	2	3	4
Shahabad ...	7	7
Saran ...	33	6	39
Champanan ...	54	27	81
Muzaffarpur ...	74	20	94
Darbhanga ...	108	44	152
Total ...	276	97	373

Department Agency, is given in the margin. During the past three weeks the total number of works open has increased by 51, the advance having been 41 under Civil Agency and 10 under Public Works Department Agency; as before, the Public Works Department seem to be much hampered by the difficulty of obtaining qualified subordinates. During the period under review the important step was taken of authorising a

modified system of piece-work on the principles finally laid down in Government Resolution 181 of the 6th instant. As far as my information goes, this system is actually at work only on the Tribeni canal in Champanan and the Bhagmati canal in Muzaffarpur, but I trust that within the current fortnight it will be extended to the other large works indicated in the Resolution, and perhaps in the Samastipur subdivision in Darbhanga, and in certain parts of Saran.

84. I have also drawn special attention to the necessity of checking more carefully than ever the measurements on relief works and exacting an honest task. I have also reminded District Officers that if the price of grain falls, the basis of the grain equivalent has to be altered. It is only the strict observance of these precautions that will prevent a large influx, not only of those who really require relief, but of all those also who are out of work at this the slackest season of the agricultural year.

85. Between the date of my last report and the present date, seven officers of the Indian Staff Corps have reported themselves to me for famine duty and have been posted as follows:—Mr. Harding, 19th Madras Infantry to Saran, Mr. MacBarnett, 5th Punjab Cavalry to Champanan; Messrs. Bliss, 21st Madras Pioneers; Harvest, 9th Madras Infantry, and Fagan, 6th Madras Infantry to Muzaffarpur; Mr. Hudson, 22nd Madras Infantry, and Hole, 19th Madras Infantry, to Darbhanga. Mr. Harvest has since been recalled for civil employment elsewhere. Some 60 non-commissioned officers and soldiers of the British Army have also arrived, and been posted to the four north Gangetic districts: it is perhaps too soon to judge of the usefulness of these men, but I may be allowed to note that many of them are hardly of the type that we hoped to receive; a majority being young soldiers with little knowledge of the country and little ability to provide for themselves. I have for the present stopped the supply.

86. Details of the amounts advanced in each district during, and previous to, the last period are given below. Shahabad is the foremost so far, but in all districts many applications are pending, which will be disposed of as soon as possible.

DISTRICT.	Amount advanced up to the 31st March 1897.	AMOUNT ADVANCED SINCE THE 1st APRIL 1897.			REMARKS.
		Previous to period under report.	During period under report.	Total.	
1	2	3	4	5	6
Patna	
Gaya	
Shahabad ...	1,950	2,900	3,725	6,625	
Saran ...	9,952	746	1,432	2,178	
Champanan	155	2,000	2,155	
Muzaffarpur ...	3,100	450	1,617	2,067	
Darbhanga ...	1,412	37	(a) 3,862	3,900	
Total ...	16,414	4,288	12,636	16,925	(a) Not stated whether advanced under the modified rules or not.

87. During the period under review, a sum of eight lakhs of rupees in all was allotted for expenditure in this division by the Executive Committee of the Indian Famine Charitable Relief Fund. This sum was distributed by me on the 19th April, as detailed in the margin.

	Rs.
Shahabad	25,000
Saran	1,15,000
Champaran	1,89,000
Muzaffarpur	2,15,000
Darbhangha	2,56,000
Total	8,00,000

Subsequently, as the outcome of certain correspondence with the Secretary of the Fund, another sum of five lakhs of rupees was allotted to this division. A circular distributing this sum was in print and about to issue, when I received intimation that the allotment might be reconsidered, and I have therefore taken no steps to distribute this further sum of five lakhs.

88. The usual statement of expenditure is appended. It will be seen that so far as these figures go, the expenditure to date has been Rs. 27,71,084, of which Rs. 17,10,920 were spent up to the 31st March last, leaving an expenditure in the month of April of Rs. 10,60,164. During the last three weeks a sum of Rs. 6,58,719 has been expended. Of the total expenditure to date, Rs. 19,80,387 has been spent on relief works, and Rs. 7,38,466 on gratuitous relief.

89. The usual statements and maps are appended, but as this report is already very late, I do not delay it further to add any remarks on the progress for the month of April. The statements from Darbhanga have not been checked. I have already forwarded to Government a memorandum giving such information as I have been able to procure on the subject of food stocks, and a careful note on the agricultural operations of the next six months, prepared by Mr. Stevenson-Moore, Settlement Officer of North Bihar.

No. 106F., dated Bankipore, the 10th May 1897.

From—T. INGLIS, Esq., Collector of Patna,
To—The Commissioner of the Patna Division.

I HAVE the honour to submit the following half-monthly report under section 24 of the Bengal Famine Code for the three weeks ending 17th and 24th April and 1st May 1897.

2. SECTION 24 (1).—*Area affected, &c.*—No change.

3. SECTION 24 (2) (a).—*General state of the affected tracts, &c.*—The condition remains unchanged though the critical period anticipated has set in. The agricultural operations in connection with the standing crops, viz., sugarcane, millets (choena), banga, cotton, tobacco, still afford employment to a considerable number of the agricultural poor. The annual house repairs and the marriage festivities also support not an inconsiderable population. The marriage season has fortunately come off later than usual and at a time when the poor classes would otherwise be largely unemployed. The April rains, if followed by rain in the Rohan asterism, which begins early in Jeth, will, I hope, provide the agricultural classes with sufficient employment up to the *bhadoi* harvest. The District Board repairs to unmetalled roads have failed to attract this class who will not work for 2½ annas, nor in some places even for 3 annas. In Patna this morning coolies could not be obtained for unskilled work at 3 annas. The road repairs have been given out to contractors in order to get the work completed before the rains set in. The recent occasional rains have been distributed all over the district.

4. SECTION 24 (2) (b).—*Crop prospects.*—The prospects of the crops now on the ground—sugarcane, millets, vegetables, cotton—are hopeful. The recent rainfall has done them much good. The damage done to the *rabi* crops at the threshing floor was immaterial. It has improved the supply of fodder.

5. SECTION 24 (2) (c).—*Food-stocks.*—I have no doubt that food-stocks are sufficient. There are no signs of depletion. The large excess of imports over exports during these three weeks shows that cultivators are holding on to their *rabi* crop as they have been holding on to the rice crop.

6. SECTION 24 (2) (d).—*Importation or exportation of food-grains.*—The export amounted to 70,114 maunds, or 46,776 maunds less than the imports. The former consisted principally of "Grain and pulses" sent mostly to Howrah, Allahabad, Lucknow, Gaya, Gwalior, by rail, and to Sahibganj by river. The chief exporting centres were Mokameh, Barh, Patna Ghat and Khusurpur.

Rice was exported in small consignments, destined for the most part for Allahabad and Daronda by rail, and Gopalpur, Lalgauj and Reva by steamers, to the extent of 4,602 maunds. The largest consignment of 526 maunds went to Daronda.

The imports consisted mainly of rice (amounting to 85,111 maunds) drawn mostly to Patna Ghat, Mokameh, Barh, Bankipore and Bihta. The imports were fairly distributed over the district. The bulk of the imports came from Howrah, Burdwan, Bolepur, Ahmadpur, Raniganj, Mollarpur and Durgapur by rail. The river traffic was too small to notice.

Wheat was imported to the extent of 12,440 maunds by country boat, principally from Dohrie, Gola, Gopalpur, Burhuj and Tewarihatti.

The following quantities of the food-grains specified below were imported from the stations named in the Commissioner's Famine Circular No. 15 of 1897:—

		Rice. Mds.	Paddy. Mds.
Howrah	...	45,864	5,281
Kidderpore (Docks)	...	2,639	Nil
Calcutta	...	Nil	Nil
Sealdah	...	Nil	Nil
Total	...	48,503	5,281

7. SECTION 24 (2) (e).—*Rainfall.*—The following figures were recorded during the three weeks under report:—

Station.	Week ending 24th April.	Week ending 1st May.
Sadar	0.95	Nil
Bikram	0.50	0.09
Barh	0.27	Nil
Bihar	0.33	0.32
Hilsa	0.70	Nil
Dinapore	0.56	Nil

There was no rainfall during the first week. The rain in the week ending the 24th April was looked on as unusual by the residents of this district, who are now anxious in the fear that the rains may also be abnormal. The rain followed in the wake of a "nor-wester"—a not uncommon occurrence in Bengal Proper.

8. SECTION 24 (2) (f).—*Public health*.—Cholera and small-pox prevail throughout Patna City and in parts of the Barh subdivision. Small-pox of a mild type is also prevalent in Bihar.

The number of deaths in Patna, according to the latest reports, amounted to 268 from cholera and 14 from small-pox.

No deaths have been reported from Bihar.

9. SECTION 24 (2) (g).—*Emigration or immigration of famished people*.—Nil.

10. SECTION 24 (2) (h).—*Condition of cattle*.—Rinderpest still continues in Patna. It is confined to the limits of the Pirbahore and Sultanganj thanas, and is said to be under control: 104 deaths are reported.

The segregation camp under the Veterinary Assistant, maintained at the joint expense of the District Board and the Patna Municipality, is reported to be doing good work.

The opposition on the part of the owners to send their cattle, affected or suspected, to the camp is being gradually overcome.

Three cases of anthrax, all fatal, were also discovered in Patna. Segregation was immediately enforced. No more cases have occurred.

Green fodder is becoming scarce, but the rainfall has improved the supply to a considerable extent.

11. SECTION 24 (2) (i).—*Prices*.—Prices are oscillating, showing a tendency to rise, which is specially noticeable in common rice in all the subdivisions, except Bihar. Wheat shows improvement in Sadar and Barh. The rise in Bihar, where a considerable area was under this cereal, is probably due to the cultivators having ceased to sell.

The usual list of prices is appended.

12. SECTION 24 (3).—*Relief Works open, &c.*—Nil. The District Board's annual repairs of roads started at convenient centres all over the district to meet the wants of unemployed labour, and have failed in their object. No one will work for 2½ annas, and in some places even for 3 annas, though tools and baskets and daily payments have been provided for. I have been obliged to make the work over to contractors.

13. SECTION 24 (4).—*Poor-houses, &c.*—There were 55 men, 40 women and 16 children in the Bankipore poor-house. Cooked food is distributed on the scale laid down in the Code.

There were four deaths, including those of two children who were received in an emaciated condition with their parents, though the latter were in good condition. They were quite young. Most of our inmates come in bad health when their strength failing them; they were unable to go about begging. The Code ration is supplemented occasionally from presents made by the visitors, and clothes are given from the Charitable Relief Fund.

14. SECTION 24 (5).—*Organisation for employment of artisans, &c.*—Nil.

15. SECTION 24 (6).—*Grain doles or money doles*.—Relief is given in money doles through the Charge Superintendents for reasons explained in previous reports.

The Charge Superintendent of thana Masandhi made a village-to-village enquiry into the condition of the people entitled to gratuitous relief, and made advances, amounting to Rs. 44-3-6, to meet urgent cases of destitution. These were paid to punches and other respectable persons of the village for distribution by grain doles through the village *bania*.

Seven persons, including children, were sent by him to the poor-house at Bankipore. It may be noted that all of these except one came from Gorakhpur or Saran.

Such of the recipients of relief above mentioned as fell under one or other of the four heads of Mr. Baker's Circular No. 1 have been directed by me to be transferred to the lists of the Charitable Relief Fund, to which the advances will be debited. In other cases relief will be continued at the expense of the District Board.

16. SECTION 24 (7).—*Relief in kitchens*.—Nil.

17. SECTION 24 (8).—*Loans*.—A sum of Rs. 250 has been advanced to five persons, on an average of Rs. 50 to each, under the Agriculturists' Loans Act. Occupancy holdings have been mortgaged by the recipients in security of repayment of the loan. Individual securities have been accepted after necessary enquiries.

The rate of advance has been the standard fixed by the Commissioner, *v.c.*, Rs. 4 for each bigha of occupancy tenure. Eleven applications under the Land Improvement Loans Act and 108 under the Agriculturists' Loans Act were filed and distributed among the kanungo and Subdivisional Officers for enquiry and report. Those under the former Act will be struck off. I have asked the Deputy Collector, Maulvi Syed Mohamad, who receives these applications on my behalf to reject them directly they are put in.

18. SECTION 24 (9).—*Financial statement*.—The usual statement is appended.

19. SECTION 24 (10).—Nil.

20. SECTION 24 (11).—Nil.

21. SECTION 27 (iii).—*Water-supply*.—Wells have commenced drying up earlier and more widely than usual—a natural consequence of the drought which has now lasted two years.

The Subdivisional and other officers have been directed to keep up a special outlook and to devote a special paragraph in their half-monthly reports, anything of importance being immediately reported.

From the report to hand it is satisfactory to notice that nothing like a water-famine is apprehended.

The people are in places taking steps to protect themselves against such a contingency. This is quite within their power, but I notice that there is a tendency to look to Government to deepen the existing wells. This is impossible. As a temporary measure, the wells may be

cleaned or kutchra wells sunk, and this the villagers will see to themselves, and it would be more cruelty to hold out any hopes of Government, and which could not be effective over any large area, or with the short time at our disposal. The villagers will make their own arrangements as they did when the rains stopped in September, and kutchra wells were sunk by them all over the district for irrigation purposes.

Statistics of admissions into jail.—Out of 62 admissions during March last, 49 prisoners were in good health, 9 in indifferent and 4 in bad health.

The admissions of convicts in indifferent or bad health are not above the usual average.

Appendices.—The following statements are appended :—

- (1) List of prices.
- (2) Form 6 for each week.
- (3) " 7.
- (4) " 8.
- (5) " 9.
- (6) Famine Statement A.
- (7) " " B.
- (8) Abstract statement of exports and imports.
- (9) Weekly returns of the poor-house.

The map is not required.

General.—The district continues in the same condition. The current of the imports is in favour of the district, and the excess over exports is increasing. The only subject of import-
ance is the water-supply. There is no ground for alarm if the rains set in in due time and are evenly distributed over the district area.

FAMINE STATEMENT E.

DISTRICT PATNA.

Abstract statement of relief works and gratuitous relief for the three weeks ending 1st May 1897.

WEEK—	A, B, C, AND D WORKERS PAID BY TASK-WORK.				WORKERS PAID BY DAILY WAGES RESPECTIVE OF TASK.		Total amount disbursed on task work and daily labour.	GRATUITOUS RELIEF.		
	Average number of male units per diem.	Work done per diem by each male unit.	Wage earned by each male unit per diem.	Cost per 1,000 cubic feet.	Average number of male units per diem.	Wage earned by each male unit per diem.		Number of adult units in receipt of gratuitous relief.	Average daily dole.	Amount expended.
1	2	3	4	5	6	7	8	9	10	11
		C. R.	Rs. A. P.	Rs. A. P.		Rs. A. P.	Rs. A. P.		Rs. A. P.	Rs. A. P.
Ending 17th April 1897	798 (a)	0 1 4	7 12 8
" 24th "	3058 (b)	0 1 3	16 0 0
" 1st May	699 (c)	0 1 2	2 10 9

(a) This figure represents the daily average of the week exclusive of the figures for the poor-house against which no expenditure has been mentioned in Form 6. Reduced to terms of one day, the aggregate for the week would be 59 86, or 57 in whole numbers. The average dole has been calculated on the latter figure on the basis of the relative payments for the week, amounting to Rs. 4-13, as explained in the remarks in the last column of Form 6.

(b) This figure represents the daily average of the week exclusive of the poor-house against which no expenditure has been mentioned in Form 6. Reduced to terms of one day, the aggregate number of adult units would be 215 92 or 214 in round numbers. The average dole has been calculated on the latter figure on the basis of the proportionate payments for the week, amounting to Rs. 17-9-6, as explained in the remarks in the last column of Form 6.

(c) This figure represents the daily average of the week exclusive of figures for the poor-house against which no expenditure has been mentioned in Form 6. Reduced to terms of one day, the total number of adult units would be 18 63 or 19 in round numbers. The average dole has been calculated on the latter figure on the basis of the proportionate payment for the week, amounting to Rs. 3 10-6, as explained in remarks in the last column of Form 6.

T. INGLIS,
Collector.

No. 327G., dated Gaya, the 4th May 1897.

From—H. SAVAGE, Esq., c.s., Collector of Gaya,
To—The Commissioner of the Patna Division, Bankipore.

I HAVE the honour to submit Famine Report for the second-half of the month of April 1897. The figures relate to the period under report, with the exception of statements 8 and 9, which are for the two weeks ending 17th and 24th ultimo, as information for the week ending 1st May has not yet been received.

2. *Section 24* (1).—No area is affected by famine.

3. *Section 24* (2).—Crop prospect. Harvesting of *china* is nearly completed. Sugar-cane is doing well. During the period under report I visited the south-eastern part of the district where *mahua* is largely grown, and found that the crop, though somewhat damaged by rain and hail, is much superior to last year's crop.

4. *Prices of food-grains*.—The subjoined table (Appendix A) shows the prices of the principal food-grains for each subdivision. Prices are hardening. There are, however, no signs of distress as yet.

5. *Importation or exportation of food-grains*.—The figures of statements 8 and 9, annexed to this report, show:—

				Mds.
Import	22,691
Export	977

against 11,244 and 1,177 maunds respectively of the previous fortnight, leaving a net excess of import of 21,911 maunds during the period under report. One thousand three hundred and ninety-three maunds of Burmese rice and 836 maunds of country rice (total 2,232 maunds) have been exported to Daltonganj, against 2,179 maunds of the previous fortnight. The principal item of import by rail is rice (17,630 maunds). Rice came here from Howrah (10,027 maunds), Bolepur, Burdwan and Raniganj. No rice came from Calcutta, Sealdah or Kidderpur.

6. *Rainfall*.—There has been no rainfall during the period under report, except 0.62 of an inch on the 29th ultimo at Nawadah.

7. Public health continues extraordinary good. The death-rate per mille for the month of March last was 1.9 against 3.4 for the corresponding period of 1896.

8. No case of emigration or immigration of famished people has come to my notice.

9. *Section 24* (3).—Relief works. Nil.

10. *Section 24* (4).—Ninty-eight persons were on the average fed daily at the cook-house at Kusa, the quantity of rice, &c., country consumed being 82 maunds during the period under report.

11. An average number of 133 and 86 persons were respectively fed daily at Aurangabad and Madanpur kitchens, at a daily cost of Rs. 5 in each place.

12. The kitchens at Barachatti fed 775 persons at a cost of Rs. 35.

13. The average number of persons relieved daily at the Nawadah kitchen was 38 against 46 of the previous half month. Grain doles were also distributed daily to 11 persons who refused to take cooked food, or to those who came after the distribution of the cooked rice. The cost incurred amounted to Rs. 168.

14. The Mahanth of Budhauhi distributed cooked food to 66 persons, and grain doles to 82 persons on an average per diem. The persons relieved are said to be travellers from up-country and *sadhus*, besides a few local *musahars*, &c. The quantity of grain distributed was about 10 maunds.

15. *Section 24* (5 to 7).—Nil.

16. *Section 24* (8).—No loan has been given under the Land Improvement Loans Act and the Agriculturists Loans Act during the period under review.

GAYA COLLECTORATE,
The 4th May 1897.

H. SAVAGE,
Collector.

No. 852F., dated Arrah, the 4th May 1897.

From—J. WINDSOR, Esq., C.S., Collector of Shahabad,
To—The Commissioner of the Patna Division.

I HAVE the honour to submit my report under sections 13 and 24 of the Famine Code for the second half-month of April 1897. The figures dealt with in the report refer to the weeks ending 17th and 24th April and 1st May 1897. The three weeks' figures have been dealt with according to the instructions contained in the Divisional Circular No. 20 Famine of 1897, dated 17th April last.

2. *Section 24(1); Area affected.*—As stated in my previous reports, the Rohtas plateau portion of the Sasaram subdivision and the narrow strip of land lying south of Akberpur have been hitherto under observation. The Subdivisional Officer of Sasaram has now reported that relief measures have become necessary in these tracts, and accordingly they have been included in the famine area. These tracts were fully described in the fortnightly reports Nos. 3198 and 3322, dated 3rd and 17th February 1897, respectively, and it is needless to recapitulate the facts here again. The area of the plateau is 195 square miles with a population of 3,472, and the approximate area and population of the tract south of Akberpur comes to 50 square miles and 6,000 people, respectively. These figures are subject to further modification on receipt of definite information regarding the area affected and the list of villages in that area called for from the Subdivisional Officer of Sasaram.

3. My attention has been drawn to the alterations made in the affected area, shown in the statement which accompanied my report for the second half of March last, and I have the honour to state as follows:—In the beginning of the operations about 640 square miles in the south-western portion of Bhabua subdivision became affected, and this was shown in the return. Subsequently, the whole subdivision and Chenari outpost of the Sasaram subdivision became affected and declared as under famine, but the area originally shown in the return continued to be repeated in the subsequent statements. However, the figures were partially corrected in the statement of March last, after making a reference to you, which formed the subject of correspondence, ending with your letter No. 893 of 1st April last. After the submission of my report for the second half of March, I had the area again checked in the office of the District Engineer. The correct figures of area now stand thus:—

				Square miles.
Charge No. I	316
„ No. II	276
„ No. III	260
„ No. IV	535
		Total	...	1,387
Rohtas plateau	195
Narrow strip south of Akberpur	50
		GRAND TOTAL	...	1,632

The last area is subject to further modification, as stated above.

4. The arrangements of charges and circles in the affected area remain the same as reported previously, with the exception of the Adhowra plateau, where a second circle officer has been appointed and placed at Deori about 8 miles south-west from Adhowra.

5. The newly added tracts of the Sasaram subdivision have not yet been manned. It is proposed to establish one circle at Rehah, which will embrace the whole plateau and the other at Akberpur to give gratuitous relief to villages lying south of it. This will commence as soon as the circle officers are appointed. I have also ordered the Akberpur-Jadunathpur Road and the excavation of Bamantolah tank on the Rohtas plateau to be started as relief works. I shall be able to give full details of the management of these tracts in my next report. The mahua plucking is now over and the people require work and relief, but I do not anticipate that the numbers on gratuitous relief or on relief works will be large in this newly-added area.

6. *Section 24 (2); (a) General state of the affected tract.*—The general condition of the people in the affected area has been fair. Public health is generally good and small-pox reported to be abating; there are, however, many cases of fever and deaths therefrom, but this is about normal for this time of the year. There was also one death from cholera reported. A munshi from the Hatta-Durgaoti Road, who was taken ill at Khelaspur, died in the hospital at Bhabua. There has also been three deaths from cholera at Buxar barrack during the period under report. No case has been reported from any other part of the district.

7. *Section 24 (2); (b) Crop prospect.*—China showing is going on in places where there is well irrigation possible, but china which was sown earlier is being reaped. The crop is doing well. Sugarcane is promising everywhere and employs a certain labour in irrigating and weeding, but this labour is supplied by the cultivators and their families as usual. The two falls of rain during the period in the Sadar subdivision have materially benefited these crops.

8. *Section 24 (2); (c) Food-stock.*—Forms 8 and 9 appended to the report will show that during the period under report 26,368 maunds of grain were imported by rail and 56,998 were exported. The corresponding figures for the preceding fortnight were 28,777 maunds and 28,407 maunds, respectively. The exports during the period exceeded the quantity of

grain imported by 30,630 maunds. The imports consisted chiefly of rice and exports of wheat, gram and pulses and other food-grains. Out of the imports 7,924 maunds of rice came from Howrah. A statement showing the quantity of rice and the stations to which imported is appended. The increase in exports is very remarkable, and shows that the rabi crops recently harvested are being largely sent to other districts. It also shows that food-stocks, except in the affected area, are ample and sufficient. As reported in my letter No. 330, dated 30th April, arrangements have been made to obtain statistics from Zamania and Buzar, and I expect to furnish figures for these from next fortnight complete. The Zamania figures given in Form 8 are for the week ending 1st May only.

9. The arrangements for the supply of grains in the affected area remain the same. As reported before, orders have not yet been received regarding the supply of grains on the Adhowra plateau. This matter had formed the subject of a separate correspondence, and my final proposal made in my No. 233, dated 10th ultimo, was to allow Makund Saho the cost of carriage in addition to the rate for grain in the plains. There will be six depôts on the Adhowra plateau and two on the Sasaram plateau, the latter being supplied with grain from Sasaram. The arrangements will be completed as soon as sanction is received.

PRICES.

10. A statement showing the prices at each subdivision annexed to the report, will show that the prices of staple food-grains during the period under report were nearly stationary, with a very slight tendency to rise.

11. *Section 24 (2) ; (d) Rainfall.*—During the period under report there has been some rain at Arrah and its vicinity, but none in any other subdivision of the district. The recorded rainfall of 21st April was 0·21 and that of 28th 0·43. The latter was attended with a little hail, but this was not sufficient to cause damage to china and sugarcane, the standing crops, and the rain benefited them. The mango crop has been much damaged by the rain and hail of 28th, which commenced with a high north-west wind.

12. *Section (2) ; (e) Public health.*—Public health has been generally good, as reported above.

A statement showing the mortality of the whole district and of the affected area, compared with the corresponding month of the previous year and the five years' average, is appended. The total number of deaths during the month of March for the whole district was 5,580 against 6,036 in the previous year, giving a death-rate of 2·70 against 2·92 per mille for the month. The figures for the affected area are 1,493 against 1,034 in the preceding year, and the death-rate 4·00 against 3·94 per mille. No deaths have been reported to be due to starvation.

13. From the above it would appear that this month, taking the figure for the whole district, was healthier than March of the previous year, but the number of deaths in the affected area has increased, which is due chiefly to the small-pox throughout the whole of the Bhabua subdivision and Chenari outpost of the Sasaram subdivision. The total number of deaths in the affected area caused by small-pox amounted to 270 against 11 in the corresponding month of the previous year, the number of deaths caused by fever and other diseases during this month being nearly the same as in the corresponding month of the previous year.

14. My attention has been drawn to this return of February, appended with the report, for second half of March last, which shows increased deaths in the affected area. This was due not only to small-pox, but also to an increase in deaths from fever. The total number of deaths in that area caused by small-pox during the month of February 1897, was 150 against 17 in February 1896, and by fever 997 against 781, respectively. It appears that last year, February was much healthier than March, whereas this year the difference in favour of February was only slight. It should also be noted that Bhabua always shows a higher death-rate than the rest of the district in normal years. The average for five years cannot be accepted as being as correct as the current figures. Registration has gradually improved.

15. I annex a statement showing the health of prisoners admitted in the district jail during the month of April 1897, as furnished by the Superintendent of Jail. This statement does not show any decline in the health of prisoners admitted in the jail, and requires no special notice.

16. *Section, 24(2F), Emigration and Immigration.*—There is practically no emigration or immigration now, except travellers on the Grand Trunk Road.

17. *Section 24(2G), Condition of cattle.*—The condition of cattle in the Bhabua subdivision is reported to be bad, and cases of death are more noticeable. The Subdivisional Officer of Bhabua reports that he has seen cattle dying by the roadside; but in my last tour, although I noticed a certain number of enfeebled cattle, I did not consider that there was any marked deterioration in their condition compared with ordinary years. The supply of fodder and water is deficient, but there is no complaint of this in any other part of the district than the affected area.

18. *Section 24(3) ; Relief Works.*—During the period under report two of the relief works have been closed and two new ones have been opened. The works open at the end of the period were :—

- | | |
|-------------------------|-------------------------------|
| 1. Hata-Karamnasa road. | 4. Bhabua-Jahanabad road |
| 2. Hata-Dharauli road. | 5. Bhabua-Sahar road. |
| 3. Rajghat-Bhabua road. | 6. Jahanabad-Mullickpur road. |
| 7. Adhowra tank. | |

In addition to these seven works, the Sahar tank is being excavated at the cost of the ward, but under Government supervision.

19. The Hata-Bhabua road has been finished and the staff transferred to the Bhabua-Rajghat road. The Hata-Durgaoti road has been closed, as the railway authorities have increased their rates for earthwork to Rs. 2-8 per 1,000 cubic feet, and it was not thought desirable to have a large work open near at hand which might compete with the railway. During the past three weeks the rates of wages on relief works have been decreased by one pice all round, and the new rates are based on the mean of rice at 8½ seers and pea at 10½ seers, which gives a rate of 9½ seers. The new wages are:—

			Maximum.	Minimum.	Penal.
			As. P.	As. P.	As. P.
Diggers	2 0	1 6	0 9
Adult carriers	1 6	0 9
Child	0 9	0 6
Dependent child	0 3

The introduction of this rate has caused some grumbling, but there has been no distress among the labourers on account of this reduction. In my tour, which lasted from 19th to 23rd ultimo, I inspected all the relief works and paid special attention to this question of wages. I found generally that when the labourers clearly understood the new scale of wages, they as a rule were moderately satisfied. It was the stoutly-built professional labourers who made the most outcry. It is not possible to fix a standard which shall absolutely agree with prices, but the wages, as given above, enable the labourers to purchase the grain equivalents as prescribed in the Famine Code.

20. The total number of labourers employed on the last day of the period, i.e., 1st May, on task works, was 5,898, and on daily wages irrespective of task 1,050, against 9,880 and 457 on the last day of the preceding period.

21. The following table compares the daily average of male units on task-work and daily wages irrespective of task, daily outturn, and the cost per 1,000 cubic feet for the last five weeks:—

Week ending	Number of works.	Task work.	Daily wages.	Total.	Average daily outturn.	Cost per 1,000 cubic feet.
1	2	3	4	5	6	7
3rd April 1897	7	7,196	516	7,712	39	Rs. A. P. 2 13 2
10th " "	7	6,417	619	7,036	35	2 14 1
17th " "	7	7,297	909	8,206	35½	2 12 1
24th " "	7	5,174	855	6,029	39	2 7 2
1st May "	6	4,196	668	4,864	39	2 3 7

22. The decrease in the number of labourers is noticeable to a certain extent on all the works. This is due to several causes; first of all to the decrease in the rate of wages, which has driven away all who came on to the works to add to their income, and not because they required the wages for the sake of subsistence; *secondly*, to the closing of the Hata-Bhabua and Hata-Durgaoti roads, which employed a large number of labourers, whereas the Bhabua-Rajghat and Bhabua-Jahanabad roads are not yet fully attended; and *thirdly*, to the increase in the railway rates, which has induced all professional labourers to go to the railway line rather than earn a famine wage on our works, and *fourthly*, to the fact that several private works have been opened which absorb a certain amount of labour. The number is now the same practically as in the week ending 27th March. Under these circumstances, I am of opinion that the number of relief works now in progress is sufficient, and that there will not be any considerable increase in our numbers. The railway rates should continue to attract more and more labour as they become generally known. The daily outturn is fairly satisfactory considering the hard soil on some of the roads. In my recent inspection I was, on the whole, satisfied with the management of the works and the amount of work done by the labourers. The tasks are quite as high as they can be made, considering the nature of the soil and the recent reduction in wages. On two of the roads many of the labourers were content to do a task which gave them only the penal wage, showing that they did not depend upon the relief works for their subsistence. The reduction in wages will tend to eliminate these people. On only one road (Jahanabad-Mullickpur) did I find the workers out of hand. I raised the task, and the labourers left in a body. The management had been slack, and the distress there (Chenari outpost) is not as keen as in Bhabua Proper. Mr. Stephenson reports that more than half the workers returned next day, and have done the prescribed task steadily. The reduction in the cost per 1,000 cubic feet is due to the lowering of the wages. The pits system

has been a complete success in this district. There has been no difficulty in finding carriers, as on road works one adult carrier and one child can carry for one digger. In fact, the difficulty has been to find sufficient diggers for the carriers. We have all along worked with small gangs of one digger and his carriers. In this way payments are more certain, and the labourers are better satisfied than with the four-digger gang. The numbers on the works have never been so great as to make it impossible to measure and settle up separately with each digger. Suitable arrangements for hutting and for water-supply and sanitation have been made on all the works, and the absence of any epidemic or any sickness among the labourers is evidence of the care taken in this respect. There are no D class workers shown in the returns, as none of the labourers are so weakly as to be given a specially light task; the same task is fixed for all workers. The condition of the workers struck me as being very good indeed on the whole. Some of them showed signs of the times being hard, but there was nothing approaching emaciation. Other private works besides the Sahar tank are tanks at Patesar and Sersi, which are being excavated by Shaikh Elahi Buksh, large gilandasi works in Dumraith by Muhammad Hossein, and a tank at Bhabua. The Sahar tank has a daily average of 678 persons, and the other works employ about 1,000 labourers daily.

23. On the Moghalsarni-Gaya Railway 6,702 men, women and children were employed during the week ending 17th April, 9,236 during the week ending 24th April 1897, and 10,231 during the week ending 1st May 1897. Since the increase of rates from Rs. 2 to Rs. 2-8, there has been considerable increase in the number of labourers, but the Railway Company complain that they are still short of labour. I have asked the Subdivisional Officer of Bhabua to enquire and submit a full report about the number of labourers on railway works and wages earned in his next report. I anticipate a further increase in the numbers on the railway line.

24. *Section 24 (4): Poor-house.*—The number of poor-houses and kitchens remain the same as reported before. All were open during the period under report, and continued distributing food to needy persons. The daily average number of persons relieved in these poor-houses and kitchens was as follows for the period under report:—

Week ending 17th April	581
Ditto 24th "	610
Ditto 1st May	701

25. *Section 24 (5): Organization, &c.*—The same as reported before.

26. *Section 24 (6): Organization of doles.*—Gratuitous relief is given in grain-doles, and the arrangement remains the same as reported in the previous fortnight. The following table compares the figures for the weeks and the cost per head:—

Week ending	Men.	Women.	Children.	Total.	Cost per head male units.
1	2	3	4	5	6
3rd April 1897 ...	4,093	8,594	7,249	19,936	10½ pias.
10th " " ...	4,422	9,586	7,783	21,791	10½ "
17th " " ...	4,455	9,869	8,132	22,456	10 "
24th " " ...	4,664	10,514	8,282	23,460	10 "
1st May " " ...	4,456	10,218	7,843	22,517	9½ "

Mixed doles of rice and gram have been supplied wherever gram could be procured, and in the Ramgarh charge mixed doles of wheat, flour and gram have been given. The average dole has therefore slightly decreased. In my last tour I inspected several hundreds of people in receipt of gratuitous relief, and except in a very few cases of women, whom I ordered to be sent to relief works, I did not find that any persons had been wrongly placed on the lists. I have gone into this question in more detail in my No. 309F., dated 27th April, and you have agreed with the conclusions at which I arrived. Careful checking has slightly decreased the total numbers on relief. It should be noted that the following are the numbers of children included in the lists who are dependents of relief workers, and who are retained on the works:—

Week ending	Children dependent of relief workers.
17th April 1897	1,697
24th " "	1,002
1st May "	970

Section 24(8).—There were 18 petitions under the modified rules of the Land Improvement Act, and 2,017 under the Agriculturists Loans Act at Bhabua during the period under report, of which 7 petitions, to the extent of Rs. 3,725, were granted under the former head

and 142 petitions for Rs. 2,735 under the latter head. No payments were made any where else, except at Bhabua, during the period under review.

The total amount advanced during the period under the modified rules amounts to Rs. 3,725, and that in the preceding fortnight amounted to Rs. 2,900, making a total of Rs. 6,625. The amount advanced during the preceding year under this head amounts to Rs. 1,950.

1,950.
The necessary statements and maps are annexed.

J. WINDSOR,
Collector.

No. 1846F.—G., dated Chapra, the 6th May 1897.

From—E. P. CHAPMAN, Esq., Officiating Collector of Saran,
To—The Commissioner of the Patna Division, Bankipore.

IN continuation of my letter No. 1150, dated 17th April 1897, I have the honour to submit my famine report for the three weeks ending the 1st May.

2. SECTION 24 (1).—*Area affected during the period under report and approximate estimate of the portion of population affected.*—The demarcation of distress in the Siwan subdivision

	Area in square miles.	Population.
Gopalganj thana	358	275,023
Minus non-affected tract	126	50,400
	232	224,623
Mirganj thana	435	359,807
Minus non-affected tract	7	2,800
	428	356,807
Siwar subdivision	829	800,738
Minus non-affected tract	412	397,916
	417	402,822
Sadar subdivision affected tracts ...	435	431,994
Total affected tracts	1,512	1,416,176

has been revised. It must be remembered that an excellent rabi harvest relieved the greater part of the subdivision at the end of March. The situation, therefore, was completely altered. The revised map, which is herewith annexed, shows the area where serious distress is expected shortly to ensue, and not exactly that in which it has existed during the month. The figures, as they now stand, are given in the margin. Two small areas—one in the Ekma outpost, and the other to the north of Amnour—have been added to the tracts in the Sadar.

3. SECTION 24 (1).—*Number of relief circles and of officers in charge.*—A statement appended shows the names of Charge Super-

intendents and Circle Officers. Mr. Grimley relieved me of the West Chapra charge on the 20th April 1897. The number of Circle Officers has increased from 64 to 66, two more officers having been appointed in the Sadar subdivision, where the numbers on gratuitous relief have been increasing rapidly.

4. SECTION 24 (2).—*General state of the affected tract during the half month under report.*—The Siwan subdivision, as was expected, gave no cause for anxiety during the month, and relief operations were on a small scale. Mr. Lyall is, however, preparing for a considerable increase of distress in the course of May. In the Gopalganj subdivision the conditions have been somewhat alleviated by the harvesting of the rabi. The relief offered to the people has been more than ample, and the feeling of anxiety has much diminished. In the Sadar subdivision the rabi crop made little difference to the tracts more seriously affected. The continued strain of high prices has not been without its effect, and many families have been put to hard straits. At the same time both panches and Circle Officers have learnt how to make use of the opportunities given by the panch's lists and thereby relief has been brought within easier and more certain reach of the village poor. The result has been a considerable increase in the figures. I suspect, however, that the number includes many cases which the panches have recommended, though not really deserving, and which the Circle Officers have accepted without enquiry. I have urged on Mr. Grimley the necessity of taking strong measures to check this. Circle Officers also cannot have drafted all the suitable cases on to relief works. This matter will receive special attention. The yearly migrants to Lower Bengal have not yet returned in large numbers. The first Commissioners are reported to have brought back with them considerably less than usual. Their return, however, will necessarily tend to the alleviation of distress for the time. The large amount sent by small money-orders into the district must also have added to the resources of the people.

5. SECTION 24 (2).—*Crop prospects.*—Every available plot of suitable land seems to have been sown with cheema. The crop is an excellent one, and its constant harvest means a very considerable increase to the food-supply of the district.

(b) Paddy is coming up well in the low-lying chars, and janera looks very promising in places. Sugarcane is also doing well. The mango crop will, I am afraid, prove a failure.

6. SECTION 24 (3).—*Food-stocks.*—There is no cause for anxiety under this head at present. The bazars show no signs of depletion, and the rabi harvest is not yet exhausted.

7. SECTION 24 (4).—*Importation and exportation of food-grains. Itinerary statistics.*—The import and export statistics in the three weeks under review show a steady advance. This means that the produce of the harvest is still ample in the markets. Rice was chiefly imported from Howrah, Burdwan, Raniganj, Nirmah (district Bhagalpur), Balliaghat, Aska Bazar and Nalhati; wheat from Khalilabad, Basti, Monghyr, Tashil Deoriah and Nawabganj (Gonda); and other food-grains from Tashil Deoriah, Gorakhpur, Aska Bazar, Bhatpur and Gorakhpur. Exports of rice were chiefly to Balliaghat, of wheat to Howrah, Sitamarhi and Muzaffarpur, of gram and pulses to Muzaffarpur, and of other food-grains to Hajipur Ghat, Howrah, Bhagalpur and Darbhanga.

Revelganj Statistics.—Imports increased from 3,450 maunds to 15,331 maunds, while exports declined from 1,539 to 1,341.

Rice was chiefly imported from Murshidabad and Malda; gram and pulses from Ballia, Patna and Arrah, and other food-grains from Ballia, Bhagalpur, Patna and Azimgarh. Exports of rice and other food-grains were chiefly to Ballia.

Sattarghat Statistics.—Imports increased from 442 maunds to 1,304 maunds, while exports declined from 1,243 to 490.

Imports were chiefly from Muzaffarpur, Nepal and Champaran.

8. SECTION 24 (2).—*Prices*.—The prices of the rabi cereals vary considerably in different parts of the district. The tendency is towards a slight rise, specially in grain, which was poor this year. Wheat is a good deal cheaper owing chiefly to imports. There are indications of a rise in the price of rice. This is what is to be expected.

9. SECTION 24 (2).—*Rainfall*.—Rain fell all over the district on the 21st and 28th April. This has done great good to the grass as well as to the chenna, and has dispelled all fear of scarcity of fodder for cattle for the present.

10. *Public health*.—(a) Small-pox has shown itself in places, and there is cholera in one of the Garkha villages, otherwise public health continues excellent. Special efforts have been made through Charge Superintendents for the cleaning and disinfecting of wells.

(b) The monthly death-rate is given in form 10. It is above the normal, and shows an increase of .85 over the previous month. The chief increase is under the head of fever and other causes. As the increase has occurred all over the district, and not in any particular localities, it should not be regarded as any cause for apprehension.

11. SECTION 24 (2).—*Emigration or immigration of famished people*.—The total number of persons from the Gorakhpur district that have found their way into the poor-houses is 33.

12. SECTION 24 (2).—The condition of the cattle is good. The only fear is scarcity of drinking water in a few places, and in these loans for wells under the special rules are being encouraged.

13. SECTION 24 (3).—(a) The number of relief works has been 33 under Civil Agency and 6 under Public Works Department. The cause of increase in the number is that the extension of relief works is being pushed on to meet the demand expected in May.

(b) A daily average of 3,060 male units under Civil Agency and 465 under Public Works Department received daily wages irrespective of task. The number for task-workers was 9,264 on Civil Agency and 4,337 on Public Works Department works. The number of non-task-workers on Civil Agency works is excessive. The West Chapra charge has been the worst offender. This is to be explained by the fact that on two large tanks and a hand the work of finishing is going forward on a large scale. I have ordered Mr. Grimley to reduce the number to the smallest possible limits. The rates of wages have been calculated on barley from 12 to 14 seers. There has been a steady increase in numbers owing to the rabi harvest being over.

(c) The outturn of work was small in Siwan and West Gopalganj. Mr. Lyall explains that a large number of persons paid irrespective of task were included among the task-workers. I look to him to take steps to prevent the mistake recurring. Mr. Lister will also be called on to explain.

(d) The cost has been largest in Siwan. I do not press for decrease in cost, as accuracy is more essential. Very much depends on measurements being made correctly. The number of carriers may perhaps be decreased on some of the tanks in Siwan.

(e) The statement required by your Circular No. 31 (Famine), dated 16th February 1897, is herewith submitted.

(f) Your circular letter No. 971 F.G., dated the 14th April 1897.—The pit system is gradually being introduced throughout the district. My personal experience of it, which has been confirmed by the opinion of such of the Charge Superintendents as have reported, is that the system is easy to organize, works smoothly when well started, and makes checking of measurements more possible. It is difficult always to find an additional two carriers for each squad at the moment they are required, and this part of the system is not very exactly carried out. The covering letter from the Government of Bengal, in the Public Works Department, gives a sufficient latitude to the officers in charge. In practice, the number of carriers allowed is found to be ample.

(g) The task of 200 cubic feet, laid down in your Circular No. 20 of 1897, is being universally adopted. The result has been in some cases the desertion of the whole body of relief workers. They will no doubt shortly return, but it is an indication that in such areas distress is not very severe. In two cases I have allowed a task of 150 cubic feet where the soil is exceptionally hard.

14. SECTION 24 (3).—*Private Agency Works*.—*Gopalganj Subdivision*.—(1) *Hatua Raj*.—New works were open during the week ending the 1st May, employing a daily average of 3,392 male units on task-work and 595 on work irrespective of task. The cost per thousand cubic feet is Rs. 4-2-7, which is excessive as an average. The work done per male unit is also far too low. The Manager has submitted no explanation, and I am pointing out to him that a relief work fails in its object if a full task is not exacted.

(2) *Raj Kishore Narayan* at *Baikunthpore* has been employing some three or four hundred persons on tanks and wells which he is excavating with money advanced under the Land Improvement Loans Act. The work is not very efficiently done, but famine wages are paid, and the relief given makes the starting of Government relief work in the neighbourhood unnecessary.

Siwan Subdivision.—Nine tanks are now being excavated with money advanced under the Loans Act. Mr. Lyall estimates that 2,000 people are employed, and states that the work thus provided has been of great assistance in alleviating distress.

(3) In the *Sadar* subdivision two bands and a tank are under construction on similar terms and have also been of material assistance.

15. SECTION 21 (4).—*Poor-houses*.—(a) There were two Government poor-houses open as before. The *Siwan* poor-house is nearly empty, but numbers are sure to increase shortly.

(b) The average number of persons relieved in the four Hatwa poor-houses during the last week under report was 210, as against 283 at the close of the previous period. I understand the decrease is due to the fact that some persons have been released and brought on to gratuitous relief and others have been drafted to relief works.

(c) There are now 27 inmates in the Manjha poor-house, as against 23 at the end of the period last reported on.

16. SECTION 24 (5).—There is no regular organization for relief of artisans except on a very small scale in Mirzapur and Amnour. A return from Siwan shows 89 persons in receipt of gratuitous relief who are employed on tasks. The number so employed in the Sadar subdivision is large, but no return is forthcoming. I am putting a stop to the system, as I consider that the advantages do not compensate for the loss of time and money involved and the opportunities for fraud given. If relief of artisans becomes necessary, it will be separately organized.

17. SECTION 24 (6).—The daily average number of men, women and children in receipt of gratuitous relief for the week ending 1st May was 7,676, 27,428 and 15,745, respectively, and total 50,849, as against 5,935, 20,407 and 10,113, respectively, and total 36,455. At the end of the period last reported on I attribute the increase, as stated in my paragraph 4, chiefly to the fact that the people have become accustomed to this means of relief, and now take it readily for the most part. It is also partly due to the temporary alleviation of the rabi harvest having ceased and the ever widening effect of the continued strain of high prices.

18. SECTION 24 (7).—There are no kitchens open, but I am arranging for cooked food to be supplied to children on the larger relief works, who are now treated as dependants. The number in some cases have grown suspiciously large.

19. SECTION 24 (8).—*Advances.*—(a) In the Chapra subdivision Rs. 500 and in the Siwan subdivision Rs. 932 have been advanced under the Land Improvement Loans Act new rules for tanks and pukka wells. Circle Officers are made definitely responsible for seeing that the money is spent on the purposes for which the advances are made, and that the famine rates of wage are followed.

(b) Under the Agriculturists Loans Act, Rs. 4,982 were advanced in Siwan and Rs. 10,179-8 in Gopalganj. The advances are usually made on the joint security of a body of villagers. The most distressed villages are selected for this form of relief. The senior kanungo is now employed in the Sadar subdivision in making enquiries into applications from distressed areas.

(c) The Hatwa Raj is also making rice and money advance to tenants. Up to the 15th April 1,375 maunds of rice had been advanced. The villagers are not coming forward very readily, and it is apparent that the mahajans have not yet withdrawn their aid. They are not likely to do so unless at the last extremity.

20. SECTION 24 (9).—The prescribed statement is submitted.

21. SECTION 24 (10).—I have nothing further to add.

22. SECTION 24 (11).—I have noted no change in the tracts outside the affected area. But the excellent prospects of the cheena and the timely efforts of the raiyats to take advantage of every opportunity confirm me in my opinion that any very widespread increase of distress is not to be anticipated. There is no sign of loss of spirit among the people.

23. SECTION 27 (iii).—There were 28 irrigation works under Civil Agency in progress during the fortnight. The number of persons employed on them was 109,111. The amount of loan advanced was Rs. 2,178.

24. *Your Famine Circular No. 1 of 1897.*—The statement furnished is based on such figures as are available.

25. *Your Famine Circular No. 3 of 1897.*—The jail statistics are forwarded herewith. The statement of money-orders shows an amount much less than this month last year. I am unable to explain the decrease.

26. *Your letter No. 290F.—G., dated 7th 8th February 1897.*—The total numbers on (1) relief works and (2) in receipt of gratuitous relief on the last day of the period under report was 24,674 and 48,856, respectively. These figures are exclusive of the Hatwa and other private agency works.

27. *Indian Famine Charitable Relief Fund.*—Chairmen of Committees have now been arranged for throughout the district. There are only a few census circles left out. The Chairmen have been provided with funds and with all necessary instructions, and in some instances have already taken charge of the respectable poor from the Circle Officers. Regular nominal lists of this class of recipients of gratuitous relief are being prepared, and they will all be made over to the fund as soon as the organization is complete. The majority of the Chairmen, however, appear to be of the opinion that the Government system of relief is sufficient for the present and do not evince much keenness to take up the work. The Chapra Town Committee are doing good service.

M. Buskin,
Manager, Raj Hatra.

No. 482F., dated Motihari, the 7th May 1897.

From—D. J. MACPHERSON, Esq., Collector of Champaran,
To—The Commissioner of the Patna Division.

I HAVE the honour to submit my report, under section 24 of the Famine Code, for the second-half of April 1897. As instructed by you, it covers a period of three weeks, the figures dealt with relating to the weeks ending on Saturdays, the 17th and 24th April and 1st of May.

2. The report was due on the 2nd of May; but as the period it covers ended only on the preceding day, and returns have to come from a large number of works situated at a great distance, you recognised that there would be some delay in its submission. The figures for professional agency works were not received until the evening of the 4th instant. Some delay has also occurred owing to the relief work figures having to be put into the new form of Statement D, and these had to be compiled at head-quarters from the old form 19, as there was no time to get the new forms circulated. There was a serious conflagration at Bagaha on the 25th April, in which the Charge Superintendent's office was burnt down at the moment the weekly returns were being compiled, but notwithstanding this he managed to send in his figures without much delay.

3. *Section 24 (1) (a)—Area affected.*—As regards the total area affected, I have no change to report. It extends to 2,593 square miles with an estimated population of 1,554,000. The proportion of this classed as only slightly affected has, however, contracted with the cessation of the employment afforded by the *rabi* harvest and the prolongation of famine conditions, and may be put down now as only about 493 square miles with an estimated population of 370,000. The area seriously affected becomes therefore 2,100 square miles with a population of 1,184,000.

4. The total number of persons on relief of all kinds on the last day of the period under review (1st May) was 139,279, of whom 89,728 were men, 57,400 women, and 42,151 children. This amounts to 8.96 per cent. of the population affected (1,554,000). Of the total number 72,027 or 51.7 per cent. were relief workers, and 67,252 or 48.3 per cent. were gratuitously relieved in poor-houses, kitchens, at their homes, or as dependants. Of the relief workers 27,248 were men, 28,850 women and 15,929 children. Of those gratuitously relieved 12,480 were men, 28,550 women and 26,222 children. The men therefore formed 37.8 per cent. of the relief workers, but only 18.5 per cent. of those gratuitously relieved. The total numbers on relief show a slight decrease of 2,669 as compared with the close of the period last reported on (April 10th), but the decrease in relief workers has been 8,613, while those gratuitously relieved in all ways has increased by 5,944. The figures given above agree with those published in the last issue of the *Gazette*, but they were not all for the 1st of May, and differ therefore somewhat from those shown in Form 10 annexed.

5. *Section 24 (1) (b)—Relief Circles.*—I have no changes to report in regard to the final arrangement of charges as shown in the statement in paragraph 4 of my last report, except to mention that I have still to keep Maulvi Syed Abdul Salek, Officiating Deputy Collector, on Land Acquisition work. He is now, however, urgently required to assist the Charge Superintendent of Bagaha, and I hope he will be able to join there this week. Two of the Charge Superintendents, Messrs. Coupland and Foster, have been ill, but they have been able to look after their office work, and are now going about again. As I write this, I hear of Mr. Wood being now ill.

6. *Section 24 (2) (a)—General state of the affected tracts, crop prospects, and rainfall.*—The spring crops have now been gathered, and threshing is also nearly finished. On the whole I should say that about 80 per cent. of the normal area was sown this year, and that the outturn on that area, taking it all round, was about 12 annas, or three-fourths of an average crop. The harvest generally would thus be about three-fifths of an average. This estimate relates to food-crops only.

7. During the three weeks rain fell on one day, the 20th of April. The recorded fall was 1.32 inch at Motihari, 1.04 at Barharwa, .55 at Bettiah, and .28 at Bagaha. The rain, though the accompaniment of a thunderstorm, was general throughout the district, but light in the west of it. There was some hail in places, and the indigo crop suffered a little damage; but otherwise the rain did a great deal of good to the *china* and *kodai* millets, and facilitated the preparation of lands for the *bhadoi* and *aghani* crops. The question of the supply of seed for these is now of pressing importance. The opium weighments are over with very disappointing results. Sugarcane, which is grown only in a limited tract in this district, is doing well.

8. *Section 24 (2) (b)—Food-stocks and traffic in food-grains.*—Forms 8 and 9 annexed to this report show that during the three weeks ending on the 1st May 42,216 maunds of food-grain were imported by rail into the district and 671 maunds exported. This gives a weekly import of 14,072 maunds and export 224 maunds against 35,927 and 123 maunds respectively during each week of the preceding fortnight. There has thus been a marked falling off in

the rate of importation, especially to Bettiah, which took only 14,115 maunds during the whole three weeks; Motihari took 17,852 maunds. The imports were almost entirely rice and paddy, and the great bulk came from Calcutta (Howrah), whence 26,657 maunds of rice and 12,169 maunds of paddy were imported. The net balance of imports of food-grain by rail since the 1st October 1896 amounts now to 1,71,516 maunds.

9. The returns received from the traffic registering stations on the Nepal frontier show a total importation of food-grain into the district during the whole month of April of 12,577 maunds and no exports to Nepal. There has been a great falling off in this traffic during the latter part of the month, and the smuggling of rice and paddy from Nepal is reported to have practically ceased.

10. The lessees of ferries on the Gandak river have returned 604 maunds of food-grain imported and 1,737 exported during the month of April. Half these exports were paddy, probably intended as seed for Saran district.

11. Stocks continue to hold out, but the Subdivisional Officer of Bettiah reports that in some of the northern bazars he had been visiting he found very little except Burma rice and *masuri* (lentils). These bazars are apparently dependant almost entirely on imported grain.

12. *Section 24 (2) (c)—Prices.*—I annex a statement showing the prices of the principal food-grains at Motihari and Bettiah. The price of common rice has risen at Motihari from 8 seers 9 chitaks to 8 seers 5 chitaks per rupee: at Bettiah it is stationary at 9 seers. The price of maize is the same as before. The prices of *rabi* grains have, on the whole, risen, but they have varied irregularly. The average price of common rice in the bazars of Hardih thana is between $7\frac{1}{2}$ and $7\frac{3}{4}$ seers, which shows a distinct rise. In Bagaha also there has been some rise, namely, from 9 to $8\frac{3}{4}$ seers. There Burma and ordinary rice are selling at the same price, but elsewhere the former is generally about $\frac{1}{2}$ a seer cheaper. It is significant that prices are not, on the whole, lower than they were a month ago in spite of the heavy importation of rice and of *rabi* grain being now generally in the market. The price at Motihari of the grains reported in the annexure is, taking them all round, Rs. 3-10-6 per rupee against an average for the last five years of Re. 1-15-3, thus showing an increase of 87 per cent. Away from the railway, the divergence is considerably greater, as this is in ordinary years an exporting district, whereas this year grain has to be imported to almost every part of it, and especially to the more remote parts.

13. *Section 24 (2) (d)—Emigration and immigration of famished people.*—Nothing of this kind is observable at present.

14. *Section 24 (2) (e)—Condition of cattle.*—The cattle continue in very fair condition, as the pasture has been improved by the showers that have fallen during the spring. There are complaints, however, of their having in places to be taken to some distance for water, but they have not to go very far.

15. *Section 24 (2) (f)—Public Health.*—I gave a statement of the mortality thana by thana in the month of March in my last report and discussed its main features. Special enquiries that have been made have failed to detect any mortality due to inadequacy of the ordinary relief arrangements. The great bulk of the deaths, of which the cause is not specified in the returns, occurred among infants under one year of age. I have just received a statement showing the deaths recorded in the month of April. The death-rate of the district was only 2.15 per mille against 2.34, the average of the last five years in that month, and only in Motihari, Madhuban and Adapur thanas is the rate higher than the average, and then not largely so. The thana showing the highest death-rate in April is Hardih, but even here it is only 2.72 against an average of 3.33 per thousand. I am unable to discuss the matter further, as the figures showing the deaths from each cause have not been received. There has been a good deal more small-pox about than usual, but still only 56 deaths were reported as due to this cause in March. No deaths from starvation have been reported.

16. A statement is annexed showing the result of observations on the health and weight of prisoners admitted into the Motihari Jail during the three weeks ending on 1st May as compared with the corresponding period of last year. It shows a marked deterioration in health.

17. *Section 24 (2) (g)—Crime.*—The number of burglaries, thefts and the like reported during the second-half of April, was 71 as compared with 65 in the corresponding period of 1896, and 19 of the cases were thefts of food-grain as compared with only 5. The increase in crime is small compared with what it has been during the last few months. Conflagrations are numerous, but no special information has been received showing them to be of an incendiary nature, though no doubt a good many are in a year like this.

18. *Section 24 (3) (a)—Government Relief Works.*—Statements D (Form 5) and E (Form 7) enclosed gave particulars of relief works open during the weeks, ending on the 17th and 24th April and 1st May. The number of works open at the close of the period was 81, an increase of 11 during that time. There were 54 civil agency works, of which 42 were tanks, 7 roads, 3 embankments, and 2 irrigation channels. Under the Public Works Department were 27 works, namely, 3 tanks, 18 roads, 1 embankment, and 5 canals (really five sections of two large canals). There was thus an addition of 3 to the number of civil agency works and of 8 to that of professional works. The Civil Department are now resuming the excavation of tanks that had to be stopped when the water level for the time being was reached. Under the Public Works officers two important canals have been begun during the period under review, namely, the Tribeni and Dhaka canals.

19. The subjoined statement shows the principal figures regarding persons on relief during the three weeks under review as compared with the preceding two weeks.

Week end.ing.	Number of works open at close of fortnight	AVERAGE DAILY NUMBER OF MALE UNITS ON—				Daily outturn of work per male unit.	Cost per 1,000 cubic feet.	DAILY WAGE OR DOLE PER MALE UNIT—

The number of male units employed on relief works remained practically stationary during the three weeks ending on the 10th, 17th, and 24th of April, but during the week ending 1st May there has been a decrease of no less than 8,418 male units. The decrease is almost entirely in the Bagaha and Hardia thanas of the Bettiah subdivision; and although it is as marked on professional as on civil agency works, it is to be attributed to the changes consequent on the closing of a number of works in North Bettiah in order to transfer as much of the labour as possible on the Tribeni canal, which work was practically not started until the week ending on the 1st May. A marked increase will be observed in the number on daily wages irrespective of task in the period under review. This is chiefly due to the numbers paid for Sundays being now shown under this head. There has, moreover, been an increase in the works requiring the employment of considerable numbers in dressing. The increase in the number gratuitously relieved will be commented on later on.

20. There has been an improvement in the outturn of work both on civil agency and professional works. The average of the preceding fortnight was 27 cubic feet per male unit on civil agency works and 28 on professional works, but during the three weeks now reported on the average has been 29 and 36, respectively. Indeed, in the last week the outturn on professional agency works has increased to 43 cubic feet. This is no doubt due in part to the introduction of piece-work on the Tribeni canal, but it should be noted that only 3 of the 27 professional works are tanks, whereas no less than 42 out of the 51 civil works belong to this category, and are therefore characterised by long leads and lifts. The cost per 1,000 cubic feet has decreased more than in proportion to the increased outturn. This is because payments for Sunday, when no work is done, are excluded from the calculation from the beginning of the period dealt with in this report. The Sunday figures had been eliminated from the calculation of outturn of work at an earlier stage under instructions received from you. The cost per 1,000 cubic feet averaged Rs. 3-4-7 on civil agency works and Rs. 2-11-6 on professional works during the three weeks covered by this report as compared with Rs. 3-13-8 and Rs. 3-14-2 respectively in the preceding fortnight. The average wage per male unit has been 1½ anna on task work and 1¾ anna on daily wages irrespective of task. The higher rate on the latter is due to the employment of special gangs.

21. Allusion has been made above to the introduction of piece-work on the Tribeni canal. This canal skirts the Someswar range of hills, and runs through a tract of country, which becomes extremely unhealthy in the rains. It is a work, however, which will be of the greatest possible utility in protecting from future famine the tract which suffers from drought more than any other in the district. It is an excellent means of employing famine labour, but the country it passes through is for the most part thinly populated. In view of its unhealthiness, it is extremely desirable to push on the work as fast as possible before the rains, and the only way of inducing labour to move to a distance from works conducted on the task-system was to offer piece-work. The great difficulty, moreover, of securing a competent staff to serve in that remote and unhealthy locality rendered it necessary to introduce a system much more easily supervised than task-work. A rate of Rs. 1-14 per 1,000 cubic feet was offered at first, but it was found that the people could not earn enough to live on at that rate, and they speedily deserted the work for others, though situated at a great distance. The rate had to be raised to Rs. 2-8, which is only 25 per cent. above what has to be given to professional labourers for road work in that locality in ordinary years and at a less trying season. Prices are very high, as there are no bazars near the work, and all grain has to be imported. It is too early yet to judge whether this rate will suffice.

22. In your letter No. 971F.G.—Cir., dated the 13th April, you have asked me to mention in this report how the pit system works. Those whose reports I have received are unanimous in saying it has worked satisfactorily, and is much preferable to any other way of exacting task-work. Inconvenience is felt when members of a gang, especially the diggers, absent themselves, and on roads and other works with short leads and lifts it is difficult to arrange for the employment of all who are unfit to dig. But these difficulties would arise equally where the task is fixed at so much per head to be dug and carried, as this system likewise postulates, and is indeed expressly based, on a stated proportion of carriers to diggers. Under any system some latitude requires to be allowed in regulating that proportion according to circumstances. The great trouble is the extreme difficulty of obtaining an adequate and properly qualified staff. The men available are quite as incompetent as they are prone to dishonesty. But this difficulty would apply equally to all modes of

existing task-work, and piece-work seems the only way of lessening it. The system of making the gang working in one pit the unit for task and payment is a great improvement on that which was at first tried on professional agency works of making the unit a gang of about 60 persons without regard to the pits they were distributed over. It has greatly diminished complaints of inadequate payment. When the task is fixed according to what the digger can excavate, the labourers can understand how much work they have to do to entitle them to the full wage, and this is a useful check on the subordinate staff.

23. The scale of wages has not been changed as yet, and will be found in the task and wages table annexed to this report. They represent the grain equivalent of the ration at $9\frac{1}{2}$ seers per rupee under section 104 of the Code. The scale will now have to be changed, as *rabi* grains are now as much in the market as they are ever likely to be, though the prices fluctuate considerably, and in most places imported rice is the principal grain offered for sale, the *rabi* being mostly kept for home consumption. I have only this week received a statement of prices from different parts of the district for the purpose of considering what the wage should be.

24. Of the 81 works open on the 1st May, no less than 45 were tanks, 2 large canals and 2 smaller channels, all designed to improve the supply of water for irrigation. The tanks will also be useful for water for cattle in the dry season.

25. *Section 24 (3) (b)—Private relief works.*—I annex a statement showing particulars of two small tanks that are being excavated at the expense of the Bettiah Raj. A daily average of only 150 labourers have been employed on these during the three weeks. A mahajan of Madhubani in North Dhaka Charge, Babu Isa Rai, has had a tank work going for some time with about 200 coolies on it. He pays them at the rate of Rs. 2-3 per 1,000 cubic feet. In the Madhubani outpost of Bagaha thana, Mr. P. Broucke has begun cleaning out a small tank, but no particulars are reported.

26. *Section 24 (4)—Poor-houses.*—A statement is annexed giving particulars of the number of inmates in the various poor-houses and the cost of dieting them. Details of the quantity and value of articles of food consumed have not been given by the Charge Superintendent of Bagaha for the weeks ending 17th and 24th April, although several times asked for them. A supplementary statement is added giving the particulars of the Patahi poor-house for the three preceding weeks which were not received for last reports. There are six poor-houses, one at the head-quarters of each charge, except of Adapur and Kessaria, where they are not needed. The daily average number of inmates throughout the period dealt with in this report was 242 men, 203 women, and 140 children, making a total of 585. The average dolo per adult unit cost 1 anna 8 pies, the high rate as compared with the cost of the ration being explained by the fact that these poor-houses are to all intents and purposes hospitals. The rate was specially high in Makhwa. This is due to expensive dieting of sick people, of whom there is an unusually large proportion in that poor-house. None of the Charge Superintendents gives any information as to the work the inmates do; but as the people are all waifs and strays, and most of them sickly, it is difficult to put them to any regular work.

27. *Section 24 (5)—Employment given at homes.*—Cotton continues to be spun by women on the gratuitous relief lists in South Dhaka and Gobindganj charges, and in the former the thread is now being given to a few weavers requiring employment. In Motihari, North Dhaka and Bettiah arrangements for spinning and weaving are also being made. There are very few weavers in this district who do not work as labourers when necessary.

28. *Section 24 (6)—Gratuitous relief in the shape of grain and money dolo.*—Four statements in Form G are annexed, showing the gratuitions relief administered during each of the three weeks covered by this report and during the period as a whole. The statement includes those relieved in poor-houses and at kitchens and also dependants of relief workers. The following statement shows the average daily number relieved under each head during the three weeks under review as compared with the fortnight preceding:—

Name of gratuitous relief.	FORTNIGHT ENDING 10TH APRIL 1897.				THREE WEEKS ENDING 1ST MAY 1897.			
	Men.	Women.	Children.	Total.	Men.	Women.	Children.	Total.
1	2	3	4	5	6	7	8	9
Relieved under Chapter V ..	11,275	24,995	17,781	53,991	11,627	26,632	18,485	56,744
Dependants of workers ..	239	363	5,153	5,755	179	272	5,062	5,513
In poor-houses ..	205	142	101	448	240	203	141	584
In kitchens ..	151	134	246	531	161	180	271	612
Wanderers—others ..	81	92	81	254	20	54	29	103
Total ..	11,919	25,630	23,312	60,870	12,226	27,341	24,915	64,484

It will be observed that the daily average relieved has increased from 60,870 to 64,484. Charge Superintendents have not, as a rule, explained the increase which is observable everywhere, except in South Dhaka. In Gobindganj and in Hardih, however, the increase is small. In the two former the numbers were considerably larger than elsewhere, but the population also is large. Probably the most difficult duty of the Charge Superintendents and Circle Officers is to discriminate properly who are fit subjects for regular gratuitous relief and to revise the lists periodically for the purpose of removing those who have recovered from illness or weakness. They generally find that there are as many who have

to be put on from these causes as those who are taken off. The percentage of the affected population (1,554,000) in receipt of gratuitous relief of all kinds amounted to 4·3 during the last week of the period under review as against 3·8 three weeks before. The total cost amounted to Rs. 21,447 per week on the average during the period dealt with in this report as against Rs. 19,500 in the previous period. The average daily dole per adult unit cost 11 pies as compared with a little less than 11 pies in the preceding fortnight. In Form 7 it will be seen that the average dole for dependants (on professional agency works) was only a little over 7 pies, but this is because most are small children, for whom only a pice is allowed. Relief under Chapter V is for the most part given in grain under arrangements already reported.

29. *Section 24 (7)—Kitchens.*—There were 11 kitchens open at the close of the period under report, at which a daily average of 617 persons were relieved throughout the period, namely, 156 men, 190 women and 271 children. The weekly cost was Rs. 311-2-1, and the daily average per adult unit $1\frac{1}{2}$ annas, against $1\frac{1}{2}$ annas during the preceding fortnight.

30. *Section 24 (8)—Loans.*—Under the special rules under the Land Improvement Loans Act, Rs. 2,000 has been advanced during the period dealt with in this report for constructing a bund and a pyne in Bettiah. In South Dhaka Charge sums aggregating Rs. 137 have been given for clearing tanks and making pucca wells and Rs. 723 as loans for seed. The total loans granted during the current year amount to Rs. 2,292 under the Land Improvement Loans Act and Rs. 818 under the Agriculturists' Loans Act. No advances were made under the special rules under the former Act during the last financial year.

31. *Section 24 (9)—Finance.*—I annex the usual statement showing the expenditure incurred during the three weeks under report. The total comes to Rs. 1,83,816-7-10, or a weekly average of Rs. 61,272-2-7, against Rs. 66,192 per week in the fortnight preceding. Of the total Rs. 1,13,647-14-2 was spent on relief works, and Rs. 64,232-9-7 on gratuitous relief. The expenditure shown on establishment is not complete.

32. Monthly statements A and B (Forms 10 and 11) are annexed. A map showing the affected tracts is also enclosed in duplicate.

Columns 15 and 16.—This is for March 1897.

FORM 11.
Monthly Famine Statement B for the five weeks ending Saturday evening, the 1st May 1897.

District.	Maximum number for whom employment on relief works is estimated to be required in case of serious famine.	NUMBERS FOR WHOM RELIEF WAS PROVIDED IN LAST PROGRAMME OF RELIEF WORKS.		NUMBER FOR WHOM RELIEF CAN BE PROVIDED BY WORKS REMAINING ON PROGRAMME ON DATE OF REPORT.		EXPENDITURE SINCE 1ST APRIL 1897.	ADVANCES SINCE 1ST APRIL 1897 UP TO END OF MONTH UNDER—		Revenue sus- pended.		
		On large works.	On small works.	On large works.	On small works.		Date up to which account is made up.	On relief works.		On gratuitous relief.	Land Improvement Loans Act.
1	2	3	4	5	6	7	8	9	10	11	12
Champan	210,000 for three months.	205,560 for three months.	57,700 for three months.	About 184,000 for three months.	About 75,000 for three months.	1st May 1907	Rs. A. P. 2 03,531 1 11	Rs. A. P. 1,03,222 4 0	Rs. A. P. 2,292 0 0	Rs. A. P. 10,963 8 0	Rs. A. P. ...

Columns 3 to 6.—The figures include 75 miles of the proposed railway from Baranaga to Begha, etc., which would give employment to about 14,120 persons for three months. But there are some 37 miles more which do not appear to be entered in the programme, including the extension from Bettiah to Shikarpur, which would give employment to about 7,000 persons more for three months. It is impossible as yet to separate the figures of each financial year.
Columns 8 to 11.—The expenditure shown here is from the 28th March 1897, as the accounts are made up according to the periods dealt with in the half-monthly reports. It is impossible as yet to separate the figures of each financial year.

D. J. MACPHERSON,
Collector.

No. 81P.R., dated Muzaffarpur, the 6th May 1897.

From—L. HARE, Esq., Collector of Muzaffarpur,
To—The Commissioner of the Patna Division.

I HAVE the honour to submit the half-monthly report for the second half of April 1897. The figures in this report relate to the three weeks ending the 17th and 24th April and 1st May respectively.

2. SECTION 24 (1) (a)—*Area affected*.—There is no change since my last report in the area affected.

3. SECTION 24 (1) (b)—*Number of relief circles and officers in charge*.—Two more Charge Superintendents have joined yesterday. One Charge Superintendent who had been sanctioned left almost immediately on taking charge. There have been some minor changes in the circles since I gave a complete list of them. I am having fresh lists prepared, and will include them in a future report.

4. SECTION 24 (2) (a)—*General state of the affected tracts*.—As was anticipated, there has been some increase of the numbers both on relief works and on gratuitous relief. But the increase has been by no means so large as we anticipated. The people continue to be in good condition, and no one can complain that the tasks set are for the soil of this district anything but extremely light. By dint of incessant exertion and the careful schooling of all our officers in charge and work agents before they are sent out to independent charges, the task is being fairly well secured on the whole, and to this I attribute the small numbers when compared with the famine of 1873-74. At the same time the people are not being driven off our works, in any case where they really require to work, nor are they being reduced in condition. It may subsequently appear that owing to our reduced numbers this district will not compare favourably with other districts as regards the percentage of establishment expenditure to other expenditure. But even if this should be so, the economy in avoiding wasteful and unnecessary expenditure will be very great, and still more important is the avoidance of the grave demoralisation which must result from works not being under full and complete control when the so-called wages paid become indistinguishable from gratuitous relief. The extreme difficulty of forecasting probable requirements must also be admitted. It was necessary to be prepared for the worst; and without actual experience of the famine and its management in this district in 1873-74, it was impossible to say how far the large figures of that year were due to conditions which have not been present this year.

5. So far the experience I have now gained confirms very strongly the opinion I have long formed, that this district has made great economical progress since 1873-74—a progress due probably as much as anything else to the opening out of the district by railways which have opened out an unlimited and most profitable market for all the surplus produce of the country in the place of the former comparatively restricted and poor market.

6. SECTION 24 (2) (b)—*Crop prospects*.—The recent rainfall of April has greatly facilitated the sowings of *mung*, *chinn* and paddy and the preparation of the land for the *bhadoi* and rice crops. *Mung*, *chinn*, paddy and *alua* now in the ground are doing well. Agricultural operations are very forward this year.

7. SECTION 24 (2) (c)—*Prices*.—Two statements, (1) showing the prices ruling at the head-quarters of each subdivision and (2) those at the head-quarters of each thana and outpost in the mufassal, are appended. It will appear from statement (1) that the price of rice, both country and Burma, has risen everywhere. As regards other food-grains, the prices were stationary at Muzaffarpur. In Hajipur there was a slight fall in the prices of wheat, barley and *ruhar*, and a rise by four chitaks in the case of grain, whilst in Sitamarhi wheat and *marua* show a slight fall, and barley, gram, and Indian-corn a rise by eight chitaks, one seer and 12 chitaks respectively. This is the worst part of the year, and the prices are likely to continue rising until the rainy season has set in and the next *bhadoi* and rice crops show hopeful prospects.

8. SECTION 24 (2) (d)—*Food-stocks*.—The food-stocks continue to be sufficient for the requirements, and promises to continue to be so. Imports are steadily on the increase. The grain dealers as a body appear to be equal to the occasion. The stock of Burma rice in the godown of the Calcutta dealer, Babu Syama Charan Bose, was allowed to be depleted for two weeks.

9. SECTION 24 (2) (e)—*Imports and exports*.—Statements 8 and 9 hereto appended will show that imports during the three weeks under report amounted to 94,887 maunds and exports to 4,656 maunds, against 62,386 maunds and 1,647 maunds respectively of the two previous weeks. The net imports during the period now under report thus amounted to 90,231 maunds, against 60,739 maunds of the preceding fortnight; making allowances, however, for an additional week in the period covered by the present report, there was a decrease of about 800 maunds.

10. The following shows the quantity of rice and paddy imported from the places named in paragraph 5 of your Circular No. 15:—

			Rice.	Paddy.
Howrah	36,182	9,045
Calcutta	Nil	Nil
Sealdah	Nil	Nil
Kidderpur	Nil	Nil

11. The imports were chiefly from Howrah and Nirmali in Darbhanga as before.

12. The abstract statement (item 3), referred to in paragraph 2 of your Circular No. 1 of 1897 which the Railway authorities were requested to furnish you with, has not yet been supplied to me from your office. I am, therefore, still unable to submit the abstract and comparative statement prescribed in paragraph 5 of your Circular No. 1 above referred to, vide also this office No. 45F.R., dated 28th April 1897.

13. SECTION 24 (2) (f)—*Rainfall*.—The rainfall during the period under report was as under :—

	In.
Muzaffarpur	0 08
Paru	1 20
Hajipur	0 85
Chitmarā	0 60
Sitamarhi	0 24
Shiuhar	0 96
Pupri	1 25

The rain was fairly general, but varied considerably in amount. There were showers in the Hajipur and Sitamarhi subdivisions, but in the Sadar subdivision there was a little or no rain in the south eastern portion. The heaviest fall is reported from the Kurbhari Factory, near the Bhagwanpur Railway station, where more than two inches of rain are said to have fallen.

14. The rain has done much good to the standing crops, and facilitated the preparation of land for the *bladoi* and paddy crops.

15. SECTION 24 (2) (g)—*Public health*.—The public health continues to be exceptionally good. Statement (1) showing the health of the district prescribed in sections 168 and 174 of the Code, and (2) showing the health of the jail population required in paragraph 5 of your Circular No. 3 of 1897, are appended.

16. SECTION 24 (2) (h)—*Emigration and immigration of famished people*.—There was no emigration or immigration of famished people.

17. SECTION 24 (2) (i)—*Condition of cattle*.—The condition of cattle is exceptionally good.

18. SECTION 24 (3) (a)—*Relief works*.—The following will show the number of relief works open at the close of the period under report, viz., on Saturday, the 1st May :—

UNDER CIVIL AGENCY.

Sadar Subdivision.

Sadar thana	10
Paru charge	4
Muzaffarpur	3
Katra	13
				— 30

Sitamarhi Subdivision.

Sitamarhi charge	8
Bhuthali	1
Shiuhar	2
Belsand	6
Pupri	5
				— 22

Hajipur Subdivision.

Mahua charge	11
Lalgauj	11
				— 22

Total Civil Agency works	...	74
Public Works Department Agency works	...	20
		—
Total works under both Agencies	...	94
		—

19. The total number of workers on the 1st May 1897, the last day of the period under report, was 40,508 on Civil Agency works and 12,877 on Public Works Agency works. Of these, 30,722 and 11,257, respectively, were paid by task, and 9,786 and 1,620, respectively, by daily wage. The aggregate number of workers on both agencies on the 1st May thus amounted to 41,979 paid by task and 11,406 paid by daily wage, or 53,385 in all.

20. To compare with the previous report, the total number of Civil Agency works rose from 61 on the 10th April to 74 on the 1st May, and on the Public Works Department Agency from 17 on the former to 20 on the latter date, or from 78 to 94 in the aggregate, whilst the number of workers rose from 26,855 under Civil Agency and 12,980 under Public Works Department Agency, or 39,735 in all on 10th April, to 40,508 under Civil Agency and 12,877 under Public Works Department Agency, or 53,385 in all on the 1st May 1897. There was thus an increase of 13,650 on the 1st May as compared with the figures of the 10th April. This is the growth of a three weeks' interval. The growth during the two weeks ending 10th April was 12,724. It will be seen that the number of workers on Public Works Department Agency works on the 1st May was nearly the same as on the 10th April, or, strictly speaking, less by three, in spite of an increase of three in the number of works open. The moral of this is that the demand for work is more widespread, but has not increased in intensity in the neighbourhood of the Public Works Department works, and

21. The following figures show the average amount of task done per male unit per diem during the three weeks under report and the two preceding weeks :—

Weeks ending—	TASK DONE PER MALE UNIT.	
	Civil Agency	Public Works Department Agency.
1	2	3
3rd April 1897	51.11	40.00
10th " "	56.51	50.79
17th " "	54.47	46.00
24th " "	57.37	58.00
1st May "	64.97	54.00

22. With certain fluctuations there has been an improvement in the general outturn of works. The fluctuations are due to variations in the nature of the work, as it changes more or less from day to day.

23. Expenditure on relief works during the three weeks under report under Civil Agency amounted to Rs. 35,768-9-4 on task work and Rs. 15,506-3-10 on daily wage, or Rs. 51,274-13-2 in all, and under Public Works Department Agency Rs. 19,508-5-3 on task work and Rs. 4,618-8-3 on daily wage, or Rs. 24,126-13-3 in all. The gross expenditure on relief works under both agencies thus aggregated Rs. 75,401-10-8, as compared with Rs. 35,693-6-1 of the preceding fortnight.

24. Statements 5 [section 26 (i)] and 7 [section 26 (ii)] prepared in the manner laid down in your Circular No. 19 showing figures subdivision by subdivision and charge by charge, and the statement of maximum and minimum wages prescribed in Government Circular No. 1K, dated 6th January 1897, are hereto appended.

25. SECTION 24 (3) (b) —*Private relief works.*—The private relief work at Pariharpur, in the Sitamarhi subdivision, continues to be maintained by the Darbhanga Raj. A statement hereto appended shows the particulars from the 11th to the 28th April 1897. The number of workers on the 28th April was 2,631, against 3,042 on the 10th idem, whilst the total number for the period covered by the statement amounted to 29,794, against 32,919 in the fortnight ending the 10th April.

26. SECTION 24 (4) (a).—*Poor-houses.*—The number of poor-houses open during the three weeks under report was six as before. A statement showing particulars regarding these is appended.

27. The total number of inmates on the 1st May was 223 against 253 on the 10th April 1897.

28. SECTION 24 (4) (b).—*Private poor-houses.*—The Darbhanga Raj poor-house at Pariharpur, in the Sitamarhi subdivision, continues to be maintained. A statement hereto appended shows particulars from the 11th to the 28th April 1897. The inmates in this institution on the 28th April were 325, against 185 on the 10th April.

29. SECTION 24 (5).—*Organization for employment of artisans, &c.*—No special arrangements for employment of art zans has been made.

30. SECTION 24 (6).—*Gratuitous relief.*—Grain doles are distributed through Circle Officers, whilst on relief works money doles are given.

A statement in Form 6 prepared in the manner laid down in your Circular No. 19, paragraph 5, is hereto appended.

31. The average weekly number of recipients in the last of the three weeks under report was 54,097 under Civil Agency and 441 under Public Works Department agency, or 54,538 in all, as compared with 47,874 and 560 respectively, or 48,434 in all in the week ending the 10th April 1897.

The aggregate number receiving gratuitous relief reduced to adult units to the term of one day during the period under report amounted to 1,041,579, against 508,235 in the preceding fortnight as noted in the margin.

Period of present report.			
Week ending—			
17th April 1897	...	311,052	
24th " "	...	348,761	
1st May "	...	381,766	
Total	...	1,041,579	

Preceding fortnight.			
Week ending—			
3rd April 1897	...	232,862	
10th " "	...	275,373	
Total	...	508,235	

32. Gratuitous relief was also distributed by the Darbhanga Raj at Pariharpur. A statement showing statistics for the weeks ending the 17th and 24th April is hereto appended. The total number relieved during the two weeks were 6,631.

33. SECTION 24 (7).—*Kitchens.*—There were 26 kitchens open during the week ending 1st May 1897. These were all under the Civil Agency. The total number relieved in the kitchens during the three

weeks under report was as shown below :—

Week ending—	Men.	Women.	Children.	Total.
17th April 1897	224	434	1,929	2,587
24th " "	270	747	3,027	4,044
1st May "	399	956	3,510	4,865
Total	893	2,137	8,466	11,496

34. A statement showing particulars subdivision by subdivision and charge by charge is appended. It will be seen that by far the larger number receiving this relief are children, and, it might be added, female children. The neglect of the little girls is in some places very marked, and it is only by giving them cooked food under the Circle Officer's supervision that it can be secured that relief really reaches them. The rapid improvement in the condition of these children under this system is very gratifying.

35. SECTION 24 (8).—*Loans*.—The following sums were advanced during the period under report:—

	Rs.
Under Land Improvement Loans Act ...	1,617
„ Agriculturists' Loans Act ...	350

36. The particulars required by paragraph 4 of Government order No. 841Agri. (Fam.), dated 25th March 1897, regarding advances under the modified rules for village works are given below—

	Rs.
(a) Amount advanced during the period under report ...	1,617
Ditto ditto month of April ...	2,067
(b) Total amount advanced during the current financial year including (a) ...	2,067
(c) Total amount advanced during the preceding financial year ...	3,100*

37. SECTION 24 (9).—*Financial statement*.—I append a financial statement as far as I have been able to complete it.

The following are also appended—

- (a) Statement in Form 10.
- (b) Ditto ditto 11.
- (c) A map of the district in duplicate.

* In addition to this, a sum of Rs. 1,020 was advanced in 1896-97 under the ordinary rules previous to the issue of the modified rules. These advances were principally in view of the famine; and if Government approves, the bonds can be modified so as to bring these loans under the special rules.

Statement of Food-grains ruling at each of the Subdivisional Head quarters in the district.

L. HARE,
Collector.

MUZAFFARPUR COLLECTORATE,
The May 1897.

No. A, dated Darbhanga, the 10th May 1897.

From—R. W. CARLYLE, Esq., Collector of Darbhanga,
To—The Commissioner of the Patna Division.

I HAVE the honour to submit herewith my 12th half-monthly report for three weeks ending 17th and 24th April and 1st May.

2(1)*a*. The area affected is the same as stated in my last report, namely, 2,940 square miles, with a population of approximately 2,270,000. It includes a portion of the Samastipur thana, in which test works are going on.

3(1)*b*. The number of circles is 87, with 84 circle officers. Above the circle officers there are 11 Charge Superintendents. Darbhanga, Madhubani, and Benepatty thanas have each now two Charge Superintendents; Khajauli, Phulparas, Baherah, Singhia, and Wairnagar thanas have each one Charge Superintendent. The Subdivisional Officer of Samastipur is in direct charge of the affected portions of the Samastipur thana, as the number of test workers is very small.

4(2)*a*. There is no great change to report in the general state of the affected tracts. The numbers increased very much after the *rabi* was harvested, but they have now for some time been almost stationary. In a few cases people of the higher castes have been driven on to our works, including even a small number of Brahman women; but on the whole, as before, the relief workers continue to belong almost entirely to the labouring classes.

5(2)*b*. Crop prospects continue fair. Of course there are comparatively few food-crops in the ground. *Mung*, *chana*, *abur*, and paddy in some of the low chars are the chief crops.

6(2)*c and d*. As regards food stocks, I have no reason to doubt they are still considerable. Even in Baherah thana, where it is difficult to buy food-grains except in very small quantities, I believe the stocks are very considerable. In Baherah they are almost entirely in the hands of the zamindars, who will not part with large quantities, as they are holding out in hopes of a still further rise in price.

7(2)*i and d*. Imports are very largely increasing. The appended statistics of railway exports and imports show an importation of 1,86,346 maunds of food-grains, against an export of only 4,974 maunds, or a net import of 1,81,372 maunds, nearly 6,500 tons.

8(2)*c and d*. Of the food-grains imported, 63,139 maunds came from Howrah, none from Calcutta, Kidderpore, or Sealdah.

9(2)*f*. I give the usual rainfall return. It will be seen the rainfall was very partial. It varied from 0.05 at Benepur to 3.3 at Mangulgarh.

10(2)*g*. Public health continues very good. The death-rate for April was only 22.5 per mille per annum, against an average of ... for the last five years.

11(2)*h*. There has been no emigration and immigration of famished people.

12(2)*j*. The condition of cattle is generally fairly good, but cattle-disease has broken out in the north-west of this thana, and very possibly indicates that the state of the cattle is worse than I supposed. I have telegraphed for an officer who can enquire into and, if possible, do something to check the spread of the disease. He has just reported himself.

13(3)*a*. One hundred and eight Civil Agency works are now open, including 4 test works. There are 44 Public Works Department works.

14(3)*b*. I append statements showing the numbers paid by both works, daily wages, &c.

15(3)*c*. The rates of wages have not been altered. They are as before:—

Maximum.				As. P.
Men	1 9
Women	1 3
Big children	0 9
Small children	0 6
Minimum.				
Men	1 0
Women	1 0
Big children	0 6
Small children	0 3
Penal.				
Men	0 9
Women	0 9
Big children	0 6
Small children	0 3

16(3)*d*. I append statements showing the numbers employed and the earthwork measured and paid for by the Darbhanga Raj. As I have mentioned in previous reports, work is done on the piece-work system in the Raj.

17(3)*e*. I have been asked to give a description of the pit-gang system as worked in this district. I accordingly take the case of a tank. It is divided into 20 feet squares, separated from one another by 5 feet road. In each pit there are either 2 or 4 diggers. If there are

2 diggers, each man digs half the pit one foot deep. If there are 4 diggers, each man digs one-quarter of the pit two feet deep. As soon as all the pits in the tank have been dug to a uniform depth of 2 feet, the roads between the pits, which are now 2 feet above the level of the tank, are cut down to a level with the rest of the tank. The tank is cut up into roadways as follows:—

It will be seen that it is very easy to fix a task in removing these roadways. Each inner side of the pit is 20 feet, so that there are four lines of roadway $20 \times 5 \times 2 = 200$ cubic feet each (*vide* sketch above within the dotted lines). This leaves the corners each $5 \times 5 \times 2 = 50$, or four of the corners come to 200 cubic feet.

18(3)*c*. No new pits are dug till the whole of the roadways are cleared away, but while this is being done the part of the tank already levelled is marked out afresh, so that work can recommence as soon as the whole of it has been levelled.

19(3)*a*. The great advantages of this system are that swindling over the measurement is practically impossible. Anyone going to the tank knows the work was levelled before the pits were marked out, and that the depth below the roadways indicate the amount excavated. As the pits are uniform in size, all that is necessary to check the measurements is to take the depth, and even this is scarcely necessary after a little practice in judging the depth.

19(3)*e*. I have been describing what I consider by far the best system. In some cases the pits are dug down 3 feet and the roadways are then cut down 2 feet, only 1 foot of roadway being left. The advantage of this is supposed to be that the work does not need again to be marked out. As a matter of fact this is no advantage. Marking out a tank does not take long, and is very easy to do. If the pits are dug down continuously the banks slope in, as the coolies do not cut the sides quite perpendicularly. The great disadvantage, however, is that one cannot be sure of the measurements, as one does not know whether the roadways were cut down exactly 2 feet. If they were cut down less, the pit measurement will be in excess of the truth; *e.g.*, if the roadways were only cut down 1 foot 6 inches, a pit really only excavated 6 inches will be 2 feet below the roadway, and, therefore, apparently excavated 1 foot after the roadways were cut down.

20(3)*e*. The diggers and carriers employed in digging a pit form a pit-gang, and fines are imposed on it as a whole (one of my Charge Superintendents has on some works brought down the fine to the individual digger and his carriers, but this is exceptional). These gangs are as far as possible not altered. It has been asked how this can be managed, as the number of carriers must change the lead and lift. There are various ways of getting over the difficulty. In the case of one tank, for instance, gangs always work at a uniform distance from the bank of the tank, so the lead is constant—

e.g., in the above sketch the dots show where the pit gangs are working when they com-

menaced. As soon as they have finished they take up the positions marked by the dashes, A gang in line A continuing to work in that line, and so on.

21(3)c. It has not been found necessary to increase the number of carriers for a difference of lift of less than 6 feet; and it takes a considerable time before a tank is excavated 6 feet.

22(3)c. It is in practice hardly ever necessary to diminish the number of a pit-gang, but if it does prove necessary to increase it, this can generally be managed by the gang. It gets a few more children or some women who had hitherto been left at home, and in this way the difficulty is overcome; but as a general rule the officers in charge can so arrange that the gang need not be changed.

23(3)c. Mr. Blackwood, Assistant Magistrate, one of my Charge Superintendents, has introduced a system not sanctioned by the Famine Code, but which has worked very well. The change is as follows:—Minimum or penal payments are not made, but no gang is paid until it has completed its task, whether it takes one, two, or three days over it. In other words, he has altered task-work to piece-work with a maximum. No gang can get paid more than the maximum wage for the full task; but, on the other hand, if it does short work payment is withheld. The gang returns to work next day, and as soon as it has finished the previous day's work it is entitled to payment, and begins a fresh task.

24(3)c. This system has many merits. In the first place, no one gets paid for more than his work. If he takes a long time over it so much the worse for him, while Government does not lose. The gang, knowing that it depends entirely on itself when it gets paid, is stimulated into trying to do its task as soon as possible. It knows it is no use scraping a few inches of earth, and then squatting down till pay time, awaiting the penal wage.

25(3)c. Another very great advantage is the check it affords on cheating. If minimum and penal wages are being given, it is practically impossible for the workers to know whether they are entitled to penal or minimum wages, and the officers in charge are very prone to take advantage of this by paying the penal wage and charging Government with the minimum.

26(3)c. Perhaps the greatest advantage of all is that it ensures works everywhere being done down to the same level before payment is made. If, for instance, there are four diggers, and the pit has to go down two feet in one day, under the present system no payment is made till it has gone down that depth. Under the old system pits are dug all sorts of depth, and getting them down to one level gives opportunities for all sorts of fraud.

27(3)c. I think it would be a great advantage if the system were introduced everywhere. The Famine Code is based on the supposition that a condition of things exists which is only possible where a famine has been neglected. Of course, where that has been the case, famine workers are not able to go without pay, even for one day; but that is not the case here, and where men are so far gone it would be much better for a few days to put them on gratuitous relief till they recover strength.

28(4). There are eight poor-houses open. The numbers in them are still very small, but are gradually increasing, except in Baherah, where they are rapidly increasing since the 1st May, owing, I believe, to the difficulty experienced in some parts in getting grains except at exorbitant rates, as the zamindars are holding up in hopes of a further rise in prices.

29(5). My last returns, but I am not sure they are even now complete, show that, during the week ending 1st May, 1,063 persons were employed on cotton-spinning, 196 on basket making, 983 on rope turning, and 20 weaving cloth.

30(6). There are 87 circles with 84 circle officers, whose business it is to distribute doles either in grain or money. During the week ending 1st May 78,003 persons were receiving gratuitous relief. This includes dependents on Civil Agency and Public Works Department works, besides 238 in poor-houses. As I have said before, poor-houses will have to be much more freely used when operations are coming to a close.

31(7). No kitchens are yet open, but I am about to start one in Warianagar charge, as it is reported that the children are beginning to show signs of emaciation, and it is doubtful in many cases whether the parents are giving them the full ration. This will be ensured by their getting their food in a kitchen.

32(8). I have given loans amounting to Rs. 3,862-8 under the Land Improvement Act. I have given none under the Agriculturists' Loans Act.

33(9). I submit the usual financial statements.

34. I submit the statements prescribed by sections 26 and 27 of the Famine Code along with the map.

35. I give statements showing separately the number of people employed on works, both as regards Civil Agency and Public Works Department works. It will be seen that on Civil Agency works out of 396,550 male units 234,780 were employed on tanks. On Public Works Department works 188,276 male units out of 325,645 were so employed. I may note that the large number of tanks under the Public Works Department in Darbhanga thana accounts for the high rates there as compared with the Madhubani subdivision Public Works Department works. Some of the tanks are very large.

36. Whatever loans I have given have been almost entirely for relief works, which will add to the water-supply of the country.

37. I regret I have had to submit my returns in the old D forms. The new forms were received too late from the printing press here to permit of my using them.

38. As regards the Joynagar-Sakri Railway, I have made arrangements by which the Public Works Department can now start work on any part of the line where there are no

crops. Before the end of the week I expect to be able to hand over everything except where there are houses. I understand from Mr. Mills, the Superintendent of Famine Relief Works, that he does not attach the same importance to completing the earthwork before the rains commence as I do, and I understand he contemplates reducing the rate per 1,000 cubic feet below Re. 1-12 at first. I think this is unfortunate, as if the earthwork were finished before the rains, it might be possible to carry goods traffic over the line next cold weather.

RAJ DARBHANGA.

R. W. CARLYLE,

The 10th May 1897.

Collector.

No. 2557 F., dated Darjeeling, the 19th May 1897.

From—M. FINUCANE, Esq., Secy. to the Govt. of Bengal, Revenue Dept.,
To—The Commissioner of the Chota Nagpur Division.

I AM directed to acknowledge the receipt of your letter No. 256F., dated the 3rd May 1897, with its enclosures, being a report under sections 13 and 25 of the Famine Code, for the second half of April, and in reply to convey the following observations and orders of the Lieutenant-Governor.

2. *Paragraph 2 of your letter.—Palamau.*—In the district of Palamau prices have risen much above the rates which are the accepted index of famine. It is stated in your letter that during the second half of April rice was selling at three hats (markets) at over five but under six seers per rupee. Later information given in the telegraphic weather and crop report for the week ending 10th May is that there has been a further rise in the price of rice, two markets selling at 5 seers per rupee against one in the previous week. There has, however, been no great increase in the numbers in receipt of Government relief, the total

* Relief workers	...	3,119	number given in the telegraphic report above-men-
Otherwise relieved	...	1,958	tioned being only 5,077* against 4,705 at the
Total	...	5,077	close of March. This is attributed by the Deputy

Commissioner partly to the fact that considerable numbers of labourers find employment on private works, and partly to a strike consequent on the reduction of the rate per 1,000 cubic feet of earthwork from Rs. 2-3 to Rs. 2. It is stated in the Deputy Commissioner's half-monthly report that the *mahua* crop enabled the relief workers to hold off, and that they are coming back. But on the 24th April, the last day of the period to which the half-monthly report relates, the total number on relief works was 2,665, and the number rose only to 3,119 in the week ending 10th May. I am to request that you will enquire whether the figures reported as to the prevailing prices are correct. The Lieutenant-Governor trusts that every part of the district of Palamau is being carefully watched, and that the local officers are ready to administer immediate relief wherever needed.

Sir Alexander Mackenzie doubts whether, having regard to the prices quoted, the time has not come when Government should lay in a supply of grain for the workers on State relief work. Such prices as have now been reported would, if correct, indicate failure of stocks. I am to enquire if you are satisfied that the steps already taken will suffice to bring insufficient supplies in Palamau to supplement existing stocks till next harvest comes in to the market, or whether Government should lay in stocks for works, and, if so, how much grain should be stored, and where.

3. *Paragraph 3 of your letter.*—The Government of India have been addressed with a view to the Daltonganj section of the Dohri-Daltonganj Railway being laid out in order that, if necessary, work may be started at once to provide employment for relief workers during the rains.

4. With reference to columns 8 to 11 of Famine Statement B for the districts of Palamau, Manbhum and Hazaribagh, I am to invite your attention to the instructions given in the foot-notes to Form 11, at page 65 of the Famine Code, and to request that in future these columns may be so filled up as to show the expenditure incurred, including advances, from 1st April 1897 or the beginning of the current financial year, a foot-note being added stating the total expenditure incurred and the advances made, if any, during the previous financial year.

5. In Famine Statement E (Form 7) for the district of Manbhum, figures have been shown for each relief work for each week. What is required by Government is an abstract statement giving figures for each week for all the works taken together, as shown by the exemplar entries in Form 7, page 62 of the Famine Code.

No. 256F., dated Ranchi, the 3rd May 1897.

From—A. FORBES, Esq., c.s.i., Commissioner of the Chota Nagpur Division,
To—The Secretary to the Government of Bengal, Revenue Department (Famine).

IN continuation of this office No. 196F., dated 18th ultimo, I have the honour to submit the following report under sections 13 and 25 of the Bengal Famine Code for the districts of the Chota Nagpur Division for the two weeks ending the 17th and 24th April 1897.

PALAMAU.

2. I forward the Deputy Commissioner's report and annexed statement, together with the duplicate copy of the map required by section 27 of the Code. We are still met in this district by the phenomenon of prices of food-grains rising higher probably than in any other district in India—much above the accepted index of actual famine,—while the numbers coming to our relief works continue to be surprisingly low. The continued rise in the price of rice is shown by the following figures:—

	Week ending 13th March.	Week ending 27th March.	Week ending 10th April.	Week ending 24th April.
<i>Hats</i> at which rice was selling at over 5 but under 6 seers per rupee ...	Nil	Nil	Nil	3
<i>Hats</i> at which rice was selling at 6 and under 7 seers per rupee ...	1	2	10	31
<i>Hats</i> at which rice was selling at 7 and under 8 seers per rupee ...	12	16	45	44
<i>Hats</i> at which rice was selling at 8 and under 9 seers per rupee ...	56	58	36	14
<i>Hats</i> at which rice was selling at 9 seers and over per rupee ...	19	10	Nil	Nil.
Total number of <i>hats</i> from which returns were received ...	88	86	91	92

The average prices of other food-grains are reported by the Deputy Commissioner as follows:—

		Week ending 10th April.		Week ending 24th April.	
		Rrs.	Chs.	Rrs.	Chs.
Wheat	...	9	0	8	8½
Barley	...	13	12	12	1
Gram	...	10	12	10	3
Indian-corn	...	8	8	8	3½
Marm	...	10	8	9	5½
Mahon	...	42	5½	33	5½

But notwithstanding these high and still rising prices, the average daily male units have fallen from 3,066 and 3,274 during the weeks ending the 3rd and 10th April to 1,626 and 2,104 during the weeks ending the 17th and 24th idem. Mr. Henry accounts for this partly by the fact of a local zamindar having started some private works of improvement in pargana Tori at rates higher than those allowed at two neighbouring relief works which have consequently had to be closed, and partly to a strike among the workers in consequence of my having reduced the general rate for piece-work on roads from Rs. 2-3 to Rs. 2 per 1,000 cubic feet, as has been approved by Government in paragraph 2 of your No. 69T.R.—Fam., dated 28th instant. I still consider this measure to be a proper one, and the very fact that the workers are well enough off to keep away from the works on strike shows that it was warranted.

3. While writing this, I have received your No. 76T.R.—Fam., dated 29th ultimo, in which you inform me, with reference to paragraph 4 of my last fortnightly report (this office No. 196F., dated 18th ultimo) that, having regard to the small numbers now on relief works in Palamau, His Honour is unable to move the Government of India to commence work on the Dehri-Daltonganj Railway, and that I should instruct the Deputy Commissioner to watch the course of events closely, and to provide work wherever it is called for. I beg

to submit, however, as has been pointed out to me with considerable force by the Deputy Commissioner in a separate report, that immediately the rains set in it will be extremely difficult to find work for any large numbers. I may here note that although the average daily number on relief works during the week ending the 17th was undoubtedly very low, viz. 2,104, yet the numbers now give signs for rising again, the male units in the Deputy Commissioner's return for the 26th ultimo being 2,690; and I think that, looking at the high prices and the constricted state of the markets, we must expect a rush in another month when the people have consumed their *muhua*. We have also to take into account the considerable number of persons who are at present employed on zamindari works of improvement. They number, for 26 works from which Mr. Renny has obtained returns, 2,843 male units. From 8 works he has received no returns. On the whole we may take it that on both public and private works the actual number at present employed does not fall far short of 6,500 male units. But, as pointed out by Mr. Renny, all of the zamindari works and 12 out of the 15 public relief works shown in his last return (of 24th ultimo) are tanks or irrigation *baukhs*. I find in fact that only 635 of the above male units are at present employed on road works. The other 16ths are employed on tanks and irrigation works which will all be stopped immediately the rains break; and I fear that the Deputy Commissioner will then find very great difficulty in providing for the large number of persons, who will thus be thrown out of work. Of course it is quite possible that the mass of the people are better off than the Deputy Commissioner suspects, and that stocks are being held up (more than in other districts, in view of the difficulty of importing) until it is seen what the future has in store; and that if the rains break favourably, we shall be able at once to close all works, as was the case in 1874. The shuffling conduct of the workers certainly seems to point to this solution, though Mr. Renny anticipates a marked increase in distress very shortly, which will, he thinks, go on until the next *bhadai* crops come into the market in September. I think that our only reliable guide will be the numbers coming on to the works during the next few weeks. I will watch this carefully, and I will keep Government informed of the results.

4. During the fortnight under review 1,995 maunds of Burma rice were imported under the bounty system, giving a total of 5,046 maunds in about two and-a-half months. A beginning has also been made in imports of country rice, to the amount of 300 maunds, under the same system. Since the date of my last report the amount sanctioned for advances to assist importations has been increased by Government from Rs. 2,500 to Rs. 75,000, about one-third of which had been given out at the date of the Deputy Commissioner's report. I have also, with the approval of Government, allowed two other routes—one *via* Manatu to Daltonganj, and the other *via* Dungwar to Garwa—to be thrown open for use by importers claiming the bounty. Every thing possible to stimulate imports is thus being done.

5. The numbers of gratuitous relief are still comparatively low, the figures being 1,463 (adult units) and 1,636 for the two weeks under review, as compared with 1,120 and 1,436 during the two preceding weeks. The report showing the operations with regard to cotton-spinning, &c., had not reached the Deputy Commissioner at the time of writing his report.

MANBHUM.

6. I forward the Deputy Commissioner's report with accompanying statements and map in duplicate.

Eleven works were open during the fortnight as against ten during the previous fortnight, but the average daily male units at work fell from 3,262 and 4,005 during the two preceding weeks to 3,345 and 3,030 during the two weeks under review. The Deputy Commissioner attributes this chiefly to the intervention of Hindu holidays. Work is paid for, as in all the districts of this Division, at piece-work rates, the average rate per 1,000 cubic feet for road work having been Re. 1-11 and for tank works Rs. 2-15-7 during the fortnight under review. Considering that all, or nearly all, the soil is stiff and hard and that the two principal tanks are now at some depth, these rates are moderate. The number of adult units on gratuitous relief were 4,060 and

4,076 during the two weeks ending the 24th April, as compared with 4,205 and 4,059 during the two weeks ending the 10th idem. There has been some decrease at Pokheria and Gobindpur, owing, I think, to the opening of work on the Gobindpur-Pokheria road and the drafting there of persons fit to do some work, and a slight increase elsewhere.

7. There has been some stiffening in prices for rice, as will be seen from the following figures:—

	Fortnight ending 13th March.	Fortnight ending 27th March.	Fortnight ending 10th April.	Fortnight ending 24th April.
Number of <i>hats</i> at which rice was selling at under 8 seers per rupee ...	Nil	Nil	Nil	2
Number of <i>hats</i> at which rice was selling at 8 seers and under 9 seers per rupee ...	5	4	2	8
Number of <i>hats</i> at which rice was selling at 9 seers and under 10 seers per rupee ..	10	12	16	12
Number of <i>hats</i> at which rice was selling at 10 seers and over per rupee ...	11	10	12	9
Total number of <i>hats</i> from which returns were received ...	26	26	30	31

The Deputy Commissioner's returns do not show the selling rates of other food-grains. I am asking him to give them in future. During the fortnight importations of food-grains by rail came to maunds 9,369 against exports maunds 836, as compared with maunds 10,000 and maunds 1,200 during the preceding fortnight.

8. The Deputy Commissioner has arranged to open three kitchens, about 15 miles apart, on the Grand Trunk Road for the relief of indigent wayfarers. This has been found of much benefit in the neighbouring district of Hazaribagh, and it seemed to me to be equally needed here.

HAZARIBAGH.

9. I enclose the Deputy Commissioner's report and annexed statements. The map required by section 27 of the Code has not been sent. I am asking the Deputy Commissioner to supply the omission.

There has been a further rise in the price of rice, as will appear from the following figures:—

	Fortnight ending 13th March.	Fortnight ending 27th March.	Fortnight ending 10th April.	Fortnight ending 24th April.
Number of <i>hats</i> at which rice was selling at under 6 seers per rupee
Number of <i>hats</i> at which rice was selling at 6 seers and under 7 seers per rupee	1	1
Number of <i>hats</i> at which rice was selling at 7 seers and under 8 seers per rupee ...	3	6	20	37
Number of <i>hats</i> at which rice was selling at 8 seers and under 9 seers per rupee ...	27	38	43	37
Number of <i>hats</i> at which rice was selling at 9 seers and under 10 seers per rupee ...	35	26	5	2
Number of <i>hats</i> at which rice was selling at 10 seers and over per rupee ...	9	7	5
Total number of <i>hats</i> from which returns were received ...	74	77	74	77

and this, notwithstanding importation by rail of food-grains, amounting to maunds 20,481 during the preceding fortnight, and to maunds 20,303 during

the fortnight under review. Of other food-grains the average selling price during the week ending the 24th April was, for Indian-corn, 9½ seers per rupee, for marua 11½ seers, and for mahua 37 seers per rupee. The Deputy Commissioner expresses considerable anxiety in regard to a failure in the general food-supply of the district before the next *bhadoi* crop comes to market. I am inclined myself to think that if proper arrangements are made for giving work wherever it is wanted—and this Mr. Herald is doing—the local traders should be able to import sufficient supplies by rail *via* Giridih. Possibly assistance by Government in the shape of advances will be needed to stimulate the trade, and on this point I am asking for the Deputy Commissioner's opinion. So far, however, the Hazaribagh mahajans have been able to make their own arrangements. I am inclined to think that they will continue to be able to do so.

10. As yet only test-works have been opened in this district. They are 35 in number, their sites having been carefully chosen by the Deputy Commissioner. Besides these a few small road and building works are going on under the Public Works Department and the Hazaribagh Municipality. The rate for earthwork is a piece-work rate of Re. 1-9 per 1,000 cubic feet. The total number of persons employed (including men, women and children) was 1,694 (=1,422 male units) and 1,678 (=1,424 male units) during the two weeks ending the 17th and 24th April, as compared with 1,634 and 1,812 during the weeks ending the 3rd and 10th idem, respectively. The falling off is attributed by the Deputy Commissioner to many of the workers being absent, gathering the last of the *mahua* fruit. Hindu holidays and the opening of private zamindari works had also possibly something to do with this.

11. Nineteen kitchens have been opened as against 14 during the preceding fortnight, the total numbers thus relieved being 1,006 (=753 adult units), as compared with 783 during the preceding fortnight. I have pointed out to the Deputy Commissioner that the system of gratuitous relief under Chapter V is more suitable to the villages in the interior off the main lines of traffic, and village lists have accordingly been prepared and are now being tested. A considerable amount of relief is also being given by cotton spinning and weaving, as many as 689 persons having received cotton at Hazaribagh alone during the second week of the fortnight. The number of persons casually relieved by the police under section 12 of the Code was 1,618 as against 1,417 during the preceding fortnight.

LOHARDAGA.

12. The Deputy Commissioner's report is enclosed for perusal by Government.

Mr. Streatfeild still reports no signs anywhere of acute distress, though the demand for labour with the rising prices appears to be increasing. An increase in crime, especially of dacoities, is also apparent, and in one of these cases in which the Deputy Commissioner held a local enquiry, it was found that the crime had been committed by the villagers themselves, some of whom were more or less well-to-do, the object being to wreck their vengeance upon the local mahajan who had refused to make them advances of grain as usual. Mr. Streatfeild is still of opinion that the local stocks of food-grains are sufficient, but that the owners are holding back until the prospects of the coming crop can be judged of.

13. The road work noticed in paragraph 16 of my last report on the Silli-Bundu road in the Panch Parganas was carried on during the fortnight at a piece work rate of Re. 1-9 per 1,000 cubic feet, and at first attracted considerable numbers. On the 22nd ultimo, as many as 1,152 male units were at work on the six sections into which the 11 miles of road has been divided. On the 24th the numbers (male units) fell to 936 on account, it is said, of the increasing hardness of the soil. The average daily earnings per male unit was found to be from 1½ to 1¾ annas, so the rate seems a fair one. The Deputy Commissioner is arranging to open other test-works at Palkote, Lohardaga and elsewhere.

14. A kitchen has been opened at Ranchi by the Local Relief Committee, at which from the 21st to the 24th ultimo 181 adults and 303 children received cooked food, and charitable relief is also being given by the Committee from

locally subscribed funds to respectable persons in need under section 44 of the Code. I regret to find, however, that relief by cotton-spinning and weaving has made little or no progress. The Deputy Commissioner reports that he cannot find any private person who is willing and able to supervise the work, and he is unable to spare the time of any of his subordinates to do so.

15. The upward tendency of rice will be seen by the following figures:—

	Fortnight ending	Fortnight ending	Fortnight ending
Number of <i>hats</i> at which rice was selling at less than 8 seers per rupee ...	Nil	6	27
Number of <i>hats</i> at which rice was selling at 8 seers and less than 9 seers per rupee ..	46	102	81
Number of <i>hats</i> at which rice was selling at 9 seers and less than 10 seers per rupee	53	17	10
Number of <i>hats</i> at which rice was selling at 10 seers and over per rupee ...	17	12	10
Total number of <i>hats</i> from which returns were received ...	116	127	128

Of other food-grains, the average price for Indian-corn was 10 seers and for *marua* 12 seers per rupee. *Mahua* averages 32 seers per rupee.

SINGHBHUM.

16. The position remains unchanged with the exception that continued exportations of rice, which amounted to maunds 5,911, to North Bihar, Hazaribagh and Asansole, are sending up prices, especially in the neighbourhood of the railway. At two *hats* in the Chakardharpur and Manoharpur thanas rice is now selling at less than 8 seers per rupee, at seven *hats* in Ghatsilla thana at 8 seers, while at Chaibassa and other places in the interior it is still selling at 10 seers and over. *Mahua* is from 1½ maunds per rupee in Porahat and the Kolhan to 2 maunds and over in Ghatsilla.

TRIBUTARY STATES.

17. The relief measures taken by the Maharaja of Sirguja up to the week ending 9th ultimo were mentioned in paragraph 18 of my last report. During the week ending 16th ultimo there appears to have been an average daily attendance of 655 men, women and children on the different works, with an expenditure of Rs. 507. The total expenditure up to the 16th April is reported to have been Rs. 6,538. I have not yet been informed of the result of the Maharaja's conference with his illakadars on the 20th ultimo. In a separate report to this office, the Maharaja suggested the advisability of his importing grain for sale to the public. I have advised him, if he thinks seriously of doing so, to send an agent for the purpose to Chaibassa and Raniganj. I have little doubt, however, that the Maharaja will find the cost prohibitive, having regard to the prices obtaining in his own State.

The Thakur of Kharsawan reports that he commenced the excavation of a tank and the construction of a well at an estimated cost of Rs. 500 and Rs. 200, respectively, as relief works on the 15th April; besides which several buildings, including a school-house, a police thana, godowns, &c., are in course of construction or repairs, thus affording extra work.

The Raja of Seraikola has also submitted a statement showing the employment of the following average daily numbers on tanks and *bandhs* during the period 15th March to 15th April:—

Period.	Men.	Women and Children.	Wages paid.		
			Rs.	A.	P.
15th to 31st March ..	419	518	1,218	14	0
1st to 15th April ...	423	610	1,167	2	6

the daily wage for men being 1½ annas and for women 1 anna a head.

The Manager of Changbhakhar states that some tank work is going on at four places in his small State. I have asked him for further particulars.

I have received no further information from the other States since writing my last report. I should, however, mention that the Raja of Gangpur has sent me a liberal contribution of Rs. 1,000 for the Bengal Famine Relief Fund.

No. 263R., dated Daltonganj, the 30th April 1897.

From—R. H. Renny, Esq., Deputy Commissioner of Palamau,
To—The Commissioner of the Chota Nagpur Division.

I HAVE the honour to submit herewith my fortnightly report under section 24 of the Famine Code for the period ending 24th April 1897.

Fortnightly Report for the period ending 24th April 1897 under section 24 of the Famine Code.

1. (1) *Section 24 (1)—Area affected, &c. &c.—Section 24 (1a).*—No change in the period under report.

2. *Section 24 (1b)*—Two new circles were opened during the fortnight, viz., (1) at Imli in thana Patan and (2) at Bakoria in thana Lateyahar. This brings the number of such circles up to 18.

3. *Section 24 (2a)—General state of the affected tracts.*—The general state is growing worse and worse from day to day. The prices of all food-grains are steadily rising.

Prices in week ending 17th April 1897 :—		In the past week the prices were—	
	Markets.		Markets.
<i>Of rice—</i>		<i>Of rice—</i>	
Below 6 seers per rupee	... Nil.	Below 6 seers per rupee	... 2
At 6 seers per rupee	... 1	At 6 seers per rupee	... 9
Above 6 but below 7 seers	... 18	Above 6 but below 7 seers	... 22
At 7 seers	... 5	At 7 seers per rupee	... 15
Above 7 but below 8 seers	... 36	Above 7 but below 8 seers	... 29
At 8 seers per rupee	... 15	At 8 seers per rupee	... 9
Above 8 but below 9 seers	... 15	Above 8 but below 9 seers	... 6
	Seers		Srs chs.
<i>Of wheat—</i>		<i>Of wheat—</i>	
Average of district	... 9	Average of district	... 8 8½
<i>Of barley—</i>		<i>Of barley—</i>	
Average of district	... 13½	Average of district	... 12 1
<i>Of gram—</i>		<i>Of gram—</i>	
Average of district	... 10½	Average of district	... 10 3
<i>Of mahua—</i>		<i>Of mahua—</i>	
Average of district	... 42½	Average of district	... 33 5½

4. *Section 24 (2b).*—The *rabi* has been harvested and stored, and the *mahua* flowers have ceased to fall. I am afraid that the yield of neither has exceeded 6 annas. The little *tema* paddy grown in the extreme eastern and southern parts of the district and the sugarcane and *china* crops are reported to be doing well.

5. *Section 24 (3e).*—The food-stock is, I am inclined to think, at a low ebb. This opinion is forced upon me by the fact (1) that within the last few days reports have reached me from both Garhwa and Lateyahar complaining that supply of rice exposed for sale on market days was far below the demand, and (2) that out of 1,867½ maunds offered for sale at 92 markets during the week ending 24th instant, only 25 maunds remained unsold, and this at 3 markets only. As regards *mahua* the general opinion is that the poor supply of the late harvest has all, or nearly all, been consumed. This opinion is to some degree confirmed by the fact that labourers are steadily resorting in increased numbers to our relief works in spite of the fact that rates have been reduced by the Commissioner on road works.

6. *Section 24 (4d).*—Importation of both Burma and country rice are being made but slowly; but since within the period under report the sanction of Government has been received to the granting of loans up to a limit of Rs. 75,000 to respectable traders of the district for the purpose of assisting them to import rice and payment of bounty up to the limit of Rs. 25,000 on all imported rice has also been sanctioned, I am in great hopes that the traders will take full advantage of these concessions and that great impetus will be given to the import trade.

7. Up to period of report I have granted loans up to Rs. 24,500.

8. The importation of Burma rice within fortnight has been 1,994 maunds 28 seers 10½ chitaks, and of country rice 309 maunds 6 seers 8 chitaks, and Rs. 1,151-14-8 has been paid as bounty.

9. In order to facilitate importation a pass office has been opened at Manatu on the Gaya-Sherghatty-Imamganj-Daltonganj route, and sanction to open a third one at Dungwa on the Baroon-Hussenabad-Garhwa route with a final checking and bounty paying office at Garhwa has been given.

10. *Section 24 (5e).*—No exportations.

11. *Section 24 (6f).*—There has been no rain, and the result is that the heat is intense and is drying up water and burning up the vegetation.

12. *Section 24 (7g).*—The public health continues to be good.

13. *Section 24 (8h).*—*Emigration or immigration of finished people.*—No cases reported.

14. *Section 24 (9i).*—*Condition of cattle.*—Diseases of cattle are very rife all over the district, particularly the foot-and-mouth disease but it is satisfactory to be able to note that

the casualties are few. No complaints have yet reached me of insufficiency of water or fodder, but there must be a change for the worse, if this great heat lasts much longer.

15. (3) *Number of relief works open in or near the affected tracts, &c., &c.*—There were within the period of report 18 relief works open as compared with 16 in the previous fortnight. The 18 circles were in charge of 12 special Circle Officers, two special and one District Sub-Overseer, two Sub-Inspectors—one of Police and one of Excise, and the district kanungo.

16. The district continues to be divided into three Charge Superintendents' Divisions, as before. To each such division an Overseer of the Public Works Department is attached to assist the Charge Superintendent in general supervision, in checking measurements, and in rendering professional advice. The District Engineer exercises general supervision over the whole district from an Engineer's point of view.

17. The strike, noticed in paragraph 15 of my preceding fortnightly, amongst the labourers owing to reduction of rates has continued more or less throughout the period under report, but within the last few days the labourers have begun to come back, and the number on the relief works is steadily increasing. The people had *mehua* to fall back upon, and this enabled them to hold out longer than they could otherwise have done, and it is principally because the *mahua* crop was a very poor one that they are now being driven back by want to the works. This is the time for gathering the Bysack lac crop, and this is giving employment to a number of persons just at present; but as this crop is but a poor one, and as the price of lac is miserably low, I expect in a few days large increasing additions to our relief workers.

18. In this connection I may mention that I have reported to the Commissioner of the Division that, with the advent of the rainy season, work on reservoirs will cease, and that the whole work of giving relief in the district will devolve on Government, as the zamindars will have no works for their distressed tenants. I have therefore suggested that immediate steps should be taken for having in readiness the means of starting the work of raising the railway embankment. A large work will be needed, as this is the only such work that suggests itself to me.

19. I have omitted, I find, to mention that owing to the Maharaj Kumar of Chota Nagpur having started relief works on his own accounts in his pargana Tori, and to his paying higher wages than I do, my two works, viz. (1) at Palumath and the other at Chandwa, have come to a standstill. If the Maharaj Kumar continue with his work, the closing of our ones will not be a matter for regret.

20. In concluding this section, I will mention that I am afraid now that relief works will have to be continued until September next when the *bhadoi* crops will become marketable.

21. Statements D and E are annexed. They show particulars of persons employed on Government relief works.

22. I annex a statement which gives such particulars as I am in possession of regarding private relief. Eight works on which I know relief works are being carried on have defaulted to submit returns in time for this report. The statement shows that 3,593 persons were being relieved on 26 works, of whom 1,930 were men, 1,084 were women and 579 were children. Some information as to rates paid on such private works has been obtained and recorded.

23. (4) *Number of poor-houses.*—No poor-houses opened yet; no demand has been for such.

24. No private poor-houses.

25. (5) *Organisation for employment of artisans, women.*—I am unable to furnish any information on these points, as the reports of the Bengal Branch of the Provincial Executive Committee of the Indian Charitable Relief Fund are bi-monthly and not fortnightly ones, and the report of the Palamau Branch for the half-month ending 30th April will not be ready until about the 6th of May. I shall give in my next fortnightly an account of the doings of the Committee during the latter half of April. I can, however, assert here that the members have their heart in the work, and that rapid progress is being made towards carrying out the objects in view.

26. (6) *Organisation for the distribution of grain doles or money doles.*—Statement Form No. 6 shows the number of persons gratuitously relieved. The number is rapidly increasing notwithstanding all our efforts. I am satisfied, however, that this provision of the Code is not being abused.

27. (7) *Relief in kitchens.*—No kitchens have been opened.

28. (a) (8) *Number of persons to whom loans under the Land Improvement Act, &c.*—Amount advanced during the period under report is Rs. 2,633-5-4.

(b) Total amount advanced during the current (1897-98) financial year Rs. 5,833-5-4.

(c) Total amount advanced during the preceding (1896-97) financial year Rs. 11,100.

29. (9) *Financial Statement for the fortnight, &c.*—Financial statements for fortnight required by section 24 are annexed.

30. The map required by section 27 is appended.

FORM No. 5.

[See Section 26 (i) of the Code.]

R. H. Renny,
Deputy Commissioner, Palamau.

DALTONGANJ,
The 30th April 1897.

No. 19F., dated Purulia, the 1st May 1897.

From—H. F. T. MAGUIRE, Esq., I.C.S., Deputy Commissioner, Manbhum,
To—The Commissioner of the Chota Nagpur Division.

I HAVE the honour to submit the half-monthly report on the state of things in this district, which is prescribed by section 24 of the Famine Code. This deals with the week ending on 17th and 24th April respectively. The following tracts have now to be shown as effected, in addition to those previously shown :—

	Name of Thana.	Area in 1891.	Population in 1891.
1	2	3	4
		Square-miles.	Square-miles.
1.	Jheria	200	43,895
2.	Para	119	43,478
3.	Baghmandi	176	38,502
4.	Purulia	774	222,731
	Total ...	1,269	348,106
	Total previously affected ...	2,104	642,991
	Present totals	3,373	991,097

The addition of Jheria brings the whole of the Gobindpur Subdivision within the affected area, and only the two thanas of Manbazar and Barabhum out of the entire district are unaffected. It must be said, however, that some of the thanas are very slightly affected. In fact, in a year of ordinary prices, they would not be regarded as affected at all. Topchanchi has been removed from the slightly to the seriously affected area. The average daily number of persons on gratuitous relief increased from 246 to 571. This thana is much affected by the closing of Collieries. The complete organization of Relief Circles was in progress during the period reported on, and was completed after it had closed. It is being specially reported. Two Suboverseers were appointed during the fortnight, on a consolidated salary of Rs. 45 each.

2. The general state of the affected area has continued much the same as before. The little sugarcane, still standing on the ground, may have improved a little by the rain that fell both in the period under report and later on. There is nothing new to note about food-stocks. Nine thousand three hundred and sixty-nine maunds sixteen seers of food-grain were imported, and 836 maunds exported—showing a decrease of 1,699 maunds 24 seers and 305 maunds respectively from the figures of the preceding fortnight. There was no rainfall in the week ending 17th April 1897. In that ending 24th April, Gobindpur recorded 34 and Pande 72 inches. Cholera broke out in several thanas (Barabhum, Manbazar, Hura and Chas), along the Grand Trunk Road in the Gobindpur Subdivision, as also in the Sadar station, but has abated, more especially in the Sadar station. The figures of monthly death-rate for March are appended. The

Thana.	Number of deaths.	Death rate per 1,000.
1	2	3
Gobindpur Sub-division.		
Tundi	52	1.75
Gobindpur	90	2.46
Nirsa	142	2.42
Topchanchi	107	2.01
Jheria	87	2.001
Chas	190	1.89
Para	137	3.15
Raghunathpur	302	2.62
Sadar Sub-division.		
Jhela	234	2.40
Purulia	638	2.87
Gaurandi	149	2.83
Baghmandi	89	2.31
Chandil	228	2.46

The total deaths were 2,946; 436 were due to cholera and 1,918 to fever. The reported death-rate per 1,000 was 2.46 (cholera .31; fever 1.10). The details for each thana affected are given in the margin. It is clear that nearly all the figures are quite unreliable. Emigration and immigration seem to have been rather dull than otherwise. Cattle continued to suffer in places from want of water, and the police reported some cases of

cattle-pox in Raghunathpur.

3. One new work was opened, viz., the road from Gobindpur to Pakhuria. Arrangements were also made to open out the Chandankeari Mahal road in Chas thana, the Topchanchi-Dumra road in thana Topchanchi, and a tank in Matha in Baghmandi thana. The average daily number of male units during the week ending 17th April was Rs. 3,345.

who earned Rs. 1,860-10-1½. During the next week the figures were 3,030 units, and Rs. 1,675-4 earnings. These figures show a considerable falling off from the figures of the previous weeks, which was chiefly due to the occurrence of the Bengali New Year holidays. The average daily earning per male unit in both weeks was 1 anna and 5·8 pies. No relief work, as such, has been undertaken by private agency, but some work is being done from advances for land improvement, which employ a considerable amount of labour.

4. No poor-house has been opened.

5. Steps have been taken to introduce the scheme of house-employment of women in cotton-spinning, adopted in Hazaribagh. The Deputy Inspector of Schools has been asked to prepare a Register of persons fit to be employed in this way, with the help of his Mufassal staff. Funds will be supplied by the Local Committee of the Bengal Branch of the Indian Charitable Famine Relief Fund. The Deputy Inspector's Report has not yet been received.

6. The numbers getting gratuitous relief have shown a slight falling off on the whole, from 5,205 to 4,861. The falling off has been chiefly at Gobindpur and Pokhuriya; while in most other places there has been a small increase, probably due to the news of such relief having spread. At Gobindpur there was some dispute as to the supply of rice between the Subdivisional Officer and the Sub-Registrar who distributes the rice. At Pokhuriya, Mr. Campbell appears to be carrying out orders. Also a new road was opened there.

7. In accordance with the orders received with your Memorandum No. 207F., dated 20th April 1897, the Subdivisional Officer of Gobindpur has been directed to open, as soon as possible, three kitchens, along the Grand Trunk Road, at the following places:—

Topchanchi. | Gobindpur.— Nirsa.

An establishment of a clerk on Rs. 20, and 2 peons on Rs. 6 each has been sanctioned for each kitchen. Other menial servants will be composed of persons wanting relief.

8. No advances under the Land Improvement Act were made during the fortnight, principally because the applications for loans were being enquired into. The Subdivisional Officer of Gobindpur was vested with the power of a Collector to dispose of his own applications without any reference to this office. No advance appears to have been made there also. In the last half-monthly report it was stated that advances under the Agriculturists' Loans Act were made to eight persons. The amount of such advances was Rs. 170. This amount was advanced out of the balance of Rs. 500 sanctioned for the purpose of Agricultural Advances for 1896-97, under the famine conditions. The Commissioner's letter, forbidding such Advances, appears not to have been received in this office. The following are the figures in connection with advances under the famine conditions, as required by paragraph 4 of this Government No. 841 (Agri.) Fam., dated 25th March 1897:—

		Rs.
(a) Advanced during period under report	...	Nil.
Total advanced during month.	Under Land Improvement Act	1,600
	Under Agriculturists' Loans Act	170
(b) Total advanced during current financial year, including (a)		1,770
(c) Ditto preceding financial year	...	7,926

9. During the fortnight Rs. 2,923-3-9½ were spent on gratuitous relief, and Rs. 3,535-14-1½ on test-works.

H. F. T. MAGUIRE,

Offg. Deputy Commissioner, Mandhum.

Fortnightly Famine Report of the district of Hazaribagh under Sections 13 and 24 for the fortnight ending 24th April 1897.

General condition.—Figures relate to weeks ending 17th and 24th April 1897.

During the fortnight under report the *mahua* harvest, which gives a supply of food and employment to several hundred thousands of persons in the district, was in progress. Although the early buds were destroyed, as reported last fortnight, lately the weather has been most favourable, and a supply of cheap food has been provided at an extremely opportune period, viz, the period when the selling prices of other foods have risen to serious rates and threatening to rise still further. Up to the beginning of the fortnight surplus village stocks were found (in great or small quantities) in most of the village *hâts*. Now it seems almost certain that, in the worst thanas, this local supply is entirely exhausted. Those who have supplies will not part with them, until the *bhadoi* crop gives promise of good results. The result is, that portion of the population, fortunately a small proportion, I believe, which depends on purchase for its weekly supply of rice, will have to pay Calcutta prices, plus the Mahajan's and the retail dealers' profits. If the population were a purely rice-eating one, the prospects for the next three months would be very serious, but as I have pointed out frequently, only half the population uses rice habitually, and that half is almost entirely composed of persons whom the famine would not throw on relief works, although it may seriously involve them. This population will also be relieved by many taking to "coarser foods" in a year of scarcity. The numbers on relief have further been reduced by the opening of private works. The land-holders are now anxious to obtain loans on the terms offered by Government; many have received instalments, and others have commenced work in anticipation of sanction. These works attract labour more freely than the Government works. Work at the Jail Lake is almost deserted, because a Pleader is employing large numbers in re-excavating a tank within the town of Hazaribagh.

2. Prospects of crop.—Harvesting of *mahua* in progress, probable outturn will exceed 9 annas over district. This may be reckoned on furnishing a supply of food which will tide the cultivating class as a whole over the period till the monsoon breaks, when other sources of livelihood will come into action.

3. Prices.—During the fortnight under report, Returns showing price of rice were received from 71 *hâts*, as in the previous fortnight, and from a few others, for one fortnight only. These have not been taken into account. At 32 *hâts* rice sold at less than 8 seers

Present.	Former fortnight.
32	19
37	33
2	14+5
71	71

in the rupee, at 37 at 8 seers, and at two only at 9 seers, against 19 *hâts* selling at less than 8 seers, 33 *hâts* at 8 seers, 14 *hâts* at over 8 and at 9 seers, and 5 *hâts* at 10 seers in the previous fortnight. The rise in the price is partly due to the damage done to the *mahua* crop, and partly to the depletion of available local stocks. It will closely

follow the prices ruling in Calcutta, as more and more of the retail dealers in the Mufassal obtain their supplies from the wholesale dealers who are importing from Calcutta. The statement prescribed in Commissioner's letter No. 54Fam., dated 15th March 1897, is annexed.

4. *Importation by rail.*—Imports of food-grains by rail amounts to 20,303 maunds during the fortnight under review, as compared with 20,481 maunds during the preceding fortnight. Statements 8 and 9 are annexed. The importation is now barely sufficient to meet local demands and unless the Mahajans see their way to increase the quantities imported within the next few weeks, I am certain special measures will be required to ensure that would-be purchasers meet with supplies. I am in daily communication with the Mahajans on this matter, as I still consider the district needs much more assistance in this direction than in any other form of relief assistance. There may be some doubt whether, without relief works, the people would actually starve, but there is no doubt that, without supplies in the hats of rice, makai, atta, masua or some similar grains, the health of the people will be materially injured. Insufficient or semi-nutritious foods like *sago* and *mahua* must be supplemented by one of the above grains to give adequate nourishment.

5. *Rainfall.*—Sadar, 0·86; Giridi, 0·82.

6. *Public health.*—The general health was good, but small-pox and cholera have been reported from a few places.

7. *Emigration.*—One hundred and sixty-three persons emigrated from the district during the fortnight under report, against 25 only in the corresponding fortnight of the previous year.

8. *Number and nature of public works open in the district.*—The required particulars are given in the accompanying comparative statement, from which it will be seen that, during the second week of the fortnight under review, the total number of labourers employed on the public works, including test-works, was 1,678, as compared with 1,694 and 1,812 during the weeks ending 17th and 10th April 1897 respectively. The falling off was entirely due to many persons being engaged in picking up *mahua*. Besides the number of places shown in the statement, work was available at many others, but no coolies attended them. During the fortnight I have transferred relief works from Road Cess to Provincial. The Road Cess funds are being formally transferred to me, as Collector, for the purpose. I did so to simplify accounts, and to have a more speedy machinery at hand for dealing with any sudden outbreak of distress.

9. *Test-works.*—For works shown in the first three lines at the above statement, payment to the labourers was made according to the Schedule Rates of the Public Works Department. In the case of all other works, the coolies received wages at the test-work rates fixed for this district, that is, piece-work rates at one anna nine pie per 1,000 cubic feet.

10. *Relief under Section 12.*—During the fortnight under report, Rs. 120 were sent to the thana and outpost officers for giving gratuitous relief, as directed in section 12 of the Famine Code, and 364 men 405 women and 809 children received such relief at a cost of Rs. 68-1-3. Where large numbers appear to require relief, a kitchen takes the place of this form of relief.

11. *Loans.*—During the fortnight under report, 29 applications for loans, aggregating Rs. 5,517, were received, of which five were struck off, and the remaining 24 are pending enquiry. The total amount of loans sanctioned up to the fortnight was Rs. 9,850; of this, Rs. 5,980 have been paid, viz., Rs. 5,800 within 31st March last, and Rs. 680 in April 1897. The total amount advanced during the current financial year is, therefore, Rs. 680, against Rs. 5,300 total advance made during the last financial year 1896-97.

12. *Condition of cattle.*—Very little disease reported. Fodder and water sufficient.

13. *Rates of wages.*—The rate continued to be Re. 1-9 per 1,000 cubic feet.

14. *Organisation for employment of artisans, women, &c.*—List of persons unable to work at earthwork, have been prepared and sent to the Charge Superintendents. These Officers are testing the lists by personal enquiries, and introducing the system of making thread from cotton, and giving gratuitous relief. They have been supplied with cotton, and cotton centres have been opened at several new places. At Hazaribagh 689 persons received cotton for spinning during the 2nd week of the fortnight.

Thirty-nine maunds 26 seers and 1 chitaks of cotton were given out, and 35 maunds and 8 seers of thread received during the past fortnight. The amount paid for labours was Rs. 437-13. During the fortnight under review cloth, weighing 28 maunds 17 seers and 14½ chitaks, was received from the weavers, and Rs. 270-5-3 paid to them.

Some cloth has been distributed and a quantity sold. But there is still large supplies in hand for disposal.

15. *Relief in kitchens.*—There are now 19 kitchens open in the district. Particulars regarding 14 of them are given in the annexed Statement 6. Statements 7, 10 and 11 are annexed.

The 30th April 1897.

J. L. HERAID,

Deputy Commissioner of Hazaribagh.

J. L. HERALD,

Deputy Commissioner.

No. 141R., dated Ranchi, the 1st May 1897.

From—H. O. STREATFIELD, Esq., Deputy Commissioner of Lohardaga,
To—The Commissioner of the Chota Nagpur Division.

I HAVE the honour to submit my report, under section 24 of the Famine Code, for the fortnight ending 24th April 1897.

2. *General condition.*—There is, so far, nothing at all alarming to report as to the general condition of the district. Prices unfortunately continue to rise, and complaints of distress consequent on this are frequent; but as far as visible signs of scarcity go, there is, as far as I can observe, absolutely no symptom of acute distress in any part of the district. That the people must find some difficulty in making both ends meet, in face of the extraordinarily high price of rice, must be taken for granted, but I have not, so far, obtained information of a single authenticated instance of actual under-feeding. Helpless old women and beggars have, no doubt, greater difficulty in making a subsistence than in ordinary years, but even they are always, on enquiry being made, found to be getting along somehow on private charity. I made a rapid tour, through the Panch parganas from the 14th to the 17th instant, in order to visit the road works going on there, and came across no single instance of emaciation, the women and children, working on the roads especially, appearing to be in excellent condition. In Rahe some 18 beggars had been regularly fed at the thana from the funds placed in the hands of the police under section 12 of the Famine Code. This was, of course, an improper use of the funds. Since, however, the assistance given by the police had dried up private charity to a certain extent, I have made arrangements for the relief to be continued from the funds of the Charitable Relief Committee. All these beggars come to me, and though all were blind or cripples or diseased, none presented any appearance of starvation, and it is notable that one woman complained bitterly of having been brought to the outpost by the village chaukidar, although she was getting on all right by begging in her own village. The most serious sign of the times is the increase of crime, which has been very marked during the past two months, while during the past fortnight there have been several house dacoities—a crime almost unknown in this district in ordinary years. It is generally believed that these are the work of petty zamindars, and not of distressed persons; but more than one case has occurred of blandars or granaries being broken into by gangs of villagers. On Tuesday last I held a local enquiry into one of these cases in the jurisdiction of the Burmu outpost, 17 miles north of Ranchi, and from the confessions of several of the villagers, it appeared that the complainant, a *bania*, had angered them by refusing to lend grain as usual, and that a leading raiyat, who was on bad terms with him, had taken advantage of this to induce the village to loot his grain. It is noticeable that, in this particular case, almost all of the accused had considerable quantities of paddy of their own in their houses, and not one of them complained of any difficulty in obtaining food or seed-grain, nor could I hear of any such case in the neighbourhood. The people of this district are not very patient or law-abiding, and I fear cases of grain-looting will not be

uncommon during the next two months, if zamindars and *banias*, who hold stores of rice, refuse to lend it out as usual. Crime has been most common in the tract lying in the south of the Lohardaga and the north of the Toto and Sesai thanas and also to the north and east of Lohardaga, and police enquiries show that, in these parts, the people are anxious for work, although they decline to go far from their villages for it. I propose to start test-works in both these tracts, and also near Palkote, the well-to-do people of which allege that distress prevails, although from what I know of that part of the district, I do not believe that labour will be forthcoming at test rates. The Police report that there is some distress in those parts of the Burmu outpost which border on Palamau; and I propose to visit this tract next week, going the following week to Lohardaga by way of Bhandra and Korame, where test-works are about to be started. In accordance with your orders, a kitchen has been started at Ranchi under the supervision of a Sub-Committee of the Local Committee of the Charitable Relief Fund. I visited the kitchen at 5-15 yesterday evening, and found about 50 adults and 400 children being fed. The former were nearly all cripples, and were by no means emaciated. The children appeared to me fine drawn on the whole, but had no appearance of starvation. The Civil Surgeon, who also visited the kitchen yesterday, considers that, as native children go, they are in good condition. There can be no doubt that the poorer classes of the town are using the kitchen as a means of saving themselves the expense of feeding their children. This is, perhaps, as good a use as the kitchen could be put to, but at present it is certainly being taken unfair advantage of by people not in actual want, and I have instructed the Sub-Committee to try, by means of enquiries and grant of tickets, to weed out those children whose parents are not in real want. The Relief Committee, in order to provide work for the needy, also made a grant of Rs. 300 for expenditure under the Municipality on the clearing of a tank. I have, however, absolutely failed to obtain workers at Rs. 1-9 per 1,000 cubic feet, or 2½ annas per 100 cubic feet. Even 3 annas per 100 cubic feet, to which I raised the rate on representation that the soil was gravelly and very hard, failed to attract any labour, and I have now had to order the Overseer to see whether he can get a contractor to take up the work on famine relief conditions. This does not look as if there was any great distress in or around the town at present, nor from the appearance of the labouring classes is there any reason to suppose such to be the case.

3. *Prospects of crops.*—The *mahua* crop is now over and gathered, and from all I can learn, was a 10 to 12-anna crop all round. Lands nearly everywhere have, with the recent frequent showers, been fully prepared, and in many places upland *bhadoi* rice and the lowland broadcast rice have been sown. The season is therefore a very forward one, and there is every prospect of an early *bhadoi* crop. This early preparation of the lands also goes a long way towards ensuring a fair winter rice crop, even if the rains should again be unsatisfactory. Had it not been that last year the very dry, hot-weather delayed preparations and sowing, and thus made the crops late all round, the early cessation of the rains would not have been nearly as harmful as it was.

4. Prices continue to rise, and the reports now show 27 markets in which the rate is less than 8 seers per rupee; 68 markets in which it is 8 seers, 13 markets between 8 and 9 seers; 10 at 9 seers, and 9 at 10 seers, the last being all in Biru. There has also, apparently, been a rise in prices throughout Bengal during the fortnight, and the merchants, who were importing from Purulia, tell me that the rate there is now Rs. 4-11 per maund, which is just under 8½ seers per rupee; 7½ to 7¾ seers per rupee is therefore the cheapest rate at which imported rice can be sold in Ranchi. Burma rice is now Rs. 4-6 a maund in Calcutta, so that no assistance is likely to be afforded by it. This course of prices in this district, I admit, completely beats me, as it does everyone else I have consulted; tracts where it is well known that the rice crop was a 10 to 12-anna one, showing just as high prices as those where the crop was only 6 annas. How with prices as high as they are, distress is not more pronounced, is another puzzle, the only solution for which is, what I have always believed, that Chota Nagpur is by no means the poor country it is generally supposed to be, and that nearly all families have reserves of cash or ornaments on which they draw in hard times. There is no doubt that this year *mahua* is being very generally eaten in place of rice, as is shown by the fact that it sells at 20 to 40 seers a rupee, instead of about 2 maunds as in an ordinary year, and this, although the crop was not altogether a bad one, *gondu* and *marua* continue to sell at from 12 to 16 seers, and appear to be forthcoming in fair quantities in the bazars.

5. *Food-stocks.*—I still adhere to my belief, which is also the universal belief in the district, that there is plenty of grain in the district, but that those who have it are hanging on to it in the hopes of yet higher prices, and also until there is good promise of this year's crop. I am told that, even now, rice is beginning to come more freely from outside villages into the Ranchi bazar, and if the rains break early and well, I am certain an immediate fall in prices will take place.

6. *Importation and exportation.*—Importation from Purulia into this district is still going on, but if prices continue to rise in Bengal, cannot long be contained as a profitable speculation. There is no exportation.

7. *Rainfall.*—There was no rainfall during the fortnight under report. Since the 27th instant, however, there have been daily storms at Ranchi, and apparently from what I can learn throughout the district, this will assist the preparation of lands and the sowing of uplands, and will ensure the germinating of seed already sown. It will also ensure the supply of water and fodder until the rains.

8. The public health and the condition of cattle continue good.

9. *Relief works.*—In the Panch Parganas work was going on throughout the fortnight on the roads from Silli to Bundu, Bundu to Tamar, Tamar towards Chandil, and Tamar towards Araki. The rate paid has been $2\frac{1}{2}$ annas per 100 cubic feet to the labourers, with $\frac{1}{2}$ an anna to the contractors. The total number of labourers employed from the 6th, when work began, to the 24th, was 8,465 men, 3861 women, and 821 children; a daily average of 445.5 men, 202.2 women, and 48.2 children. All the contractors were not, however, employed till the 16th, on which date, on the five lengths of road, 459 men 197 women and 86 children, or 742 souls were employed. The numbers rose with some fluctuations till the 22nd, when 808 men, 433 women, and 48 children, were working, or 12.3 souls, on the 11 miles of road which were under repair in six different places. After the 22nd numbers again fell owing to the increasing hardness of the soil reducing the average wage, and on the 24th, only 686 men, 346 women, and 101 children, or 1,133 souls in all were at work. I have not at present been able to get reliable figures of average earnings, but from what I saw and heard on the spot, I consider that, with the soil as it then was, a man, with a woman or children to help him with carrying, could earn $2\frac{1}{2}$ annas, while alone he would earn from $1\frac{1}{2}$ to $1\frac{1}{4}$ annas. The rate is therefore, I think, a fair one. On the test works which I propose to start at Palkote and Lohardaga and elsewhere, the rate will be Re. 1-6-6 per 1,000 cubic feet or $2\frac{1}{2}$ annas per cubic foot. I may note that the gang system is a failure in this district, each man or family insisting on digging their own chauka and drawing the wage of their own work. This, as it renders payment in pice necessary, is a nuisance, but unless there is a rush for labour, rendering the measurement and payment of the work of individuals or small gangs impossible, I see no necessity to force on the people a system they do not like or understand.

10. *Other relief measures.*—The kitchens at Ranchi opened on the 21st, and up to the 24th, fed 181 adults and 303 children, at a cost of Rs. 15-4-9. A kitchen about to be started at Lohardaga, also gratuitous relief from Charitable Relief Funds, was also granted in accordance with the provisions of Section 44 of the Famine Code to persons in Ranchi, guaranteed by two members of the Relief Committee to be in need. It cannot be pretended that these are cases in which relief would be granted by Government were the relief fund not forthcoming, but as that fund is intended to relieve the respectable poor, without the annoyance of Government enquiries, I feel myself justified in accepting the recommendations of members of the Committee on the subject, especially as the funds are all locally subscribed, and we have no grant from the Central Fund. The cotton-spinning form of relief does not make progress: no doubt, as you remarked in your comments on my report for the second fortnight of March, it might be a success with management—by management, understanding cultivation—but I have no time to cultivate it myself, nor can I spare the time of one of my Deputies for the purpose, and no private person is forthcoming, able and willing to devote himself to this work. All we can do is to see that gratuitous relief is not granted to women, who might spin cotton in return without this Return being made, and if any large demand for relief to distressed females should arise, to grant relief in this form as far as possible.

4. The prescribed Returns as to loans are appended.

Statement showing prices of rice in different huts in the Lohardaga district for the fortnight ending 24th April 1897.

H. C. STREETFIELD,
Deputy Commissioner, Lohardaga.

No. 275T.R.—(Fam.), dated Darjeeling, the 17th May 1897.

From—M. FINUCANE, Esq., Secy. to the Govt. of Bengal, Revenue Dept.,
To—The Commissioner of the Presidency Division.

I AM directed to acknowledge the receipt of your letter No. 31G.—S.R., dated the 6th May 1897, with its enclosures, being a report under sections 13 and 25 of the Famine Code for the second half of April, and in reply to convey the following observations and orders of the Lieutenant-Governor.

2. *Paragraph 3 of your letter.*—There was a sudden cessation in the importation of rice into the affected tracts in the district of Nadia from Katwa in Burdwan and the Rarh country in Murshidabad. The Collector at once sent the District Engineer to make arrangements, and he with difficulty procured 400 maunds of rice. Mr. Garrett has since caused 2,000 maunds of rice to be taken to the Kalantar from Calcutta. He has also arranged with a contractor for weekly consignments of 2,000 maunds each to be delivered at Devagram, in the centre of the tract, and has persuaded two residents of the locality to import rice. The Lieutenant-Governor agrees with you in thinking that the arrangements made by Mr. Garrett were judicious.

3. *Paragraph 29 of your letter.*—In Jessore the Collector has ordered the opening of a test work at Magura, but it is reported that the people would all starve rather than work. The Lieutenant-Governor agrees in the view taken by you that if the people there will not work, that fact shows that the distress is not severe.

4. The statistical statements submitted for the districts of Nadia, Khulna and Murshidabad are not all for the same period, the statements for Khulna being up to the 28th April, and those for Nadia and Murshidabad up to the 24th idem. I am to request that you will issue instructions to the District Officers in order that future reports for all the affected districts in the Presidency Division may, if possible, be for the same period.

5. In Famine Statement B for the district of Khulna, the expenditure shown in columns 8 and 9 appears to be up to 24th March 1897, but the blank in the heading not having been filled in, it is not clear to what period the advances shown in columns 10 and 11 relate. I am to invite your attention to the instructions for these columns given in the foot-notes to Form 11 at page 65 of the Famine Code, and to request that in future columns 8, 9, 10 and 11 of Famine Statement B may be filled up in conformity with those instructions, so as to show the expenditure, including advances, incurred from the 1st April 1897, or the beginning of the current financial year, a foot-note being added stating the total expenditure incurred and the advances made, if any, during the previous financial year.

6. The same remark applies to the information given in columns 8, 9, 10 and 11 of the Famine Statement B for the district of Murshidabad. Columns 8 and 9 are headed "Expenditure since 11th April 1897," while columns 10 and 11 show "Advances since December 1896 up to the end of the month of April."

7. The entries in columns 5 and 6 of Famine Statement B for the district of Nadia, which should show the number of persons for whom relief can be provided by the works remaining on the programme at the date of the report, exactly repeat the figures given in columns 3 and 4 as to the numbers for whom relief was provided in the last programme of relief works, and the same figures were given in the statement for March. I am to enquire whether the relief works hitherto carried out were outside the programme; if so, a foot-note stating this fact should be added.

I am also to invite your attention to the fact that the dates in the headings of columns 7 to 11 have been left blank with the result that it is not clear from what date the expenditure or the advances have been shown.

8. The actual wages per male unit on task-work and irrespective of task shown in columns 4 and 7 of Famine Statement E (Form 7) for Nadia are in no case less than 2 annas and are in some cases nearly 3 annas per diem. I am to request that an explanation of these apparently excessive wages may be obtained from the Collector and submitted to Government.

9. In column 5 of Famine Statement A for the district of Murshidabad the population shown is 17,000, while it is stated in paragraph 14 of your letter that the population of the affected area (167 square miles) in Murshidabad is 25,000, and the total of the figures* given in paragraph 4 of the Collector's report

	Area, square miles.	Popula- tion
(1) Barua circle	45	32,000
(2) Saktipur "	58	25,000
(3) Nowada "	38	18,000
(4) Goan and Jellinghi circle	33	20,000
Total	167	95,000

No. 185G., dated the 3rd May 1897, is 95,000.

The number of labourers shown in columns 6 and 10 under the heading "Numbers on relief works on last day of month" is 12,327. This is evidently wrong, for according to the weekly telegraphic weather and crop report the total number of relief workers and test workers taken together was 2,398 on the 21st April, the last day of the period to which the statement in question relates.

Columns 11 to 16 of this statement have been left blank, with a remark written across columns 12 to 14 (prices) that a separate table of prices is annexed. I am to request that in future such information as is available may be repeated in columns 11 to 16. With regard to columns 15 and 16, I am to invite your attention to section 27 (i), page 13 of the Famine Code. They should show the death rate for the month previous to that to which the statement relates; for example, the Famine Statement A for May should show the death-rate for April.

No. 31G.—S.R., dated Calcutta, the 6th May 1897.

From—E. V. WESTMACOTT, Esq., Commissioner of the Presidency Division,
To—The Secretary to the Government of Bengal, Revenue Department.

UNDER sections 13 and 24 of the Bengal Famine Code, I have the honour to submit my report showing the relief operations in the Division during the half-month ending the 30th April 1897. Copies of reports of the Collectors

Nadia No. 368F., dated the 3rd May 1897.

Murshidabad No. 185G, dated the 3rd May 1897.

Jessore No. 307G., dated the 1st May 1897.

Khulna No. 773.C., dated the 1st May 1897.

of Nadia, Murshidabad, Jessore and Khulna noted on the margin, together with the statistical statements prescribed by the Code, and the skeleton maps in duplicate showing the affected areas, are enclosed. These reports are submitted under section 24 of the Code, except the report of Jessore which is under section 13.

2. *24-Parganas*.—In this district no area is affected by scarcity, nor is any anxiety felt, and I have nothing special to record, except that the recent rains have improved agricultural prospects.

3. *Nadia*.—The report of this district refers to the weeks ending the 17th and the 24th April. As already noticed in my last report, the most prominent feature during the fortnight under review was the sudden cessation of importation of rice from Katwa and the Barh. The grain-dealers of Katwa refused to sell rice to any one except their regular customers. The price of rice rose in consequence to Rs. 5-8 per maund, and the contractors appointed under the Famine Code failed to supply rice in the affected tracts. The District Engineer with difficulty procured 400 maunds of rice which gave temporary relief. Mr. Garrett has since caused 2,000 maunds of rice to be imported into the Kalantar from Calcutta, and has arranged with a contractor to deliver 2,000 maunds per week at Devogram, the most central place in the Kalantar. He also persuaded two gentlemen of the locality to import rice from Khulna and Calcutta. I consider the arrangements made by Mr. Garrett most judicious. I notice that the Circle Officers in the Kalantar have been relieved of the duty of distributing grain doles in order to enable them to make effectual enquiries from house to house, and that relief works under Civil Agency have been placed under the financial control of the Charge Superintendents. I consider these changes in procedure judicious. With regard to the proposal for increasing the permanent advances of the Charge Superintendents and Circle Officers, I have referred the Collector to the letter of the Accountant-General of Bengal (his No. 1037T.M., dated the 3rd February 1897), a copy of which was sent to me with Government No. 351Agri. (Fam.), dated the 8th idem, and requested him to submit further particulars on the subject.

4. *Section 24 (1)*.—There is no change in the area or the proportion of the population affected. The Deputy Collector of the newly-formed subdivision of Chuadanga has reported the advisability of opening test works at Joyrampur in thana Damurhuda, but Mr. Garrett does not consider this necessary at present. I am going there this week, and will consider the matter. As stated in my last report, I have already sent three more Circle Officers for the affected areas. This raises the number of circles and of Circle Officers from six to nine. Two new charges have been formed, one at Chapra and the other at Meherpur, Mr. J. J. Burnville, Assistant Magistrate, being appointed as Superintendent of the former, and Mr. D. Weston, Deputy Collector of Meherpur, of the latter charge. This arrangement will, I understand, involve no additional expenditure, save the appointment of a clerk on Rs. 20 per mensem under each Superintendent.

5. *Section 24 (2)*.—The general condition of the affected tracts is said to have improved during the period under report. With regard to the question of increasing the pay of the chaukidars, I have pointed out to the Collector that this is not the proper place to discuss it, and that I await a separate report. I notice that in the tracts outside the affected area people are getting as much seed as is necessary, but in the Kalantar there is considerable difficulty about it. It is hoped, however, that with the help of the Famine Charitable Relief Fund all available lands will be sown. The

food stocks throughout the district are low: their exports still exceed imports. There were on an average 2·4 inches of rainfall in the district during the fortnight. The public health and the condition of the cattle continue to be fair. There has been no emigration or immigration of famished people.

6. *Section 24 (3).*—The number and character of relief works remain unchanged. The test work at Joginda has not been converted into a regular relief work, as the number of labourers attending it has not since increased. The numbers employed on relief works are given in the statistical statements. No statement has been submitted showing the rates of daily wages and taxes, as required by Government Circular No. 1, dated the 6th January 1897. The Collector has been directed to supply the omission. No relief work has been opened under private agency.

7. *Section 24 (4) and (7).*—No poor-houses or kitchens have been opened.

8. *Section 24 (5).*—Nothing has been reported as to any organization for the employment of artisans, women, &c., at their houses. From Statement Form 6 and Famine Statement E, it appears that the number of adult units in receipt of gratuitous relief increased from 27,785 to 48,371, and the cost from Rs. 9,757 to Rs. 17,852. The Collector has been directed to report whether any relief has been given under section 45 of the Famine Code, and, if so, to how many persons, and what work, if any, was exacted from them in return.

9. *Section 24 (6).*—The changes made in the organization for the distribution of grain doles have been fully reported by the Collector.

10. *Section 24 (8).*—During the period under report, Rs. 700 were advanced to six persons for ordinary land improvement, and Rs. 8,850 to 22 persons for relief of distress under the modified rules made under the Land Improvement Loans Act. Rupees 8,610 were distributed among 530 persons under the Agriculturists' Loans Act.

11. *Section 24 (9).*—The total expenditure on famine relief during the fortnight amounted to Rs. 50,884, against Rs. 30,952 in the previous fortnight. I notice that the grant for works under Civil Agency has been overdrawn by Rs. 35,000, and the Public Works Department letter of credit by Rs. 11,000. The necessary monthly estimates have been submitted to Government for allotment of fund.

12. *Section 24 (10) and (11).*—There is nothing new to record under these heads.

13. *Section 26 (i).*—The Famine Statement D has not been drawn up in the revised form prescribed in Government Circular No. 88 (Fam.), dated the 25th April 1897; nor does it appear that the Sunday wages paid to relief workers employed on task work, or the number of persons to whom they are paid, have been shown separately in a foot-note, as required by Government Circular No. 2Fam., dated the 27th April 1897. The Collector has been directed to make good the omissions.

14. *Section 27 (i).*—The Collector has also been requested to give the figures for April in columns 15 and 16 of the monthly Statement A. He thinks that the famine has caused no marked increase in mortality. No deaths from starvation are reported. An anonymous petition was received by me, alleging that a woman had died from starvation. An enquiry was made by the Collector, and it was found that she had died of puerperal fever after childbirth.

15. *Murshidabad.*—This is the first report respecting this district under section 24. This report also refers to the weeks ending the 17th and 24th April.

16. *Section 24 (1).*—The area affected is said to be 167 square miles, with a population of 25,000. The area has been divided into four circles, viz., Barua, Saktipur, Noda and Gonas-Jalangi. Two Circle Officers were previously appointed. Two more have now been appointed. The Collector has reported that no Superintendent of Charges is required at present.

17. *Section 24 (2).*—It does not appear that the general condition of the affected area has undergone any material change. The only improvements noticed are that a considerable portion of *aus*-growing land has been already sown, that *boro* paddy, which has been grown in about 8,000 bighas, is nearly ripe and promises to give a bumper crop. The prices of food-grains have, however, risen, and distress is being more acutely felt.

18. In the matter of food-stocks, no failure of supply has been reported from any portion of the district except Noda, where it is said to be caused temporarily by the extraordinary demand from Nadia. It will be observed that Mr. Garrett reports that the supply from the Rarh has been stopped. I notice that fires which have occurred of late have made the mahajans apprehensive of the safety of their stores of rice, and have induced many to sell out. Rani Mena Kumari of Jeaganj and Babu Narpal Singh of Azimganj are selling rice at 10 seers a rupee. The exports exceed the imports. About 8 inches of rain fell at Noda and 2 inches at Barua during the period. Cholera and small-pox are said to prevail throughout the district. The condition of the cattle continues to be generally satisfactory, and cattle-disease is reported from Goas and Suti only.

19. *Section 24 (3).*—The number of relief works open during the period was six, viz., four regular and two test works. Test works have also been lately opened at Goas and Noda. The numbers paid by daily wages were 1,035, and those paid for task work 21,513. No statement has been submitted showing the rates of wages and task, as required by Government Circular No. 1, dated the 6th January 1897. The Collector has been directed to supply the omission. The excavation of tanks by private individuals either from loans advanced by Government or otherwise has given employment to about 4,000 persons daily. The excavation of tanks in thana Hariharpara by the Court of Wards has rendered the opening of relief works in that thana unnecessary.

20. *Section 24 (4) and (7).*—No poor-houses or kitchens were opened from public funds. Private poor-houses or *dhermasalas* are maintained by wealthy zamindars of the district, and the numbers relieved in them are said to be increasing.

21. *Section 24 (5).*—The steps taken for the employment of artisans, women, &c., at their homes, have been reported by the Collector in detail. The average number of male units relieved per diem under this head amounted to 239½. The Circle Officers of Barua and Saktipur have also recently started jute and cotton spinning in their own circles.

22. *Section 24 (6).*—The report under this head does not appear to be sufficient. The Collector has been directed to report in detail in his next half-monthly report his organization for the distribution of doles in grain or money. I have also drawn his attention to the provisions of Chapter V of the Famine Code, directing that money doles should be given only under very exceptional circumstances.

23. *Section 24 (8).*—It appears that Rs. 4,100 were sanctioned as advances during the period to nine persons under the modified rules of the Land Improvement Loans Act, and Rs. 4,336 to 791 persons under the Agriculturists' Loans Act. The system and security on which these advances have been given should have been stated. The Collector has been asked to do so in his next report.

24. *Section 24 (9).*—The financial statement shows the total expenditure on famine relief during the period to be Rs. 3,286. The statement does not appear to be complete.

25. *Section 24 (10) and (11).*—In the Collector's report, under section 10 of the Famine Code, no information was given as to the economic condition of the tracts affected except Barua, as well as of the tracts outside the affected areas, except Bharatpur and Gokarna. The Collector has been directed to supply the omissions in his next half-monthly report.

26. *Section 26 (i).*—The famine Statement D has not been drawn up in the revised form prescribed in Government Circular No. 88Fam., dated the 15th April 1897, nor does it appear that the Sunday wages paid to relief workers employed on task work, together with the number of persons to whom they are paid, has been shown separately in a foot-note, as required by Government Circular No. 2Fam., dated the 27th April 1897. The Collector has been directed to supply the omissions.

27. *Section 27 (2).*—In columns 15 and 16 of the famine Statement B no monthly death-rate per mille has been given. The Collector has been requested to supply the omission.

28. *Seasons.*—*Section 14 (1).*—There is no change in the general condition of the tracts marked as affected. The average rainfall in the district during

the fortnight was about 2·4 inches, which has done much good to the cultivation of *til* and *jute*. I notice that the poorer cultivators are in difficulties for paddy seed. Loans under the Agriculturists' Loans Act or free gifts from the Famine Charitable Relief Fund are being given to the most needy cultivators. The imports are in excess of exports. The prices show a tendency to rise in some places. Public health and the condition of cattle continue to be generally good.

29. *Section 14 (2)*.—No public work or test-work was open in or near the affected area. The Collector has ordered the opening of a test work at Magura to keep away idlers. It is said that the people would all starve rather than work, and from this I gather that distress is not severe.

30. *Section 14 (3)*.—Two hundred and three men, 486 women and 347 children were in receipt of gratuitous relief during the period. With regard to the difficulties represented in the way of introducing paddy-husking, I do not understand why there should be any difficulty about women obtaining *dhankis* for husking paddy, as I believe that paddy is husked more or less in every homestead in Bengal. I have enquired further about this.

31. *Section 14 (4)*.—No loans were granted either under the Land Improvement or the Agriculturists' Loans Act during the period.

32. *Khulna*.—The report of this district refers to the three weeks ending the 14th, 21st and 28th April 1897.

33. *Section 24 (1)*.—It is reported that the area and the proportion of the population affected during the period under report remains the same as before, viz., 442 square miles with a population of 262,000. The Collector's attention has been drawn to his last report, in which he said that some six villages, with a population of 3,000, were also affected. He has been directed to explain why these have not been included in this report. The number of relief circles and of officers remain unchanged. I notice that Babu Mathura Nath Mukerjee, Sub-Deputy Collector, has been deputed to learn famine work with a view to his being appointed Charge Superintendent, if necessary.

34. *Section 24 (2)*.—No improvement is noticed in the general state of the affected tracts. Distress is becoming more acute among the "Bhadralok." I notice that some men, women and children are said to show signs of insufficient food. Instructions have been issued by the Executive Committee of the Famine Charitable Relief Fund as to the relief of such cases as are to be relieved. As already reported, there is more distress in thanas Kaliganj and Asasuni than in the other tracts. It is observed that difficulty is generally felt in procuring seed-grain. I have directed the Collector to see that *aus* seed is forthcoming, instructing him at the same time as to how far the difficulty is to be met by advances under the Agriculturists' Loans Act and how far by gifts from the Famine Charitable Fund. The price of rice has risen from ten to nine seers a rupee. There is said to be little or no stock of grain in the affected area. As the Collector's present report refers to three weeks, the statement of imports and exports should have shown figures for that period also, instead of two weeks. It is satisfactory to observe that cholera has abated in the affected area. This is ascribed to a heavy fall of rain on the 19th and 20th April. There is no immigration, but some people are moving to more prosperous parts of the district in search of work. The condition of cattle is reported to be good.

35. *Section 24 (3)*.—There were 31 relief works open in the affected area, besides which a large number of works are being executed by private individuals either by loans from Government or otherwise. Twenty-two of the relief works are tanks, and the rest *bunds* and roads. The piece-work system lately sanctioned by Government in order to enable workers to earn enough to support their wives and children has been started. The condition of labourers on relief works, both public and private, is good. In fact, they do not perform a full day's work, but devote some of their time in cultivation. The numbers employed on relief works and the rates of wages, &c., are given in the statistical statements.

36. *Section 24 (4)*.—I have sanctioned the opening of two poor-houses. These are being constructed at Syamnagar and Asasuni, and will be opened this month. In the poor-house maintained out of private funds, there are 146 inmates.

37. *Section 24 (5).*—Twenty weavers are employed in Kaliganj in weaving cloth. *Mu his* are being employed everywhere locally in making baskets, and blacksmiths in making *kaddis*, for relief works.

38. *Section 24 (6).*—Four hundred and twenty men, 3,361 women and 1,579 children are in receipt of gratuitous relief. I notice that doles for this kind of relief continue as before. With regard to the Collector's remarks regarding the dole given for paddy-husking, I have drawn his attention to the extract from the report of Mr. Bell quoted in Government No. 608, dated the 1st March 1897, a copy of which was sent to him for report, from which it will be seen that paddy was given for husking to able-bodied men and women entitled to gratuitous relief, each man getting as his weekly dole 6 seers 2 chitaks and each woman 5 seers 11 chitaks, besides bran and husk, 32 seers of clean rice being returned out of one and-a-half maunds of paddy given to each per week. I have requested the Collector to report whether 36 seers of clean rice cannot be returned out of one and-a-half maunds of paddy as in Rajshahi. With regard to the relief given from the Famine Charitable Fund, I observe that there is a tendency in some local committees to relieve two or three of the better castes only and to leave out the others. This was to be expected, as the "Bhadralok" are not distinguished for their sympathy with the classes which they consider below their own.

39. *Section 24 (7).*—There are no kitchens.

40. *Section 24 (8).*—A sum of Rs. 4,850 was sanctioned in advances to 14 persons during the period under report under the Land Improvement Loans Act. Nothing was sanctioned under the Agriculturists' Loans Act.

41. *Section 24 (9).*—The total expenditure on famine relief during the period was Rs. 15,727, against Rs. 6,516 in the preceding fortnight.

42. *Section 24 (10) and (11).*—There is nothing special to report under these heads.

43. *Section 26 (ii).*—The Famine Statement D has not been drawn up in the revised form prescribed in Government Circular No. 88Fam., dated the 15th April 1897, nor does it appear that the wages paid to relief workers employed on task work and the number of persons to whom they are paid are shown separately in a foot-note, as required by Government Circular No. 2Fam., dated the 27th April 1897. The Collector has been directed to make good the omissions.

44. *Section 27 (i).*—It is satisfactory to note that there was no death from starvation during the period under report.

No. 868F., dated Krishnagar, the 3rd May 1897.

From—J. H. E. GARRETT, Esq., Officiating Collector of Nadia,
To—The Commissioner of the Presidency Division.

I HAVE the honour to submit herewith my report under section 24 of the Famine Code for the second half of April. The figures in the statements attached to this report refer to the weeks ending on 17th and 24th ultimo. My next report will deal with the figures for three weeks.

2. The most prominent feature in the history of the period under report is the sudden cessation of importation of rice from Katwa and the Barh. About the middle of last month the grain-dealers in Katwa finding that supplies from the interior had almost ceased suddenly, resolved to refuse to sell to any but their regular customers. In consequence of this, large number of carts which had gone there from this district to obtain rice had to return empty: also the carts which had gone into the interior of the Barh met with a very similar fate. As I have already reported, the inhabitants of the Kalantar, and also of other large tracts in the district, were entirely dependent on small daily supplies from the Barh, and the result of the sudden cutting off of this source of supply was that the price of rice without any warning went up to as much as Rs. 5-8 per maund, and even at that price there was the greatest difficulty in obtaining an adequate supply. All the contractors for the supply of rice to the relief centres failed, and the doles had to be eked out with grain, *kalas* or any edible grain which could be procured. As soon as information was brought to me, I sent the District Engineer over to Katwa, and he, with the assistance of the Police, managed to procure 400 maunds of rice, which relieved the difficulty to a certain extent. I have since sent 2,000 maunds into the Kalantar, and I have arranged with a wealthy contractor to deliver 2,000 maunds of rice a week at Devagram, which is the most central place in the Kalantar. The effect of the cessation of supplies from the Kalantar was felt both in Maherpur and in Krishnagar. In the former place the price went up to Rs. 5-8, and the local supply almost entirely ran out. The Subdivisional Officer, acting under my instructions, has arranged

for a regular supply from Calcutta, and the price in the town has now fallen again to Rs. 5. In Krishnagar the price rose to Rs. 5-4. I persuaded two gentlemen of the place to import from Khulna and Calcutta, and it has since fallen to Rs. 4-14. Now that confidence has to a certain extent been restored, I trust that we shall not have any more violent fluctuations in price.

3. During the period under report I made all arrangements for the introduction of two changes in procedure to have effect from the 1st instant. In my No. 328F., dated the 22nd April 1897, I gave full details of the first of these changes, under which Circle Officers in the Kalantar are relieved of the mechanical duty of actually distributing doles, so that they will now have ample time for the house-to-house visitation, which is so necessary when a famine becomes severe. The second change is the placing of all Civil Agency works under the financial control of Charge Superintendents. This course has rendered it necessary to very largely increase the permanent advances of those officers, as reported in my No. 342, dated the 27th ultimo. I have also been obliged to create two new charges, viz., Ohapra and Meherpur. I have appointed, as Superintendents the Assistant Magistrate, Mr. J. J. Barnville, and the Subdivisional Officer of Meherpur, Mr. D. Weston, respectively. The only extra expense involved is that of a clerk on Rs. 20 for each of these officers.

4. At the commencement of the fortnight under report the Revenue Secretary, Honorable Mr. Finucane, visited the district, and inspected the distribution of gratuitous relief from four centres and various relief works in the Kalantar.

5. I now proceed to record my remarks on the various headings given in section 24 of the Famine Code.

(1) There has been no marked change in the area and proportion of the population affected. I have, however, received a report from the Subdivisional Officer of Chuadanga, stating that in his opinion it is desirable to open test works at Joyrampur in thana Damurhuda. I am not, however, inclined to think that this is necessary. I intend to visit that thana personally within the next few days, and shall then be able to form a definite opinion: in the meantime, I still treat the tract as unaffected. There are now four charges and six circles: the two Circle Officers appointed for the Kalantar and the man appointed for Meherpur have not yet arrived. As soon as they take over charge, the number of circles will be increased to nine.

(2) I think that the general state of the affected tracts may, on the whole, be considered to have improved during the period under report. The agricultural outlook is favourable, and as cultivation is going on briskly, there has been a sensible falling off in the number of relief workers. On the other side must be placed the increase in the price of rice entailing greater hardship on the people generally and on those who have to depend on fixed money incomes in particular. While on this subject I beg once more to bring to prominent notice the serious difficulties under which chankidars have been placed. A very large majority of these men in this district draw not more than Rs. 4 a month, an income not sufficient to enable them to purchase even one seer of rice a day. I beg that the Commissioner will be good enough to obtain the very early orders of Government on this point. The prospects of the *aus* crop are as favourable as they could be. We have had good rain throughout the district, though more is still wanted in the north-east. In the country within a radius of 10 miles of Krishnagar there are large tracts in which the young paddy is already well above the ground, and the people appear to be getting as much seed as is necessary. In the Kalantar, however, there is considerable difficulty about seed. I am to-day sending Rs. 4,000 from the Charitable Relief Fund to the Superintendent of Mira, to be distributed in advances for seed grain to indigent cultivators whose lands without this help would remain fallow. The mahajans and zamindars, generally speaking, are beginning to let out their seed grain, and I am in hopes that in one way or another nearly all the available land will be sown. The food-stocks throughout the district are very low: the only large store which I am aware of is that in the possession of Mr. Gregson at Shikarpur; he is selling and advancing freely, and is replenishing his stock by importations from Calcutta and elsewhere. I have caused to be published as widely as possible throughout the district the fact that rice may be purchased in Calcutta at less than Rs. 4 per maund, and I hope that this will stimulate importation. The statement attached to this report will show that exports of food-grains still exceed imports, though there is more nearly an equilibrium than there has been since the commencement of the famine. I note below the quantity of rain registered at the five registering stations during the period under report—

	In.
Krishnagar	2.36
Meherpur	3.31
Kushtea	1.78
Chuadanga	1.77
Ranaghat	2.69

During the last few days there has been a further fall of more than an inch at each of these stations except Kushtea, which has received about half an inch. The weather is still unsettled, and we shall probably have more rain. The public health is still fair, considering that this is the cholera season. There has not been a really severe outbreak of cholera anywhere within the affected area, though sporadic cases have occurred. There has been no emigration or immigration of famished people. The condition of the cattle is good: the recent rain has brought on the grass well, and the cattle now have plenty of fodder.

(3) There has been no change in the number or character of relief works since my last report. There has been no increase in the numbers attending at Joginda, so I still class the work there as a test work. The District Engineer has not yet furnished me with the statement showing rates of wages and tasks notwithstanding take-ends: consequently, as I go out on tour early to-morrow morning, I am unable to make any remarks on this point. All the other statistical information will be found in the statements attached to this report. No relief works have been opened under private agency.

(4) & (7) No poor-houses or kitchens have been opened at the expense of either public or private funds.

(5) & (6) I have already reported in full the changes which I have made in the organization for the distribution of grain doles. I have nothing further to add under these heads. The necessary statistical information will be found in the appended statements.

(8) & (9) Figures are given in the statements attached to this report, and no comments appear necessary. I note, however, that the Civil Agency grant and the Public Works Department letter of credit have been overdrawn by Rs 35,000 and Rs 11,000, respectively. The necessary applications for fresh grants have been made.

(10) All the requisite information under this head has already been furnished.

(11) No marked change has occurred in the condition of the tracts bordering on the affected area.

6. I have attached to this report duplicate copies of a map of the district showing the areas affected. There have been no changes since my report for the latter half of March was submitted.

7. The figures in columns 15 and 16 of Statement A attached hereto give the rates for March: all the figures for April have not yet been received, and I am consequently unable to give the corresponding rates for April. Judging, however, from the figures already received, the death-rate in the affected area is still well below that in the non-affected area, and I see no reason for believing that the famine has so far, at any rate, caused any marked increase in mortality. No deaths from starvation are reported. I received, however, an anonymous letter stating that a woman had starved to death in Nakasipara thana. I had a careful inquiry made, and was informed that she died of puerperal fever after childbirth.

8. I have nothing to add to my remarks in paragraph 5 of my report for the latter half of March, on the subject of steps taken to improve the water-supply. Work has not even yet been commenced on the Shikarpur khal, as delay was caused owing to the plans and estimates having been drawn up under the Irrigation Branch of the Public Works Department, whereas the work is to be carried out by the Roads and Public Buildings Branch. I hope, however, to have it completed before the commencement of the rains.

[See Section 20 (h) of the Code.]
FAMINE STATEMENT D.

District Nadia.

For the half-month ending 24th April 1897.

[illegible]

W. MAXWELL,
For Collector.

No. 77S.O., dated Camp Kaliganj, the 1st May 1897.

From—W. H. H. VINCENT, Esq., Collector of Khulna,
To—The Commissioner of the Presidency Division.

I HAVE the honour to submit the following half-monthly famine report for the second half of April, together with the necessary statements. Figures for three weeks of April are given. During the past fortnight I have been down to the affected area, and visited 13 relief works and five of the circles. The area affected during the period under report continued the same as before, 442 square miles with a population of 262,000 estimated. It has not been found necessary to open relief works in Satkhira thana itself. Some loans for village works have been granted, and some of the indigent women and persons unable to work are receiving relief from the Indian Famine Charitable Relief Fund. The number of relief circles is the same as previously reported, eight with 17 centres for distribution, one being a fortnightly centre in one of the *abads* in the very south of Paikgacha.

2. There is one Charge Superintendent in charge of both charges. I have deputed Babu Mathura Nath Banerjee, Sub-Deputy Collector, down here to learn the work, and will subsequently, if necessary, report to you for sanction to make him a Charge Superintendent. At present he is working for a Circle Officer who is ill at Asasuni.

3. *General state of area.*—Distress is becoming more acute, especially among certain classes: men with large families, men of respectable castes, widows and children are suffering very considerably. Some of the children show evident signs of insufficient food, and the same may be said of a few men and women. Families in which there are two or more workers are fairly well off, as there are works open all over the affected area, and there is also a demand for labour on the new *abads* where labourers are already going off in some numbers.

4. The Kaliganj and Asasuni thanas are affected more severely, a great deal more than the remaining parts of the area. In the map they have, therefore, been coloured brown and the other portions blue, as distress is not so acute there as was believed.

5. *Crop prospects.*—There are practically no crops in the ground in the area affected. Cultivation for *aus* and jute continues, and I have seen a fair area cultivated and some land sown. But there is a general complaint of a difficulty in procuring seed-grain. The cultivators have not the money, and the seed is scarce owing to the fact that little *aus* is grown here in good years.

6. *Food-stocks.*—There is still a fair supply of grain to be found in the local *hats*, where it is imported from the eastern part of the district, and also from the districts of 24 Parganas and Backergunge. There are no stocks or stores in the affected area, except in the *golas* of a few well-to-do men, and these probably only sufficient for their private consumption. One or two fishing villages have also been reported to have bought and secured sufficient rice to last them till the next crop. The price of rice continues to rise, though not very rapidly. It is now 9 seers all over the affected area against 10 seers in the last report. This means 7 pice a seer retail and about Rs. 4-4 a maund. All our labourers on works being classed as B, no change in our rate of wages has been necessary as yet.

7. *Importation and exportation of food-grains.*—As I am writing this from camp, I have not the figures to refer to, but it is known that there continues to be a small export of food-grains both by rail and boat from the district, but not from the area affected, where there are no stocks. Small stocks of rice are imported for sale at the local *hats* from neighbouring districts and the eastern part of this district as reported above.

8. *Public health.*—I have not the death-rate figures here to refer to. They will be forwarded direct from the Sadar. Cholera has, however, abated somewhat in the area affected towards the end of the period under report. The figures for the Kaliganj thana, which I have obtained from the police, show that the death-rate for April is considerably lower than in March, being 4.15 against 6.47 for March and against 4.13 last year for April. The death-rate in March for this thana similarly though high, viz., 6.47, was considerably less than the death-rate for the same period last year, which was 7.34. As the figures for March were high, I thought it advisable to compare them similarly with last year's figures. I found on enquiry that in the area now affected by distress the death-rate in March this year was considerably lower than the death-rate last year when there was no scarcity. The fact is that in March each year there is a scarcity of good water, and cholera breaks out and carries off large numbers. No deaths from starvation have been reported, nor have I heard of any, though I have visited a considerable number of villages. There was a fairly heavy fall of rain on 19th and 20th, which has temporarily checked the cholera to some extent. The Civil Medical Officer has been out with me also on my present tour, and is distributing cholera medicines freely and visiting villages. There were also, during the month under report, two doctors at work in the affected area, especially for cholera duty. The services of one man have now been dispensed with. In addition to this, cholera medicines have been freely distributed in all thanas and post-offices. I tried to obtain permanganate of potash in order to disinfect the drinking water-supply, but the Civil Medical Officer failed to get any in Calcutta, as all stocks were exhausted. The measures taken to improve the water-supply will be described in the proper paragraph. On the whole, there has been an improvement in the public health towards the end of the month. It is impossible to predict if this improvement will last. A spell of hot and dry weather will almost certainly bring on cholera again.

9. *Emigration or immigration of famished people.*—No immigration. Some of the people are moving east to new *abads* and to the more prosperous part of the district in search of work.

10. *Condition of cattle.*—Good Fodder is available.

11. *Number of relief works open.*—There are now 31 relief works open in the affected area, or about four in each circle. The number of relief workers employed in all was 3,764 on Wednesday last. The average wage earned per adult worker for last week was Re. 1-10½. The cost of earthwork varied from Rs. 2-0-10 to Rs. 2-2-7 per 1,000 cubic feet, which is satisfactory, as many of the works are tanks. In addition to these, there are private works and works being executed by loans, and I doubt if there are any villages except, perhaps, in the very sparsely populated area in the south of the district, on the edge of the Sunderbans, which are not within 5 miles of a work. Of these works, 22 are tanks and the rest are *bunds* and roads. The numbers paid on daily wages were 851-96. Those paid by task were 2,808-45. The rate of wages continued as before:—

		Maximum.			Minimum.		
		Rs.	A.	P.	Rs.	A.	P.
Adult male	...	0	2	0	0	1	6
Big child	...	0	1	0	0	0	9
Small „	...	0	0	6	0	0	6

If price of rice rises 4 chitaks per rupee, rates will be raised 3 pies for male adult. Task work was in force throughout the month. The Government have now sanctioned piece-work to enable workers to earn enough to support their wives, and it has just been started. The condition of the labourers on relief works is fair. In some cases men with large families are showing signs of insufficient food. Circle Officers have been ordered to watch the works for such cases. In addition to this, there are some private works open, and a large number of works executed on loans, some of which I have been able to visit. The condition of the labourers on some of these is not so good as it should be. This is partly due to the fact that the men do not always do a full day's work, but devote some of the time for cultivation. I to-day heard of seven works being executed on loan in one circle. No detailed information regarding these works is available.

12. *Poor-house.*—Nil. The Commissioner having at the end of the month only sanctioned two poor-houses, the work of construction was taken in hand, and they will be opened this month. One hundred and forty-six sick persons and children are fed in a poor-house maintained out of private funds in Kaliganj. There was one death from phthisis in the poor-house in April. Mr. Finucane having ordered better arrangements to be made in case of fire, I have had three extra doors opened and 30 *gharas* full of water kept ready for emergencies. I have also caused covered lamps only to be used in place of open lights. The food supplied has been examined by me and the Civil Medical Officer on several occasions, and is of good quality and sufficient in quantity. The two new poor-houses will be opened at Syamnagar and Asamuni. The food given is 1½ lb. rice (weighed uncooked), some dāl and vegetables.

13. *Organisation for employment of artisans.*—Weavers have been employed in North Kaliganj and South Kaliganj, but only in small number, about 20 of them. To-day I was asked to assist some in Nurnagar, but I am inclined to doubt if there is such distress among them as to necessitate very extensive issues, and I think we shall do well only to issue

thread in small quantities after careful enquiry as at present. In addition to them, we employ *Muchis* locally everywhere in making baskets for relief works and *Kamars* for *kodals*, which it is difficult to obtain from Calcutta.

14. *Organization for distribution.*—Doles continues as before. Recipients come to fixed centres once a week, and take their doles and their task of jute. In one circle (Paikgacha) there is a fortnightly distribution in the village to the extreme south of the *elaka* in a new *abud*. All able-bodied women do jute-twisting or paddy-husking: five seers of jute are issued, and one and a half maunds of paddy. Orders have been issued for the introduction of the Rajshahi scale of remuneration in paddy-husking, but we only give out sufficient paddy to provide what rice we require for grain doles. The last figures show that 420 men, 3,361 women and 1,579 children are in receipt of gratuitous relief. This includes wives and families of workers. It is hoped that the introduction of the piece-work system will lead to some reduction in that number. In addition to these persons, large numbers are being relieved from the Indian Famine Charitable Relief Fund. There is, however, a tendency in some local committees to relieve two or three better castes only and to leave out the others. I have issued orders to prevent this.

15. *Relief in kitchen.*—Nil.

16. *Number of persons to whom loans made.*—During the fortnight Rs. 8,950 have been advanced in all for village works. Of this amount, Rs. 5,575 has been advanced as second half instalments in cases of works half completed and Rs. 3,395 in cases of new works. Loans for 14 new works were sanctioned during the fortnight, the loans covering an amount of Rs. 4,850. No agricultural loans were made during the fortnight, but some funds have been placed at the disposal of the Subdivisional Officer (Rs. 2,500) out of the Indian Famine Charitable Relief Fund for distribution among cultivators, to enable them to purchase *aus* seed-grain. The system and security on which our advances are made have already been reported in detail.

17. *Financial Statement.*—Receipts amounted to Rs. 27,177-14-1½, including Rs. 20,000 granted by Government and the balance of allotment made by the District Board. The expenditure during the half-month is noted below:—

Relief works—				Rs.	A.	P.
(a) Task work	6,121	1	3
(b) Daily wage	2,013	1	9
Artizan's relief	567	2	3
Grain and money doles	5,049	11	1
Reserve grain and other expenses	1,975	12	2

The total balance in hand is Rs. 11,151-1-7½.

In addition to this, we have a grant for the current year for loans for village works of Rs. 50,000, of which Rs. 8,950 has been expended.

18. *Condition of area outside present distressed area.*—Reports regarding the *boro* crops in Mollahat are favourable. There has been a rainfall of over 2 inches in Bagirhat during the fortnight under report and over one inch in Satkhira. Reports of distress are received from the Dumuria thana, but I cannot think that the distress is such as to necessitate gratuitous relief. Private charity will do what is needed. I will visit Mollahat, Dumuria, and Moralganj as soon as possible after returning from here. I would have visited them this month, but I had to wait till the 24th for a steam-launch, which has been kindly lent to me for famine work and which I expected earlier.

19. *Action taken to improve water-supply.*—Of 31 works, 22 are tanks. We have completed six tanks in all, and others will be finished shortly. The District Board have advanced Rs. 1,500 for making small excavations in old tanks and for sinking ring-wells. We have also issued loans for 65 new and old tanks in the affected area, and there are a fair number of private owners who are re-excavating tanks.

20. In conclusion, I wish to draw the attention of the Commissioner to a point raised by him in his last report to Government. In paragraphs 4 and 5 of his letter No. 12G.—S.R., dated the 14th April, the Commissioner says: (1) that men and women earn more by paddy-husking than labourers on relief works; (2) paddy has been given out indiscriminately, and the Commissioner does not understand why it has been given out to able-bodied men. In point of fact, paddy-huskers get 3½ seers of rice per week in grain, i.e., about grain worth 5 annas 6 pies, and, if paid in money, 8 annas 9 pies. If the women worked on relief works, they would earn, or might earn, 10 annas 6 pies. It is incorrect, therefore, to say that the paddy-huskers get as well paid even as the workers. They can only earn a minimum wage, whereas a relief worker earns a maximum wage.

(2) I do not understand on what information the statement is based that paddy is issued to able-bodied men. In fact, paddy is only issued to 4 men in all, 2 of whom are blind, and 2 others who are on our gratuitous relief list for proper reasons. I cannot think that the issue of paddy to four men, who are entitled to gratuitous relief, has any material effect on the numbers who come to our relief works. The case of the women is different, and they will not come on relief works, whether you issue paddy or not; also in fact we are not issuing paddy in large quantities at all, but only sufficient to give rice for grain doles. Jute-twisting is an ordinary form of employment.

I have now over 400 maunds of jute string, and I must again ask for orders as to what is to be done with it.

STATEMENT I.

KHULNA.

Statement showing the prices of common rice for the fortnight ending the 28th April 1897.

No. 185G., dated Berhampore, the 3rd May 1897.

From—E. V. LEVINGE, Esq., Collector of Munshidabad,
To—The Commissioner of the Presidency Division.

I HAVE the honour to submit my first half-monthly report under sections 24 to 27 of the Bengal Famine Code.

2. *General condition.*—There has been no marked change in the general condition of the district during the fortnight save that prices of food-grains have everywhere risen, with the result that the distress is more acutely felt. As far as future prospects are concerned, the rain has made the outlook more hopeful, and a considerable portion of the *aus*-growing land has already been sown. In the last few days there has been a slight fall again in prices, due partly to the brighter prospects regarding the next *aus* harvest, but chiefly to temporary causes which will be referred to later on. I visited portions of Nawada, Hariharpara and Barua thanas during the last week, and I found it necessary to open relief works in the Nawada thana and especially to organize a system for the distribution of gratuitous relief. The reports received from parts of Gowas and Jellinghi also tended to show that the time has arrived for starting relief in this locality. I have accordingly arranged for two more test works—one in the Nawada thana and the other in the Hoorahi outpost of thana Gowas. The figures in the statements appended to this report relate to the fortnight ending on the 24th of April, so that these two test works, one of which was commenced on the 26th and the other only yesterday (*i.e.*, on 30th April 1897), are not included in them. I have appointed a circle officer for Nawada in anticipation of sanction, and I have asked you to send me a qualified circle officer for Gowas.

3. *Affected areas.*—The map submitted herewith in duplicate in compliance with the provisions of section 27 of the Famine Code shows the affected area in three colours: the brown represents seriously affected localities where regular relief works are in progress; the deep-blue represents areas now considered also seriously affected, where test works have been opened; the light-blue represents the slightly affected area.

4. *Circles.*—The tract seriously affected has been divided into four circles, the boundaries and areas of which are noted below:—

(1) *The Barua circle*—Which includes the northern portion of Barua thana, the southern portion of Gorabazar thana, and a portion of Gokarna thana, comprising an area of 45 square miles, with head-quarters at Barua. This is bounded on the north by the villages Jaggarnathpur and Diara, on the east by the villages Palinda and Golla, on the south by Beldanga and the river Dwarka, and on the west by the village Govindapur and river Dwarka. The population of the affected area is about 32,000.

(2) *The Saktipur circle*—Which includes the southern portion of the Barua thana, and the less severely affected portions of Bharatpur, comprising an area of 56 square miles. The head-quarters of this circle are at Maganpara in Barua thana, but the circle officer is also in charge of all the villages lying within the jurisdiction of the Saktipur police outpost which are situated on the opposite side of the Bhagirathi; and he exercises a general supervision over the less affected villages situated within the jurisdiction of the Rangamatti outpost of Gokarna thana. The northern boundary of this circle is Beldanga and the river Dwarka, the eastern boundary is Golla, Patherbil, and Shekphukharia, the southern boundary is Ramnager, Lokenathpur, &c., and the western boundary is the river Dwarka. The population of this circle is about 25,000.

(3) *The Nawada circle*—Comprises an area of about 33 square miles. The northern boundary of this circle is the Ohhota Bhairab river, the eastern and southern boundaries the river Jellinghi and the western boundary the Sati river. The population of the circle is about 18,000.

(4) *The Goas and Jellinghi circle*—Which includes a portion of Goas and Jellinghi thanas, comprises an area of 33 square miles. The northern boundary of this circle is the river Moregunge. The Ganges forms the eastern boundary, the villages of Ujaypur and Nowdapur form the southern boundary, and the Bhairab river the western boundary. The population of the circle is about 20,000. As I have already stated, a test work has been opened in this circle, but a circle officer has not yet been appointed.

5. *Crop prospects.*—The rain that has fallen within the last ten days has improved the prospects of the crops very materially. The *boro* paddy, which is nearly ripe for harvest, has been grown this year in at least 8,000 bighas, and it promises to be a bumper crop. There are 4,000 bighas of this crop in the *til* called *Burabur pathar* in the Jangipur subdivision, and 3,000 bighas at Jalkar *bil* in the Kandi subdivision. The early *aus* paddy may also be considered safe, and this crop ought to be in the market by the beginning of July. The sowing of the regular *aus* paddy is being pushed on vigorously, and the *til* (sesamum) crop at Nalbilar math and Jellarer math in the Kaudi subdivision promises well. Indigo and mulberry also have greatly benefited by the rain, although in the case of the latter it came too late to save the March bund.

6. *Food-stocks.*—No failure of supply has been reported from any portion of the district except Nawada, and here the failure was only temporary and due to the extraordinary demand from the adjoining tracts of the Nadia district. The supply of rice and paddy at the local hâts of Saktipur, Satui, Dopokhuria, Berhampore and Elahigange increased very considerably during the latter half of the fortnight under report, and this has been ascribed to the following among other causes:—(1) The numerous fires that have occurred have made the mahajans apprehensive of the safety of their stores of rice and paddy and have induced many to sell out; (2) the sale of rice at 10 seers per rupee by Rani Mena Kumari of Jiagunge and Babu Narpat Singh of Azimgunge, which has led the regular grain-dealers to apprehend that other benevolent persons in this district may do the same on a more

extensive scale if there is any further rise in prices. The price of rice which was 7½ seers per rupee nearly all over the Sadar ten days ago is now 8 to 8½ seers per rupee; (3) the brighter prospects of the *aus* crop which have induced mahajans to advance.

7. *Importation and Exportation*.—The subjoined table (Table A) shows that the exports still far exceed the imports. A comparison of the present figures with those furnished with my last half-monthly report will, however, show that the exports are now beginning again to decrease. The temporary rise in exports are due to the late *rabi* harvest, which resulted in large quantities of grain and arhar being exported from this district both to Calcutta and the North-Western Provinces.

8. *Rainfall*.—The table (Table B) annexed shows the rainfall at the different registering stations during the period under report. The rainfall was particularly heavy in the affected portions of Goas, Jellinghi and Barua though the table annexed gives no indication of this fact. At Nawada 3 inches fell and in the south-eastern portion of Barua about 2 inches. Since the 24th April there have been some heavy showers, and the fall has averaged from half an inch to one inch all over the district.

9. *Public Health*.—Cholera has broken out in almost every portion of the district and continues to increase. Hitherto the year has been an exceptionally healthy one, the death-rates for January, February, and March having been considerably lower than the rates for the corresponding months of 1896. Figures for April are not yet available, but I fear that they will compare unfavourably with those of previous years. Small-pox is also prevalent, but the deaths from this cause are not numerous.

10. *Emigration and Immigration*.—The police reports again show emigration of about 2,000 persons to the neighbouring districts for work. I doubt, however, whether these figures represent the emigrations in the last half-month only. No immigration has been reported.

11. *Cattle*.—There is sufficient fodder for cattle, and their condition continues to be generally satisfactory. An outbreak of anthrax has been reported from Goas and of foot-and-mouth disease from Suti.

12. The number of relief works open during the fortnight was 4 and of test-works (excluding those lately opened in Goas and Nawada) 2. The number of men paid by daily wages was 1,035 and those by task work 21,513. This gives a daily average for the 12 working days of 86 and 1,793, respectively, or a total of 1879 male units. The actual number of individuals represented by these figures is 2,948. The daily attendance is now over 3,500. Famine Statement D is enclosed herewith which gives the details of attendance at the different relief works and test-works and of the amounts spent.

13. Relief works under private agency, mainly in the shape of re-excavation of tanks, are going on all over the district and chiefly in the affected tracts. In the Barua circle alone there are 13 tanks under re-excavation, giving daily employment to over 2,000 persons, and this explains the falling off in the numbers on the relief works. The granting of Land Improvement Loans under the new rules in other circles also has given employment to at least another 2,000 persons. The re-excavation of tanks undertaken in Hariharpara thana by A. N. Ray's estate and by the zamindar of Choan and others makes the opening of the relief works in this thana unnecessary.

14. The maximum rate of wages was raised from 6 pice to 7 pice during the fortnight, and it has been raised to 2 annas a day from the 1st of May in the regular relief works in the Barua thana.

15. *Poor-houses*.—Up to the present no public poor-houses have been opened in any part of this district. There are several private poor houses or dharmashalas maintained by rich zamindars, and the numbers relieved in them are said to be on the increase. The following persons may be mentioned as relieving 50 or more persons in their private almshouses:—Maharani Surnomayi of Cassimbazar, the Nawab Bahadur of Murchidabad (who has a *lungar-khana*), Roy Setab Chand Nahar Bahadur, Rani Mena Kumari, the Sen family of Berhampore and Babu Sirish Chandra Ghose of Beldanga.

16. *Employment of artisans and women*.—The organisation for the employment of men and women in weaving, spinning, husking of paddy, quirning of kalai and milling of wheat has been completed at Berhampore by Deputy Collector Mr. N. G. Mukerjee, who is the Secretary of the District Charitable Relief Fund. The following table will show the number employed during the last fortnight daily in these works:—

NATURE OF WORK.	Number of men.	Number of women.	PAYMENTS MADE.		Rate of wages.	REMARKS.
			Cash paid.	Grain doles given.		
1	2	3	4	5	6	7
1. Jute-spinning	...	182	Rs. A. P. 23 10 9	M. S. C. 3 5 2	One anna per seer.	The majority of the persons have not been paid for the last week, as they have not brought back the articles (string, thread, cloth, flour, &c.) which they are making in their own houses; hence such small payments. Persons taking grain doles instead of money are given grain at 16 seers per rupee.
2. Spinning of pierced cocoons	...	14	23 10 0	15 0 0	Six pice for 160 cocoons and spinning thread	
3. Making silk-weaving	15	15	23 5 0	...	four annas per yard.	
4. Paddy-husking	...	30	17 0 0	7 33 8	One anna per maund of paddy.	
5. K. L. breaking	...	10	3 0 0	2 21 4	Six pice per maund.	
6. Flour-making	...	10	10 0 0	0 31 4	Seven annas per maund.	
7. Miscellaneous works in connection with the above	1	3	2 0 0	1 10 0	...	
Total	16	293	168 14 9	29 10 2		
Male units	16	293		
Total male units per annum	...	240		

Besides these, 15 men, 40 women and 45 children were given gratuitous relief by Mr. Mukerjee, the expenditure incurred in cash being Re. 1-6 and in grain 3 maunds 20 seers 2 chitaks. The circle officers of Barua and of Saktipur have recently started jute and cotton spinning in their own circles. The circle officer of Barua employed one man and ten women in jute-spinning, 11 women in cotton-spinning and 25 women in the spinning of pierced cocoons, and one man in miscellaneous work. The expenditure in connection with these works has not been specified by the circle officer, as the wages in the majority of cases will be paid in the current week, only materials having been issued by him. The expenditure on purely gratuitous relief incurred by him during the fortnight was Rs. 25-15-3, 77 persons having been relieved by him in this way. The circle officer of Saktipur employed 17 persons on cotton-spinning and 41 persons on jute-spinning at a cost of Rs. 90-9-6, which includes the cost of materials, and he gave grain doles to 172 persons and money doles to 24, the total cost incurred on purely gratuitous relief being Rs. 63-13-6.

17. *Organisation for the distribution of grain doles or money doles*—Besides the official organisation for gratuitous relief alluded to in the last paragraph, the various members of the Relief Committees formed in this district and certain police officers have been entrusted with money and grain for purposes of relief by the District Charitable Committee. Purely gratuitous relief is being administered by nearly all these persons, but it is impossible to give accurate figures for the fortnight as returns are not prepared on a uniform system or submitted regularly.

18. No relief in kitchens has been organised, and I do not think that it will be required.

19. Tables D and E summarise all the prominent facts regarding the granting of loans under the Agriculturists' Loans Act and the Improvement Loans Act.

20. A financial statement (Table F) is appended together with a table of prices of common articles of food (Table G) and a statement in Form 11 prescribed in section 27 (ii) of the Famine Code.

* The figures in connection with gratuitous relief are deduced from those submitted by circle officers and the Secretary of the Relief Committee.

No. 307G., dated Jessore, the 1st May 1897.

From—L. F. MORSHEAD, Esq., Collector of Jessore,
To—The Commissioner of the Presidency Division.

In continuation of this office No. 184G., dated the 20th ultimo, I have the honour to submit the following half-monthly report for the half-month ending the 30th April 1897 under section 13 of the Famine Code.

1. (a) *General condition, prospects of crops and rainfall.*—The circumstances of the tracts marked as affected in the Magura subdivision continue as such, and those of them not in the subdivision are said to be becoming assimilated gradually to the condition of this tract; otherwise the district gives no cause for anxiety. During the half-month under report there were abundant rainfalls in the Magura, Jhenida and Bangaon subdivisions. The Sadar subdivision and the subdivision of Narail also received some rain. The subjoined table shows the rainfalls in the head-quarters of the Sadar and other subdivisions.

Date.		Sadar.	Jhenida.	Magura.	Narail.	Bangaon.
		In.	In.	In.	In.	In.
19th April 1897	...	0.52	0.43	1.56	0.03	0.25
20th " "	...	0.28	0.03	0.36	0.06	0.17
21st " "	...	0.23	1.75	0.54	0.51	0.33
22nd " "	...	0.16	0.22	6.22	0.33	0.04
28th " "	0.31
29th " "	...	0.51	0.58	0.40	...	1.39
Total	...	1.70	3.01	3.03	0.93	3.18

These rains have done much good to cultivation which is now in its full swing. Some low lands have been sown in the Magura subdivision, and in some of them the seeds have germinated, and with the recent rains they are expected to thrive well. In many other lands til and jute have been sown and they have sprouted—are doing well. In some parts of Muhammadpore, thana Salikha and Sripore outpost the rainfall has been small, and they are being anxiously watched. The poorer cultivators are in difficulties for paddy seed-grain, as the mahajan are unwilling, and in many cases probably unable, to advance money and grains for the purpose. Steps are being taken to give the most needy among them loans under the Agriculturists' Loans Act or free gifts of seed. During the half-month under review a strong tornado passed over the head-quarters station Magura and a few adjoining villages on the 18th ultimo. Its duration was about 10 minutes or so between 4 P.M. and 5 P.M. About 1,000 kutcha houses with thatched roofs are said to have been either blown away or more or less damaged, rendering many of the poorer classes homeless. An estimate has been called for from the Subdivisional Officer about the money that will be required to relieve the most needy of them.

(b) *Prices, food-stocks, importations and exportations.*—The subjoined statement shows the importations and exportations of food-grains during the half-month under report.

	Imports.	Exports.
	Mds	Mds.
Railway and Steamer Company	... 1,040	1,448
Country boats	... 9,253	1,545
Total	... 10,293	2,993

There was thus an excess of about 7,000 maunds of imports over exports. This is much below the figures furnished in the previous half-monthly reports. Although the imports have fallen off, still they were sufficient to guard against actual depletion. The consequence of this falling off in importations has been to raise the prices at some places. The prices show a tendency to rise at others, and in some other places they are stationary. The prices of common rice now vary from 9 to 11 seers per rupee throughout the district. This state of things is expected to continue until the next crops come in.

(c) *Public health.*—Public health continues to be generally good. Cholera has also abated a little. Some anxiety is felt for scarcity of water in certain places. The Subdivisional Officer of Magura reports that he has given away the whole of Rs. 500 advanced by the District Board Fund for the purpose of well-sinking in his subdivision. This has undoubtedly done much good to the people of the localities where the wells have been dug accordingly. He has been advanced Rs. 500 more.

(d) *Emigration and immigration.*—Emigration and immigration of famished people are not reported. Some ill-nourished beggars are reported to be moving about from house to house in the Magura subdivision for alms.

(e) *Condition of cattle.*—Condition of cattle has improved. There is now sufficient fodder.

2. *Public works.*—No public work was open in the shape of test work or relief work under the District Board or the Public Works Department or any of the Municipal Committees. Orders have, however, been recently issued to the Subdivisional Officer of Magura to open a test work to keep away idlers.

3. *Any cases of relief under section 12, Famine Code.*—The subjoined statement shows the number of men, women and children gratuitously relieved during the half-month under report and amount spent on such relief.

Gratuitous relief statement.

Subdivision.	Men.	Women.	Children.	Total.	Amount spent.
1	2	3	4	5	6
17th and 24th April—					Rs. A. P.
Sadar	30	45	18	91	31 6 0
Bangaon	9	28	18	55	25 15 6
Narail	45	94	...	139	46 17 6
Magura	119	324	313	756	188 9 7
Total	203	486	347	1,036	291 11 8

Steps are now being taken to overcome the difficulties in the way of introducing the paddy-husking system on a larger scale, as noticed in my last report submitted with this office No. 184G., dated 20th ultimo. As an alternative the introduction of jute-twisting has been suggested, and I have asked the Subdivisional Officer's opinion on this point.

4. *Number of applications under the Land Improvement Loans Act and the Agriculturists' Loans Act.*—No fresh application was received under any of the Acts after the close of the financial year. The statement is therefore blank. Out of the unpaid balance of Rs. 23,500 under the Agriculturists' Loans Act, Rs. 22,500 has been allotted to Magura and Rs. 1,000 to Jhenida subdivisions; the whole of Rs. 5,700 under the Land Improvement Loans Act has been allotted to the Magura subdivision for agricultural loans. The work of receiving loan applications under the Agriculturists' Loans Act is now being vigorously pushed on.

5. Skeleton maps are herewith submitted in duplicate with the affected tract coloured brown.

I spent two or three days in Magura during the period under report, and am starting for the subdivision again.

No. 278T.R.—(Fam)., dated Darjeeling, the 17th May 1897.

From—M. FINUCANE, Esq., Secretary to the Govt. of Bengal, Revenue Dept.,
To—The Commissioner of the Bhagalpur Division.

IN acknowledging the receipt of your letter No. 102F., dated the 4th May 1897, with its enclosures, reporting on famine-relief in the districts of Bhagalpur and the Sonthal Parganas, and on the condition of the other districts in your Division, I am directed to say that the Lieutenant-Governor considers the report to be generally satisfactory. I am at the same time to convey the following observations and orders of the Lieutenant-Governor for future guidance.

2. *Paragraph 3 of your letter.*—You say that in North Bhagalpur the feature of the fortnight has been a reported reversal of the course of trade with Nepal, the exports exceeding the imports by over tenfold, and you suspect that the figures have been transposed. The Lieutenant-Governor will be glad to know the result of the enquiry made by you on the subject.

3. Columns 3, 4, 5 and 6 of Famine Statement B for the district of Bhagalpur, which should show the numbers for whom work is provided by the programme of relief works, have been left blank with the remark that tanks are selected wherever required, and that there is no difficulty in obtaining sites. It does not appear how employment is to be provided when the rains set in and tanks can no longer be excavated. I am to request that in the statement for the month of May the columns in question may be filled up on the basis of the new annual programme. If the relief works in progress are outside that programme, and there is no diminution of the works therein entered, a note stating the fact should be inserted in the statement.

It appears that the figures entered in columns 8, 9, 10 and 11 of the statement above mentioned are for the financial year 1896-97. I am to invite your attention to the instruction for filling up these columns given at the foot of the Form (No. 11) at page 65 of the Famine Code. The expenditure including advances to be shown should be from the 1st April or the beginning of the current financial year, and a foot-note should be added stating the total expenditure incurred and the advances made, if any, during the preceding financial year.

4. The Deputy Commissioner of the Sonthal Parganas submits two separate reports for the same period, one dealing with the Jamtara subdivision and the other with the remaining subdivisions of his district. The whole district should be dealt with in one consolidated report, the condition of the subdivisions not actually distressed being briefly described first, and information with regard to the affected tracts being then given under the several heads prescribed by section 24 of the Famine Code.

Columns 1 to 3 of the Famine Statement A for the Sonthal Parganas should be filled up for the whole district, and not for the Jamtara subdivision only as is done at present.

102F., dated Bhagalpur, the 4th May 1897.

From—W. B. OLDHAM, Esq., Commissioner of the Bhagalpur Division and Sonthal Parganas.

To—The Secretary to the Government of Bengal, Revenue Department.

In continuation of my No. 57F., dated 19th April 1897, I have the honour

(1) Collector of Bhagalpur's No. 164J., dated the 2nd May 1897.

(2) Deputy Commissioner, Sonthal Parganas' No. 212F., dated 1st May 1897, and enclosure and appendices.

(3) Deputy Commissioner, Sonthal Parganas' No. 221F., dated 1st May 1897.

to submit the half-monthly reports and statements for the Bhagalpur district and Sonthal Parganas marginally noted. The statements for the Bhagalpur district have only just reached me, and there has been no time for checking them beyond seeing how far they comply with the foot-note instructions. Government orders Nos. 60 and 61 ^{T.R.}_{F.M.}, dated 27th April 1897, were not received by me

till the 2nd instant, but the point noticed in paragraph 4 of the latter order had already been brought to the Collector's attention. It is observed that column 10 of Famine Statement E for the Sonthal Parganas repeats the error noticed in this statement for the previous fortnight, though it was pointed out to the Deputy Commissioner on the 20th April. On the 19th April I inquired from Mr. Carstairs what the exact meaning of the passage about loans in section V of his report, No. 90F., dated the 17th April 1897, was, but the reply has not yet reached me. From other proceedings before me I see that he is still overburdened with a mass of urgent judicial work.

2. From Monghyr and Purnea no change has been reported. In the Malda district it is said that prospects are very bright; rates of wages equivalent to 2 annas a day for male adults are still refused, and the *boro* rice which was cultivated in the marshes on an unusually extensive scale this year will give a full outturn. Prices have continued to slowly rise throughout the Division. Though out-balanced by the exports, the volume of imports of edible grain is increasing, and Burma rice has now begun to be sold in the Sonthal Parganas as well as in the other districts. We are now at the period which I well remember in Birbhum in 1866, when we first began to be conscious that there was something like famine in the land. As then, nearly all preliminary agricultural work had been done and it is the slack time.

3. In the Bhagalpur district there is still room for hope that it may not be necessary to declare any part of the southern area affected (and the same grounds hold for the Deoghur subdivision of the Sonthal Parganas). In North Bhagalpur the feature of the fortnight has been a reported reversal of the course of trade with Nepal, the exports exceeding the imports of grain smuggled in thence by over ten-fold, but this has to be verified, as I suspect that the figures have been transposed. Enquiry is being made on the subject.

4. I have no information yet as to how charitable relief funds are being expended, or if they are being expended at all in the Sonthal Parganas, though I know that they are large. The only response that has been obtained so far to my attempts to stimulate recourse to them is the information that an additional Committee has been formed to raise more funds. I shall be unable to fully support the Deputy Commissioner's applications for grants for advances till there is some information about the proposals for expending these contributions, as the advances asked for would for the most part go for objects for which these funds were subscribed.

5. Mr. Carstairs is being asked to explain the announcement made in paragraph 14 of his report, No. 221F., dated the 1st May 1897, that he has suspended civil judicial work for the next two months. If he refers only to his own personal work apart from the admission of cases, applications and appeals, and not to the ordinary civil judicial work of the district, the step is necessary and so far unobjectionable.

No. ^T₁₀₄, dated Bhagalpur, the 3rd May 1897.

From—H. J. McINTOSH, Esq., Collector of Bhagalpur,

To—The Commissioner of the Bhagalpur Division.

In continuation of my letter No. 89F., dated the 17th April 1897, I have the honour to submit the following report under section 24 of the Bengal Famine Code. The figures of this report relate to the weeks ending 17th and 24th April.

2. During the period under review heavy rain fell throughout the whole district. The fall occurred on the 20th and 21st April. At Bhagalpur the fall recorded was 0·80, at Madhipura 2·50, at Supaul 1·89, and at Banka 1·55 inch. This rain, although it has done immense good, has not reduced the numbers on relief works. From Banka the Subdivisional Officer writes—"The recent rain was greatly beneficial to indigo and sugarcane. It was also very useful in moistening the earth and enabling the cultivators to plough the lands for the sowing of *bhadoi* crops for some days. Should there be another copious shower a month afterwards it would give great impetus to the cultivation of *janera* and other *bhadoi* crops." The rain seems, however, to have done some damage to *mahua* fruit (*ror*) in this subdivision. The Subdivisional Officer of Madhipura says " * * * there has been heavy rainfall doing an immense good to the *mung* and paddy crops. It drew the labourers for a short time to the field. Owing to the slackness of the season for employment of labourers to field-works, the labourers on the Government relief works have begun to increase." Mr. Christian, the Charge Superintendent of Bongong thana, writes—"The inch and-a-half of rain that we had on the 23rd March enabled the raiyats to put down an unusually large area of paddy and *mung*. It was beginning to suffer from the drought when the two and-a-quarter inches of rain which we had on the 21st April saved it. So now we can say that we have a very fine crop of paddy and *mung*. On the whole there is no cause for alarm in the condition of the people." In Supaul the rain is said to have "done great benefit to the standing crops (*mung*, sugarcane, and paddy)."

3. Speaking generally for the whole district it may be said that future prospects have greatly improved owing to the rain, but that for the present no immediate relief has been experienced. Prices have gone up, the season is a slack one for agricultural operations, the poorer classes are coming to the end of their slender stocks and consequently the number of persons requiring relief is increasing. Apart from the rise in prices, there is nothing alarming in this. We expected the numbers to rise in April and May, and the increase is not beyond our expectations.

4. Dealing first with South Bhagalpur, I have very little to say at present. There has been no marked change here. The work opened in the Sadar subdivision continues to be unattractive. On the 24th April only 169 persons worked on it. Private works opened in the neighbourhood seem to afford employment of a more congenial nature to those in want of it. Only 24 persons are in receipt of gratuitous relief from private funds, but many are so relieved by the agents of the Indian Famine Charitable Relief Fund. Unfortunately it is difficult to give the exact number relieved from the fund as returns are sent in either incomplete or not at all, and relate to different periods. Probably about 500 people receive weekly doles from the fund in the Sadar subdivision.

5. In Banka too there has been no material change. The Subdivisional Officer is carefully watching the Katauria thana and also the Dharaiya outpost of the Banka thana, which is considered to be threatened. But in neither of these areas has it yet been necessary to open any work. Meanwhile the Subdivisional Officer is making excellent use of the funds placed at his disposal by the Indian Famine Charitable Relief Fund and with a good organisation is affording much relief to the very poor classes. During the fortnight under report 2,990 persons were relieved from this fund at a cost of Rs. 1,959-2-6.

6. The rest of this report will follow the headings prescribed in section 24 of the Code.

7. (1) *Area affected, &c.*—No material change should, I think, be made at present in describing the area affected. It practically remains the same as before, namely, thana Bongong in the Madhipura subdivision and about 300 square miles in the Supaul subdivision. But in addition to this area, relief from the funds of the Indian Famine Charitable Relief Fund is being given over large areas throughout the district. These areas it is difficult to define with precision, but they more or less correspond with the Kotwali and Colgong thanas of the Sadar subdivision, the Katauria and Banka thanas of the Banka subdivision, the Madhipura thana of the Madhipura subdivision, and part of the Pratabganj thana of the Supaul subdivision. It would be incorrect to describe all those areas as "affected," although no doubt a certain measure of distress does exist throughout them. But until relief works are opened in them by Government and are attended by such numbers as to indicate the existence of severe distress, I exclude them from the category of "affected areas." No change has been made during the fortnight under report in the number of circles and officers in charge.

8. (2) *General state of the affected tracts.*—In Madhipura, the recent rain has done "incalculable benefit," as the Subdivisional Officer says, to the *mung* and paddy crops, and there can be no doubt that the prospects of these crops are now exceptionally favourable. Field operations are also unusually far advanced for the season of the year. But prices have gone up, common rice is now quoted at Madhipura at 8 seers, and *marua* and *kurthi* at 13 seers to the rupee. At Bongong the prices are slightly higher. The numbers on relief works are therefore increasing. The immediate causes leading to the increase in numbers are, first, the fact that for the time being field operations are over, second, the rise in prices, and third, the fact that a number of tanks that were being excavated by private individuals have been finished. The Subdivisional Officer also reports that a large number of labourers from Monghyr have come on to some of the works. Food-stocks are believed to be sufficient. There is no importation of food-grains, whereas exportation by road still continues. Public health is satisfactory, and there is no movement of famished people.

In Supaul too prices have risen, the last quotations being rice 8 seers 3 chitaks, *kurthi* 12 seers and *marua* 12 seers 3 chitaks to the rupee. It is in view of this, I think, that the

Subdivisional Officer says "the condition of the people in the affected tract has been gradually becoming bad." He offers no explanation of this remark and certainly there is nothing in his figures of relief-workers to justify the remark. The number of persons attending the works on the 1st May was only 3,213—a much smaller number than what I originally expected at this time of the year. Here, as in Madhipura, the prospects of crops are exceedingly favourable, and apart from the rise in prices, there has been no unfavourable feature during the fortnight. Food-stocks are believed to be sufficient, and exportations by rail still exceed the importations. Public health is good, and there is no immigration or emigration of famished people.

9. (5) *Number of relief works open.*—In Madhipura there were seven relief works open, against six in the preceding fortnight. To relieve the congestion caused by the recent increase in the number of labourers, I have directed the opening of four more works. Some of these have already been started. The appended statements give full information as to the number of workers and their classification, and also as to wages, &c. In Madhipura the wage is on the 7 pice scale and in Supaul on the 6 pice scale. As prices have now risen in the latter subdivision it will be necessary to raise the wage there also.

In Supaul, there are four relief works open.

The information regarding private relief works is as usual very incomplete. The Subdivisional Officer of Madhipura observes "nil" against this head. This must be incorrect, as some tanks are still being dug by private individuals. The Maharaja of Sonbursa has also furnished me with an "abstract weekly statement of relief work from 18th to 24th April" showing a total of 5,783 persons employed by him on some tanks and embankments which he has started.

From Supaul, the Subdivisional Officer gives a list of 27 tanks that are being excavated by private persons.

10. (A) *Poor houses.*—There are none, and none are required.

11. (5) *Organisation for employment of artisans.*—There is nothing required under this head. Some cotton spinning by women is being done in Madhipura, funds being supplied from the Indian Famine Charitable Relief Fund.

12. (6) *Organisation for the distribution of grain doles.*—This goes on as before in the Madhipura and Supaul subdivisions, but the relief afforded by Government is now largely supplemented by the local committees of the Indian Famine Charitable Relief Fund. I have already stated what is being done in the Sadar and Banka thanas by the committees. In Supaul, the Subdivisional Officer says "gratuitous relief under the Indian Famine Charitable Relief Fund was distributed to 3,325 persons." In the Madhipura subdivision, 4,013 persons are said to have been relieved during the fortnight from this fund. But it is to be observed that some of these are already included among the people receiving gratuitous relief from Government, the Subdivisional Officer having supplemented their subsistence ration by giving a little extra from the Charitable Fund. The Subdivisional Officer's report on the subject is not very clear, and I cannot gather from it the total number of persons in receipt of gratuitous relief from the two sources, viz., Government and the Charitable Fund. The Subdivisional Officer will be asked to clear this up.

One zamindar in the Madhipura subdivision has submitted a return in which he shows that he is giving gratuitous relief to 25 persons. In Supaul, Rai Gunput Singh Sahib is relieving 587 persons and the Sub-Manager, Darbhanga Raj, 56 persons.

12. (7) *Relief in kitchens.*—None.

13. (8) *Loans and advances.*—No loans or advances have been given during the period under review, although there have been many applications for them. An allotment of Rs. 20,000 for the purpose was only placed at my disposal at the close of the month.

15. *Financial.*—The expenditure on Famine Relief is still being incurred and accounted for by the District Board whose funds are now exhausted. I have asked for sanction to conduct the operations at the expense of Government from 1st May and have also asked for a permanent advance. But this has not been sanctioned yet. The following is the expenditure during the period under review as reported by the Subdivisional Officers and that incurred in the Sadar:—

	Madhipura.			Supaul.			Sadar.		
	Rs.	A.	P.	Rs.	A.	P.	Rs.	A.	P.
(a) Relief works—									
(1) Daily wages	...	396	8 6	...	103	1 0		
(2) Task work	...	9,468	1 6	...	1,975	6 0	133	11	3
(b) Relief in poor-houses		
(c) Relief of artisans	
(d) Relief by grain doles	...	1,227	4 5	...	605	0 8	15	1	9
(e) Relief in kitchens		
(f) Cash allowances to non-working children and adult dependents, section 84.	Not reported.			...	59	9 9		

16. The prescribed statements are submitted. They reproduce the figures given by the Subdivisional Officers. No attempt at check or comparison in this office has been found possible as many of the statements were only received yesterday (Sunday) evening.

No. 219F., dated Dumka, the 1st May 1897.

From—R. CARSTAIRS, Esq., c.s., Deputy Commissioner of the Sonthal Parganas,
To—The Commissioner of the Bhagalpur Division and Sonthal Parganas.

I HAVE the honour to submit my report, under section 24 of the Famine Code, for the second-half of April 1897.

2. There has been no addition to the area declared to be distressed, so that my report under this section is for the Jamtara subdivision only.

3. As I am hard pressed with judicial work, I submit a copy of Mr. Stark's report, with such remarks as seem to be called for.

4. The outturn of the *mohua* crop has been better than was estimated. Mr. Stark now estimates it at 8 annas. This, I think, is still too low, and 10 annas is more near the mark.

5. The outbreak of cholera is of the kind that occurs every year, and did not last.

6. The employment given on private works is gratifying, and I am glad to see the missionaries are still doing good work in this way. The stone-breaking industry has been resumed. In addition to the works reported, I have sent Rs. 2,000, out of the Rs. 6,000 recently received from the Raja of Hetampore, for expenditure on the Deoghar-Nagar road, which will give employment to the people in the distressed tract to the east. Part of this fund of Rs. 6,000 is being spent in the south of the Dumka subdivision, and part is so far unallotted. The money was received on the 28th April 1897, and so none of it has been spent so far.

7. A map of the affected area is attached in duplicate, showing in red the works that are in use.

No. 81R., dated Jamtara, the 27th April 1897.

From—A. W. STARK, Esq., Subdivisional Officer of Jamtara,
To—The Deputy Commissioner of the Sonthal Parganas.

I HAVE the honour to submit my report under section 24 of the Famine Code. The figures dealt with in this report relate to the period from the 10th instant to the 23rd.

1. The area affected is the same as that referred to in my last fortnightly statement. The population, too, is the same. The number of relief circles, too, is the same.

2. *General state of the affected tracts.*—The state of the affected tracts continues to be the same.

The distress has been somewhat alleviated by the *mohua* crop, which is estimated at half an average crop.

Food-stocks are deficient in the affected area, but a fair amount continues to be imported by country carts from the eastern part of the subdivision and from the Birbhum district.

The *price of common rice* in the Jamtara hat is 8 seers, but in the bazar it is somewhat dearer. The price of *mohua* has gone up from 10 annas to Rs. 1-2 per maund.

Rainfall.—During the period under report there have been two falls of rain, amounting to 0·87. It has done good to sugarcane only, and has improved the pasturage and water-supply for cattle.

Public health has generally been good in the famine area. Cholera broke out in two villages—Samipur and Birgaon, in taluk Pubia, but the disease disappeared within a week. The number of deaths was 14.

The death-rate for the whole subdivision was 1·10, and for the distressed area 1·60.

Emigration and immigration of famished people.—It is supposed that the number of emigrants to the tea-gardens is larger this year, but the numbers are not known.

The depot-keepers at Jamtara and Karmater report that, owing to the abundant supply of labour, the tea-gardens this year are more particular as to the class of labourers sent up, and, in consequence, there is no demand for low caste Hindu coolies, such as Domes, Haris, Bauris, &c.

No immigration of famished people is noticed.

The *condition of cattle* in the affected area is good.

3. Five relief works have been open in or near the affected area. Statement D, showing the number paid by daily wages and the number performing task-work, is appended hereto.

The rates of wages are given in the statement of maximum and minimum wages and tasks appended hereto.

Private relief works.—These consist of tanks, which are being made by Messrs Cornelius and Rowat, local missionaries, who are employing about 400 persons daily at Budhudih and Bhaga, in taluk Pubia, and at Kasitar, in taluk Pindari. There also are tanks being made by the zamindar of Pubia and by some persons who have taken advances under the Land Improvement Loans Act. The chief works in hand are—

- (1) Rajbaudh by zamindar of Pubia, who is employing about 120 daily.
- (2) Bhutgaria by Nabin Raut and Kali Raut, who are employing about 60 per diem.
- (3) Thakur Pukhur by Kanai Lal Sircar, who is employing about 50 per diem.
- (4) Natun Pukhur by Ranga Raut, who is employing 50 persons per diem.
- (5) Tilabal tank by Gopi Manjhi, who is employing 100 per diem.
- (6) Rajib Mondol's tank in Chakri, where 50 are employed daily.
- (7) Jibon Mondol's tank in Bewa, where 40 are working daily.
- (8) Sonathor tank where Ram Jibon Sarkhel is employing 50 daily.
- (9) Asouhira tank where Ishani Mondalain is employing 60 daily.

(10) Bena tank where Bekro Nath Roy is employing 50 daily.

(11) Sampur tanks where Choku Mean and Nanku Mean are employing 70 daily.

Besides these works, there are many minor tanks being made.

Two ballast contractors, Joyti Prosad and Udoy Chandra Kabi, are employing about 250 persons daily.

During the period under report the sum of Rs. 1,250 has been advanced under the revised Rules for Land Improvement Loans.

4. No *poor-houses* have been opened.

5. No *organisation for relief of artisans*.

6. *Organisation for distribution of grain doles*.—The system adopted is the ticket system, which has already been reported on.

Tickets are now being issued more freely.

7. *Relief in kitchens*.—Nil.

8. Information regarding *loans for land improvement* has been given in paragraph 3 above.

9. The sum of Rs. 1,000 has been received from the Deputy Commissioner during the period under report.

The total amount received since the 1st April is Rs. 3,000.

Statement D, showing the expenditure, is submitted herewith.

I am not able to submit a map of the affected area, as no skeleton maps have yet been received from the Survey Office.

FAMINE STATEMENT E.

DISTRICT SONTHAL PARGANAS (SUBDIVISION JAMTARA).

Abstract Statement of relief works and gratuitous relief for the half-month ending 23rd April 1897.

WEEK.	A, B, C and D workers paid by task-work.				Workers paid by daily wages irrespective of task.		Total amount disbursed on task-work and daily labour.	Gratuitous relief.		Amount expended.
	Average number of male units per diem.	Work done per diem by each male unit.	Wage earned by each male unit per diem.	Cost per 1,000 cubic feet.	Average number of male units per diem.	Wage earned by each male unit per diem.		Number of adult unit in receipt of gratuitous relief.	Average dole.	
1	2	3	4	5	6	7	8	9	10	11
16th April 1897	1,208	0 ft.	Rs. A. P.	Rs. A. P.	57	Rs. A. P.	Rs. A. P.	(144(a)) (505(b))	0 8 5 ^(a) 0 0 9 ^(b)	75 13 3 24 3 3
23rd "	1,303	48	0 1 5	1 14 8	97	0 1 8	739 13 0	(150(a)) (555(b))	0 8 4 ^(a) 0 0 8 ^(b)	87 8 0 24 4 9

* The figures Rs. 0-3-5 and Rs. 0-0-4 shown in column 10, seem to be for the whole week. The Deputy Commissioner has again been requested to show the money value of the average daily dole per male unit in future.

(a) Relieved by grain doles.

(b) Ditto by money at relief works.

FORM No. 10.

R. CARSTAIRS,
 Deputy Commissioner.

No. 221F., dated Dumka, the 1st May 1897.

From—R. CANSTARS, Esq., Deputy Commissioner, Sonthal Parganas,
To—The Commissioner of the Bhagalpur Division and Sonthal Parganas.

I HAVE the honour to submit my report under sections 13 and 14 of the Famine Code for the half-month ending the 30th April 1897. I have submitted a separate report for Jamtara, and this report relates to tracts in which famine has not yet been declared. I have no reports from Rajmahal or Pakour, and the present report refers to Deoghar, Godda, and Dumka subdivisions. I shall also note such information as I have about Rajmahal and Pakour.

2. *General condition of the people.—Deoghar.*—The condition has become slightly worse owing to rise in the price of common rice. The Subdivisional Officer is on the watch and ready to open test work where required, but no test work has so far been frequented.

Godda.—No change is reported and no signs of distress have as yet appeared.

In Dumka distress is reported, but not so far general, and will be met, so far as we know, out of private and ordinary district expenditure.

In Rajmahal employment is wanted, but no one will accept test rates. So far as I can gather, the distress is so far among the landless classes chiefly. The Paharias will get relief from the sabai grass advances, which are made at this season, and estate improvement works have been sanctioned, which ought also to give useful relief.

In Pakour slight and partial distress is reported.

Generally we have arrived at a critical time when we must be on the alert and ready for any event.

3. *Prospect of crops.*—The only crop reported on the ground is sugarcane in Godda, which promises well. Ploughing has begun for the *bhadoi* and winter crops.

4. *Prices* are stationary in Godda and rising in Deoghar. The price of *mohara* is rising fast at Deoghar. Burma rice is imported to Deoghar bazar and sells for 9 seers the rupee.

5. *Food-stocks.*—These still seem to be sufficient, being replenished by private trade where necessary. The movement from the south of this district and from Birbhum to west and centre continues.

6. *Importation and exportation.*—The only movement with areas outside the district is from the north of Godda of gram and linseed. It is said some Indian-corn was imported to the affected tract of Godda from the Dumka side.

7. *Rainfall.*—The rainfall was about an inch more or less all over the district. Last evening and to-day it has been cloudy with partial showers. This helps fodder and water-supply, and enables ploughing for sowing to be done.

8. *Public health.*—Save for sporadic cases of cholera and small-pox, not more prevalent than usual, health is good.

9. *Emigration or immigration of famished people.*—The only movements reported is of raiyats from the Teor Taluk in Lachmipur. It is said that people continue to emigrate to the tea gardens, and that from five villages all the inhabitants, and from seven villages some 37 residents, have emigrated. It was probably those who were seen by me at Dumka, and some of them also by Mr. McGavin, passing through Rajmahal. It is not reported if they were famishing, or how many went from the five villages (villages in Teor are mostly small). I have directed enquiry. Mr. Braidwood has started works in that part of the Lachmipur property, and our road repairs now due will also give help.

There are 11,000 "villages" in the Sonthal Parganas many consisting of not more than five houses.

W. B. O.

Manager of the Lachmipur estate.

10. *Condition of cattle.*—Generally good; but fodder rather short at Deoghar, and cattle-pox broke out in the north of Godda.

11. *Number and nature of public works.*—No famine works have been opened, except in Jamtara.

The receipt of the road allotment and estate improvement fund has enabled me to arrange for works which will give considerable relief for a time. The work of excavating gravel for the main roads which lie in the Dumka and Deoghar subdivisions, and which is the largest single work we do with the road fund, is being arranged for as a relief work.

The gift of Rs. 6,000 from the Raja Bahadur of Hetampur was received on the 28th of April, and will be a very useful help in Mahammadabad and Kundahitkareya in the south of Dumka and east of Jamtara.

Numerous private works are also being done, the most active in this respect, so far as my information goes, being the Court of Wards, the Hendwai and Lachmipur estates, Rai Setap Chand Nahar Bahadur of Lakshanpur, and the Banaili Raj and Mr. Maling Grant whose arrangements are probably more complete than any.

12. *Relief under section 12.*—None was given.

13. *Application for loans.*—In Deoghar 137 were received and in Godda none was granted. Loans are also being asked for in Dumka and elsewhere.

The amount granted since the 1st April 1897 in loans this year up to date has been Rs. 1,835.

14. *General remarks.*—My work has been considerably dislocated by the resignation and departure of Babu Mohendra Nath Dagoji, the District Engineer. He was to have waited till relieved, but owing to illness he was, on the recommendation of the Civil Medical Officer, allowed to go.

As this is the critical time, I have issued instructions for a general and close inspection by all available officers of the condition of the district, and this watch will be kept up for the next two months as far as the time can be given. I have, to obtain time, suspended civil judicial work. I trust this will enable us to keep ourselves acquainted with actual facts.

I have got very little information of the result of this inspection, but I believe it has already had a good effect.

I have been pressing the District Charitable Committee to take action where required, and I believe there has been a general quickening of its energy and extension of its work. One result of Babu Chandra Narayan Gupta's deputation to Mahammadabad has been a local committee and local charitable subscriptions on that area alone—an example worthy of imitation.

OILSEED CROPS IN BENGAL.

The following is published for general information.

REV. DEPT.,
The 26th May 1897.

M. FINUCANE,
Secy. to the Govt. of Bengal.

DEPARTMENT OF LAND RECORDS AND AGRICULTURE, BENGAL.

Final Report on the Oilseed Crops of Bengal. 1896-97.

N.B.—Returns have been received from all districts except Shahabad, for which estimates of area and outturn have been reproduced from the preliminary forecast issued on the 22nd February 1897.

Explanatory.—This report gives estimates of the area and outturn of all oilseed crops grown in these Provinces. The chief of these are (1) rapeseed and mustard, (2) linseed, (3) til or gingelly, and (4) other oilseeds, *e.g.*, castor oil and *sirgusa* (niger oilseed), &c. Both varieties of til, viz., (a) the *bhadoi* variety, which is sown during the rains and reaped early in the cold weather, and (b) the *rabi* variety, which is sown in the cold weather and reaped shortly before the setting in of the rains, are included in the report.

2. **Character of the season.**—The character of the early part of the season was reviewed in the preliminary note on the oilseed crops issued on the 22nd February 1897. It may be thus summarized:—The monsoon rains of 1896 were deficient, and also ceased early, and drought followed, which lasted up to the third week of November. In December, there was no rain in Lower Bengal and Orissa; and only light rain fell in North Bengal, Bihar and Chota Nagpur during the last week of December. In January, also, rain was very light

throughout the Province. The estimates of area and outturn returned by District Officers for the preliminary forecast, showed the condition of the crop up to January. Fairly frequent showers fell during the first three weeks of February in Orissa, South-West Bengal and Chota Nagpur; and general light rain fell in Bihar and North Bengal during the second week of February. In March, the rainfall was above the normal in all districts of these Provinces. The excess in Orissa amounted to 2·62 inches, in North Bengal to 1·33 inches, in Chota Nagpur and Bihar to 1 inch, and in Lower Bengal to about $\frac{1}{2}$ inch. The most important showers were received between the 22nd and 24th, when general and heavy rain fell over the Province. In April, general but light showers were received throughout the month.

3. *Area cultivated*.—From the returns appended to this note, it will be seen that the total area cultivated with oilseeds this year is estimated at 3,633,200 acres against 4,203,300 acres estimated to have been sown in 1895-96. This gives a decrease of 570,100 acres, or 13·56 per cent. on the area sown last year. The decrease is due to want of moisture in the soil at the time of sowing. The figures given above do not quite agree with those shown in the forecast issued in February. Darjeeling, for which no returns were received for the first forecast, is included in the present report; and revised estimates have now been received from Burdwan, Nadia, Khulna, Mymensingh, Patna and Sonthal Parganas, which account for the slight difference.

4. *Character of the crop*.—Out of the 45 districts of these Provinces (inclusive of Shahabad, for which no final return has been received, but for which estimates of area and outturn have been reproduced from the preliminary forecast), only one district, viz., Dinajpur, estimates the outturn of the different kinds of oilseed crops, taken together, as 16 annas. Four districts, viz., Darbhanga, Purnea, Bogra and Gaya, return crops varying from 14 to less than 16 annas; seven districts, viz., Jalpaiguri, Rangpur, Champaran, Muzaffarpur, Monghyr, Bhagalpur and Malda, return crops varying from 12 to less than 14 annas. Thirteen districts, viz., Rajshahi, Darjeeling, Pabna, Dacca, Mymensingh, Backergunge, Tippera, Patna, Shahabad, Saran, Cuttack, Hazaribagh, Singhbhum, show crops varying from 8 annas to less than 12 annas, and the remaining 20 districts, viz., all the districts of the Burdwan and Presidency Divisions, Faridpur, Noakhali, Chittagong, Sonthal Parganas, Balasore, Angul and Khondmahals, Puri, Lohardaga, Palamau and Manbhum, return crops less than 8 annas. Manbhum shows only a $2\frac{1}{2}$ -anna crop, Chittagong a 3-anna crop, and Birbhum a $3\frac{1}{2}$ -anna crop. Sixteen districts return crops equal in outturn to those shown in the first forecast, 16 other districts report better crops, and 12 districts report worse crops. In the preliminary forecast, the prospects of the oilseed crops up to the latter part of January were estimated at 10 annas. The rains of February and March benefited the crop, and the outturn may be estimated at 11 annas. The oilseed crop of 1895-96 was estimated at $10\frac{1}{2}$ annas over a larger area cultivated.

5. *Gross outturn*.—Assuming, as in previous reports, 6 maunds per acre to be the average yield of linseed, rapeseed, and mustard, and $4\frac{1}{2}$ maunds per acre to be the average yield of *til* and other oilseeds, the gross outturn of all kinds of oilseed crops of these Provinces during the year under report amounts to 502,700 tons, against 558,700 tons estimated for the previous year.

N. N. BANERJEE,

*Assistant Director of Land Records
and Agriculture, Bengal.*

COUNTERSIGNED.

W. C. MACPHERSON,

*Director of Land Records and
Agriculture, Bengal.*

CALCUTTA,
The 15th May 1897.

APPENDIX A.
Final report on the Oilseed Crops of Bengal, 1896-97.

1	2	3	4	5	6	7	8	9	10
DIVISION.	District.	Names of oilseeds.	Approximate normal area under oilseeds.	Approximate area sown last year (1896-97).	Estimated area sown this year (1897-97).	Taking 10 annas to represent the average outturn per acre, how many annas represented outturn last year (1896-97)?	Taking 10 annas to represent the average outturn per acre, how many annas will represent this year's outturn (1897-97)?	Remarks by District Officers.	Remarks by the Department of Land Records and Agriculture, Bengal.
BUNDWAN.	Burdwan	Linseed ... and Rapeseed mustard. Til Other oilseeds ... Total ...	Acres. 23,300 17,900 9,300 7,700 57,200	Acres. 26,000 17,900 3,300 5,900 53,100	Acres. 25,600 14,400 5,000 5,700 50,700	Taking 10 annas to represent the average outturn per acre, how many annas represented outturn last year (1896-97)?	Taking 10 annas to represent the average outturn per acre, how many annas will represent this year's outturn (1897-97)?	Owing to scanty rainfall and consequent want of moisture in the soil, the outturn is less than that of last year. Continued want of rain has destroyed the crops. The season was exceptionally dry and not at all favourable for the cultivation and growth of these plants, and both the area and outturn were consequently affected during the year.	The Collector returned different figures for columns 4, 5 and 6 in the preliminary form- case.
	Birbhum	Linseed ... and Rapeseed mustard. Til ... Total ...	Acres. 1,000 3,000 500 4,500	Acres. 800 1,900 400 3,100	Acres. 200 200 100 500	Taking 10 annas to represent the average outturn per acre, how many annas represented outturn last year (1896-97)?	Taking 10 annas to represent the average outturn per acre, how many annas will represent this year's outturn (1897-97)?		
	Bankura	Linseed ... and Rapeseed mustard. Til ... Other oilseeds ... Total ...	Acres. 1,500 9,600 9,900 10,000	Acres. 1,100 3,600 3,300 8,000	Acres. 800 1,700 2,300 4,800	Taking 10 annas to represent the average outturn per acre, how many annas represented outturn last year (1896-97)?	Taking 10 annas to represent the average outturn per acre, how many annas will represent this year's outturn (1897-97)?		

1	2	3	4	5	6	7	8	9	10
DIVISION.	District.	Names of oilseeds.	Approximate normal area under oilseeds.	Approximate area sown last year (1896-97).	Estimated area sown this year (1896-97).	Taking 16 annas to represent the average outturn per acre, how many annas represented outturn last year (1896-97)?	Taking 16 annas to represent the average outturn per acre, how many annas will represent this year's outturn (1896-97)?	Remarks by District Officers.	Remarks by the Department of Land Records and Agriculture, Bengal.
Burdwan (Sonard).	Midnapore ..	Linseed " " and Rapeseed ..	Acres. 24,300 14,600	Acres. 11,700 22,400	Acres. 11,700 22,400	Annas. 9 9	Annas. 6 9	<p>The area brought under cultivation has been less than the normal area, and the area of last year in consequence of the total failure of rain at the sowing time. The outturn estimated in the first forecast has slightly improved owing to subsequent rain.</p> <p>The decrease in outturn is owing to the want of rainfall.</p> <p>The unusual decrease in the area sown this year is due to scanty rainfall at the sowing season. The same cause also accounts for the decrease in the estimated outturn of the crops.</p> <p>The increase of area shown under column 8 of the present return over that shown in the preliminary forecast is owing to the fact that some 644 lands which were cultivated this year with crops in the Sadar subdivision were omitted from the previous forecast. The slight difference in the outturn calls for no explanation.</p>

There is an increase of 1,000 acres in the area cultivated with rapeseed and mustard this year as compared with the area returned for the preliminary orated forecast.

Want of timely rainfall is the cause of decrease in the area sown and outturn estimated.

For want of rain lands ordinarily cultivated with paddy were grown with linseed and mustard hence there has been an increase over last year's area. For want of rain, there was less cultivation of all this year than in the past. The outturn of all kinds of oilseeds was less than that of the last year for want of rain

Total absence of rainfall has been the cause of further reduction of the estimate of outturn previously submitted (8 annas).

Deficiency of rainfall is the cause of the low outturn.

The fallowing in the outturn is due to drought.

The decrease in area and outturn is due to drought during the time of cultivation and sowing.

There is an increase of 1,000 acres in the area cultivated with rapeseed and mustard this year as compared with the area returned for the preliminary census forecast.

Want of timely rainfall is the cause of decrease in the area sown and outturn estimated.

For want of rain lands ordinarily cultivated with paddy were grown with linseed and mustard hence there has been an increase over last year's area. For want of rain, there was less cultivation of this year than in the last. The outturn of all kinds of oilseeds was less than that of the last year for want of rain.

Total absence of rainfall has been the cause of further reduction of the estimate of outturn previously submitted (8 annas).

Deficiency of rainfall is the cause of the low outturn.

The fall in the outturn is due to drought.

The decrease in area and outturn is due to drought during the time of cultivation and sowing.

The outturn is reported to have been as estimated in the first forecast.

The area sown is much less than usual principally on account of the great lack of moisture in the soil at the time of sowing. This also delayed sowings, and has resulted in an outturn below the average.

There has been no change since the submission of the preliminary forecast, and the same remark holds good.

The Madhubani and Samastipur estimates have been revised. The decrease in area sown is entirely in the Madhubani subdivision, where a little more than half the usual area was sown. In Samastipur more than the usual area was sown.

The decrease in area and outturn is due to deficient rain throughout the growing season.

The season was unfavourable to all the crops except "Pongee." There was no rain from 24th September last.

The decrease in the outturn is due to scanty rainfall.

The decrease in the area sown and the outturn this year is due to the early cessation of rain and want of moisture in the soil.

RESOLUTION ON THE ADMINISTRATION REPORT OF THE JAIL DEPARTMENT FOR THE YEAR 1896.

No. 102P.—D.

JAILS.

Dated Darjeeling, the 26th May 1897.

RESOLUTION.

READ—

The Report on the Administration of the Jail Department for the year 1896.

READ also—

The Reports for the years 1894 and 1895, and the orders of Government recorded thereon.

Surgeon-Lieutenant-Colonel D. W. D. Comins held charge of the Department from the 1st to the 6th January, from the 12th April to the 22nd September, and from the 23rd December to the end of the year. Mr. A. D. Larmore, Superintendent of the Alipore Central Jail, officiated as Inspector-General for the intervening periods. The report, which was due on the 15th April, was received in the Secretariat on the 21st idem. The Vital Statements Nos. XIV and XV and Judicial Statement No. VI have been revised in accordance with the orders of the Government of India in the Home Department, contained in their Resolutions, No. $\frac{3\text{-Jails}}{120-180}$, dated the 9th March 1896, and No. $\frac{12\text{-Jails}}{500-510}$, dated the 31st August 1896. The term "Third class district jail" has been substituted for that of "Intermediate jail" previously used.

2. *Judicial Statistics.*—The number and classification of jails remained the same as in the previous year. The total number of prisoners of all classes confined in the jails and subsidiary jails of the Province during 1896 and the preceding ten years is shown by the following table:—

	1896.	1897.	1898.	1899.	1900.	1901.	1902.	1903.	1904.	1905.	1906.
1	2	3	4	5	6	7	8	9	10	11	12
Number of prisoners of all classes in jails and subsidiary jails on the last day of previous year	15,076	14,629	13,310	13,985	15,048	15,311	16,609	17,794	17,530	16,823	16,907
Total number admitted during the year	77,066	75,664	81,136	84,037	80,969	87,975	95,523	91,842	91,740	85,987	92,701
Total	93,042	90,293	94,346	98,024	96,007	103,136	112,132	109,636	109,270	102,779	109,608
Total discharged	78,413	77,663	80,301	83,576	80,800	86,546	94,336	92,106	92,449	85,871	90,888
Balance at the end of the year	14,629	13,310	13,985	15,048	15,307	16,609	17,794	17,530	16,823	16,908	16,760
Daily average of all classes ...	14,906	12,250	13,731	15,026	14,777	15,916	17,180	17,794	17,344	16,929	17,499

The total number of prisoners admitted increased from 85,957 to 92,701, and the daily average population of all classes from 16,929 to 17,499. Apart from special causes in particular districts, the scarcity which has prevailed for so many months apparently contributed to this increase. The number of convicts admitted direct rose from 33,246 to 35,843, the largest increase occurring in the Backergunge (517), Mymensingh (310), Champaran (284), and Gaya (239) districts.

The following table shows the districts with the highest ratio of convictions per mille of population:—

District.	Population.	Number of convictions.	Ratio per mille of population.
1	2	3	4
Calcutta ...	681,560	2,301	2·97
Darjeeling ...	223,314	297	1·32
24 Parganas ...	1,892,033	1,797	·94
Backergunge ...	2,153,965	1,834	·85
Singhbhum ...	545,488	444	·81
Birbhum ...	797,833	625	·78
Faridpur ...	1,823,543	1,384	75
Hooghly (with Howrah) ...	1,797,921	1,231	·68
Monghyr ...	2,036,021	1,199	·58

The lowest ratio is shown by Purnea (·25), Darbhanga (·23), and Dinajpur (·22).

3. *Releases*—The following table compares the number of releases under the various heads during the past eight years:—

	1889.	1890.	1891.	1892.	1893.	1894.	1895.	1896.
1	2	3	4	5	6	7	8	9
Released on expiry of sentence ...	24,754	28,464	28,878	32,543	33,046	29,169	25,907	20,867
.. on appeal ...	1,043	2,038	2,120	2,156	1,931	1,977	1,911	1,733
.. under remission rules ...	1,575	1,622	1,661	1,624	1,771	4,529	4,971	5,000
.. on medical grounds ...	37	39	105	140	44	67	57	57*
.. on other grounds ...	2	9	8	6	9	5	...	8

* Excluding 4 moribund prisoners who were released under Rule 504c of the Jail Code, and included as deaths.

The larger number of convicts passing through the jails accounts for the increase under the head "On expiry of sentence." The ratio per cent. of prisoners released on appeal (4·83) shows a satisfactory decrease as compared with the ratio for the previous year (5·72); but the figures for Bogra (11·49), Shahabad (12·44) and Burdwan (19·52) are very high, and in the case of the last named district demand the attention of the District Magistrate. The number of prisoners transported from Bengal jails rose from 85 in 1895 to 116, of whom two were women. Twenty-one death-sentences were carried out, as compared with 11 in 1895 and 20 in 1894.

4. *Classification of convicts*.—The number of Burman convicts in the Bengal jails on the 31st December 1896 was 287, against 332 at the close of the preceding year. One Burman prisoner in the Jessore Jail was sentenced to transportation for life for attempt to murder. The health and behaviour of these prisoners are reported to have been fairly good. Of the 35,813 convicts admitted direct into jail, 20,072, or 56 per cent., were Hindus, 14,166, or 39·53 per cent., Muhammadans, 383, or 1·08 per cent., Christians, and 116, or ·30 per cent., Buddhists. The number of juvenile offenders admitted rose from 344 to 402, of whom 350 were males and 52 females. The Reformatory Schools at Alipore and Hazaribagh remained nearly full throughout the year. A slight increase occurred in the proportion of female convicts admitted into the Jails, the ratio per cent. of total admissions being 3·7, against 3·3 in 1895. From the statistics of previous occupation it appears that the proportion of cultivators to other classes admitted into jail has fallen from 63·44 per cent. in 1891 to 58·99 per cent. in 1895 and 52·87 per cent. in the past year.

The following table classifies the convicts admitted direct into jail according to length of sentence, showing the percentage on the total number sentenced for each class respectively:—

LENGTH OF SENTENCE.	1895.		1896.	
	Number of admissions.	Ratio per cent. to total number sentenced.	Number of admissions.	Ratio per cent. to total number sentenced.
1	2	3	4	5
Not exceeding one month ...	11,333	34.1	11,742	32.8
Over one month and not exceeding three months	7,611	22.9	8,082	22.4
„ three months ditto six „	5,762	17.3	6,359	17.7
„ six „ ditto one year	4,591	13.9	5,486	15.3
„ one year ditto two years	2,162	6.5	2,347	6.6
„ two years ditto five „	1,165	3.5	1,206	3.4
„ five „ ditto ten „	353	1.1	419	1.2
„ ten „ ...	9	.0	7	.0
Transportation for life ...	166	.5	151	.4
Ditto for a term ...	49	.1	52	.1
Sentenced to death ...	45	.1	42	.1
Total ...	33,246	100.0	35,843	100.0

The number of sentences of simple imprisonment and of rigorous imprisonment was 2,423 and 33,420 respectively, as compared with 2,287 and 30,959 in 1895; while the number of sentences of rigorous imprisonment with whipping rose from 182 to 277.

5. *Reconvictions.*—There were 4,436 reconvictions, or 13.10 per cent., against 3,843, or 11.55 per cent., in 1895. Of this number, 334 were identified as previously convicted by means of the Bertillon system of anthropometry, the number thus traced in 1895 being 207. Every assistance was given to the Police Department in the measurement of police-registered prisoners. The number of sentences for bad livelihood rose again from 2,129 to 2,245. The number of judicial whippings was 2,226, against 1,930 in 1895 and 2,341 in 1894. Of these, 74 per cent. were inflicted in cases of theft. The returns show the age of ten prisoners subjected to judicial flogging as having been between 45 and 50 years of age. The Magistrates may in some of these cases have considered the ages to be less than 45, but, in order to avoid any possible irregularity in future, the attention of all magisterial officers has recently been directed to section 393 (c) of the Code of Criminal Procedure, which prohibits the whipping of persons whose age appears to the Court to exceed 45 years.

6. *Under-trial prisoners.*—The number of under-trial prisoners admitted increased from 31,211 to 34,340. Of this number and those remaining in jail from the close of the preceding year, 17,724, or 50.04 per cent., were convicted, and 13,794, or 38.92 per cent., released, against 47.28 per cent. convicted and 42.26 per cent. released in 1895. The mortality among under-trial prisoners again shows a satisfactory decrease, the number of deaths being 40 as compared with 45 in 1895 and 61 in 1894. Nine under-trial prisoners escaped during the year, of whom six were recaptured, against five escapes and three recaptures in 1895. The Lieutenant-Governor has again to notice with dissatisfaction the figures showing the average detention of under-trial prisoners, which exceed those for 1895, commented on in last year's Resolution. The detention in Sessions trials has increased from 39.70 days in 1892 to 46.01 days in 1896; while the returns for magisterial Courts (13.77 days) are the worst since figures have been separately given for these cases. In the

16 districts shown in the following table the average detention was more than 15 days:—

District.	AVERAGE DETENTION IN DAYS.		
	1896.	1895.	1894.
1	2	3	4
Darjeeling ...	40·56	3·64	7·38
Saran ...	20·53	22·52	14·31
Balasore ...	20·01	10·02	7·55
Champaran ...	19·70	25·27	12·48
Dinajpur ...	19·31	18·11	27·22
Noakhali ...	18·24	11·88	13·43
Dacca ...	17·87	12·24	13·57
Faridpur ...	17·67	14·55	13·03
Lohardaga ...	17·48	23·45	14·51
Burdwan ...	17·00	14·10	14·45
Rangpur ...	16·35	13·75	12·50
Hughly ...	15·94	19·02	14·80
Backergunge ...	15·85	22·03	15·67
Tippersa ...	15·57	16·20	13·21
Birbhum ...	15·52	12·22	9·26
Hazaribagh ...	15·25	11·53	7·65

The attention of the District Officers is drawn to these figures. An improvement can be secured only by close supervision over the subordinate Magistrates, and such supervision should be constantly exercised. An explanation will be called for as to the extraordinary rise in the Darjeeling figures. Detention was shortest in Pabna (3·43 days), Jessore (8·02 days), and the Sonthal Parganas (8·82 days).

7. *Civil and State prisoners.*—On the last day of 1895, 61 civil prisoners remained in confinement, and 856 were admitted during 1896, making a total of 917. Of these nine were transferred and 849 released, leaving 59 confined at the end of the year. The Lushai Chief, Lalthuama, who was confined in the Chittagong Jail, was transferred, on the 18th March 1896, to Rangamati, and there released. Of the four State prisoners received from Madras who were under confinement during the year, one was transferred to Hazaribagh for the benefit of his health, two are reported to have enjoyed fair health, and the remaining one good health. They are all well cared for.

8. *Jail buildings.*—The total expenditure upon major and minor works and repairs in all jails during the year amounted to Rs. 1,54,464. The most important major works included in the list of projects for the year were the construction of additional wards in the Bhagalpur, Buxar and Hazaribagh Central Jails, and of a new jail at Halursingha, and certain additions and alterations to the main ward and hospital in the Presidency Jail. Extensive improvements in the Rangpur and Comilla jails were also undertaken, and an installation of electric light was completed in the Alipore Jail at a cost of Rs. 31,685. A sum of Rs. 18,995 was spent on minor works. Twenty cubicles were completed during the year in the Jessore Jail, twenty at Bhagalpur, and twenty-four at Hazaribagh; and a sum of nearly Rs. 16,000 was expended on installations of the Pasteur-Chamberland filter at Motihari, Chaibassa, Bankipore, Jalpaiguri, Bogra, Dinajpur, and Rangpur.

9. *Guards and escapes.*—The warder guard consisted of 233 head warders, 1,877 warders, including 47 warder recruits, and 112 apprentice warders. Owing to the scarcity and high prices there has been less difficulty, the Inspector General reports, in recruiting warders of good stamp, and young warders were more inclined to remain in the service. In the report

for the year 1895, the Inspector-General adverted to the necessity for further improving the pay and prospects of the warder staff, and His Honour expressed his readiness to consider any representation that might be put forward. During the past year the dearness of food-grains brought this question into prominence, and some discontent was felt among the staff, until it was announced that Government intended to allow compensation for provisions with retrospective effect from July 1896. Dr. Comins now says that, in view of the orders for compensation, the question of increasing the pay of the warder staff has not been pressed. The system of drilling with the regular police force was discontinued during the year in accordance with the order of this Government, No. 106P.D., dated 13th June 1896.

During the year female warders were appointed⁴ for the remaining 6 of the 15 jails, for which they were sanctioned in the order of this Government, No. 2299P.—Jails, dated the 5th August 1895.

The number of criminal offences committed by warders was the same as in the previous year (37), while departmental offences rose from 1,701 to 1,794. A spirit of insubordination is said to have been evinced in the Midnapore Jail, which had to be suppressed by severe measures. At Ranchi a combination among the warders was detected, to which is attributed an outbreak of theft in the jail.

The number of escapes among convicts decreased from 23 in 1895 to 13, of which 6 were effected from inside the jails and 7 from outside. Nine of the prisoners were recaptured during the year, besides 3 others who had escaped in previous years.

10. *Prison discipline.*—The table below shows the nature of offences committed by convicts during the year, as compared with 1895:—

1	2	3	4										5
	Daily average population.	Offences dealt with by Criminal Courts.	OFFENCES DEALT WITH BY SUPERINTENDENT.										
			A		B		C		D		E		F
			Relating to work.		Relating to prohibited articles.		Relating to assaults, mutiny, and escapes.		All other breaches of jail rules.		Total.		GRAND TOTAL.
			Dealt with by minor punishment.	Dealt with by major punishment.	Dealt with by minor punishment.	Dealt with by major punishment.	Dealt with by minor punishment.	Dealt with by major punishment.	Dealt with by minor punishment.	Dealt with by major punishment.	Dealt with by minor punishment.	Dealt with by major punishment.	
1896	15,895	38	15,190	1,150	2,938	711	417	109	12,417	1,122	22,898	2,192	25,548
1895	15,830	61	17,722	1,750	2,661	692	429	279	12,515	967	24,615	2,678	26,293

During the past four years offences dealt with by Criminal Courts have fallen from 61 to 38, offences relating to work from 24,799 to 16,340, and the total offences from 45,076 to 35,548. Under the orders contained in the Home Department Resolution No. —^{10-Jails}₈₁₀₋₂₈₂, dated the 9th November 1892, warnings are now included among the punishments shown in the report. Excluding offences dealt with by warning, the number of punishments awarded in the past year was 26,870, the lowest figure reached since 1890, and less than half the number returned in 1880, when there were 62,008 punishments.

The number of whippings inflicted was 223, as compared with 185 in 1895, and 277 in 1894. The highest proportion per cent. of whippings to total punishments is shown by the Darjeeling (4·16), Dumka (3·26), Rangpur (1·97), and Dinajpur (1·75) jails. In 11 jails corporal punishment was not inflicted. The number of prisoners punished with fetters fell from 7,928 in 1895 to 7,708.

11. *Convict officers, mark remissions, &c.*—A daily average of 952 male and 17 female convict officers were employed during the year, against 949 and 15, respectively, in 1895. The number of prisoners released under the mark system during the year was 5,090, as compared with 4,971 in 1895. The system applies to prisoners with sentences of one year or upwards, who are mostly confined in the Central Jails. Its effect on the conduct of the prisoners depends to a large extent, as Dr. Comins points out, on the intelligence and education of the convicts, and the term of their imprisonment which remains unexpired. Intelligent and partially educated convicts understand more readily the benefit they derive from earning marks. Long-term prisoners, again, when approaching the end of their sentence, become alive to the advantage of earning good conduct marks; but short-term prisoners and those who are only commencing a long period of confinement will not, it is said, behave better, nor be deterred from offences against jail discipline, through the fear of losing marks.

Relief was granted from the Claude Martin Fund to 1,530 prisoners on release.

12. *Expenditure.*—The gross expenditure on jails and subsidiary jails during the year, as compared with the expenditure in 1895, is shown below:—

Heading.			1895.	1896.
			Rs.	Rs.
Establishment	4,75,883	4,70,216
Dietary charges	4,56,975	5,00,470
Hospital charges	83,760	92,061
Clothing and bedding	67,275	79,866
Sanitation charges	27,564	27,019
Moving prisoners	44,728	46,065
Miscellaneous services and supplies	50,606	65,050
Travelling allowances	5,856	6,350
Contingencies	32,772	41,342
Charges on live-stock, tools and plant	19,234	22,301
Petty construction and repairs	24,248	28,257
General supervision	66,214	59,142
Total			13,55,115	14,38,139
Public Works Department			1,23,086	1,54,464

The increase is chiefly under the head "Dietary charges," and is due to the larger population and the higher prices paid for food-grains. The rise in prices consequent on the failure of the crops was felt during a portion of the year. Excluding Public Works charges from consideration, the average cost per prisoner rose from Rs. 80-1-0 to Rs. 82-3-2.

13. *Average prices of articles of diet.*—The following table shows the average rates paid for the principal articles of diet in 1896, as compared with the corresponding rates during the five preceding years:—

	1896.	1895.	1894.	1893.	1892.	1891.
1	2	3	4	5	6	7
	Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.
Rice	3 6 11	2 5 0	2 9 4	2 10 8	2 9 1	2 1 9
Wheat (flour)	4 3 0	3 1 5	3 7 4	2 4 3	3 10 7	2 1 7
Maize	2 3 7	1 13 10	1 12 6	1 12 7	1 12 5	2 0 0
Dal	2 14 0	2 13 4	2 8 8	2 8 10	2 11 9	2 7 8
Meat	8 12 7	7 7 11	6 8 0	6 10 8	6 8 10	6 6 7
Fish	7 9 9	7 7 2	6 14 8	6 5 8	6 7 6	6 4 8
Salt	3 11 10	3 11 7	3 13 7	3 11 8	3 11 0	3 12 8

A rise in price, as compared with 1895, thus occurred in every article. The rates of wheat, maize, dal, fish and meat were higher than they had been during any of the previous ten years.

14. The following statement compares the expenditure per prisoner on diet in each jail during the past two years:—

JAILS.	1905.	1906.	JAILS.	1905.	1906.	JAILS.	1905.	1906.

						Average	25 7 6	25 15 2

The first three jails on the list have occupied the same position for the last three years. The large increase in cost at Hooghly is said to be due to a more expensive diet having been introduced in the latter part of 1895, and to the purchase of vegetables. At Dinajpur the rise is ascribed to a liberal diet combined with high prices. The judicious purchase of grain in bulk at the cheapest season, and the possession of a stock bought at cheap rates in 1895, have enabled some thirteen jails to show a decrease in the cost per prisoner. The most satisfactory result was attained in Mymensingh, where a reduction of more than Rs. 11 in average cost was effected by the foresight of the Superintendent and Jailer. The decrease at Jessore and Khulna is also very satisfactory. The total value of vegetables and other products obtained from jail gardens and dairies shows a decrease from Rs. 1,08,147 in 1895 to Rs. 1,02,562, although gardening outside the jails is being encouraged, and extra ground acquired for the purpose from time to time. The decrease is attributable to the short rainfall of the year, and the further abandonment of gardens within the jail walls, which were usually carried on in highly manured soil. The total cost of establishment fell from Rs. 4,12,369 to Rs. 4,07,442. Sanitation charges remained nearly the same.

15. The table below shows the average cost per prisoner in each jail, calculated on the expenditure under the three controllable heads of "Diet," "Hospital charges" and "Clothing," and the death-rate per mille of all admissions, together with the average cost per prisoner and the death-rate of all the jails collectively:—

JAILS.	Average cost per prisoner during 1906.	Death-rate per mille of daily average strength of convicts and undertrial prisoners.	JAILS.	Average cost per prisoner during 1906.	Death-rate per mille of daily average strength of convicts and undertrial prisoners.

No relation is shown by this table to exist between the death-rate and the average expenditure incurred on each prisoner.

16. *Employment of prisoners and manufactures.*—The daily average number of prisoners under sentence of labour on working days was 15,696 as compared with 15,352 in 1895. The average number sick, convalescent or infirm rose slightly, from 2,034 to 2,093, while the number on unremunerative labour fell from 1,013 to 919. The average number employed on manufactures rose from 5,744 to 6,001, and the percentage of convicts thus employed to the total number sentenced to labour from 37.41 to 38.86. The net profits from manufactures rose from Rs. 4,16,810 to Rs. 5,13,295; and the average profit per head sentenced to labour from Rs. 27.2 to Rs. 32.11. This increase is chiefly due to the original value of the existing stock of the Presidency Jail Press having been raised by Rs. 76,863 at the last stock taking. Statement XII (a) of the net cash earnings of convicts in the different jails need not be furnished in future reports.

The average number of prisoners employed by the Public Works Department and by District Boards and Municipalities fell from 174 to 147. Since the close of the year the orders regarding the extramural employment of prisoners have been revised, so as to bring them into more strict accord with the instructions contained in the Home Department Resolution, No. 10—605-18, dated the 7th May 1886.

17. *Average earnings in Central Jails.*—The following table compares the average earnings per prisoner sentenced to labour in central jails during the past two years:—

			1895.	1896.
			Rs. A.	Rs. A.
Presidency	92 10	86 3
Buxar	80 8	83 3
Alipore	50 11	49 3
Bhagalpur	20 13	26 13
Midnapore	24 12	23 14
Dacca	10 10	23 9
Rampur Boalia	8 14	6 2
Hazaribagh	7 13	6 2

In the Presidency Jail the convicts admitted to the press in bad and indifferent health increased by a daily average of 41, and, as a result, 22 hand-presses were idle, sufficient convicts in good health not being available to work them. The decrease in net profits is due to this cause. The results obtained in the Buxar Jail are again very satisfactory, and creditable to Mr. Emerson, the Superintendent, and Babu Nauranga Marwari, Officiating Deputy Superintendent in immediate charge of the factory, the profits being Rs. 91,334 against Rs. 83,817 in 1895. This is chiefly due to the expansion of the tent industry in consequence of extensive orders received from the Ordnance Departments. The total number of tents issued from the jail was 1,912, as compared with 1,359 in 1895 and 719 in 1894. The falling off in the profits at the Alipore Jail, from Rs. 83,479 to Rs. 73,718, is due to the fact that the jute mill was idle for some four months of the year, while a new engine imported from England was being erected. The blanket industry of the Bhagalpur Jail has been further extended during the year, and the profits from manufactures in the jail rose from Rs. 24,657 to Rs. 31,541. A new engine sanctioned during the year is shortly expected. The Midnapore, Rampur Boalia and Hazaribagh Jails show a decrease in profits. At Dacca the manufacture of chaukidari uniforms has been most successfully prosecuted owing to the efforts of the Superintendent, Mr. Beadon; and the profits earned have in consequence increased from Rs. 11,371 to Rs. 24,047. The ordinary profits of the district jails rose from Rs. 71,859 to Rs. 79,904, the average cash earnings being again largest in the Darjeeling Jail, where broad-making is the principal industry carried on.

18. *Quinine and its distribution*.—The filling and distribution of pice packets of quinine continued to be carried on at the Alipore Jail, 3,776,958 powders being prepared and packed during the year, as compared with 3,760,434 in 1895. The profit amounted to Rs. 6,128 against Rs. 8,208 in the previous year, the decrease being due to the provision of better envelopes and the grant of a higher sale commission on tins of 12 packets and over, where sales are heavy, in conformity with the instructions contained in paragraph 23 of this Government Resolution No. 106P.D., dated the 3rd June 1895. The total sales amounted to Rs. 51,595, as compared with Rs. 49,390 in 1895. Of this sum, Rs. 6,698 represents the value of packets supplied to officers in other Provinces. Under the orders of this Government contained in the Municipal Department letter, No. 874T.M., dated the 5th October 1896, the supply of quinine to other Provinces, which was temporarily stopped in the beginning of that year, has been re-introduced.

19. *Subsidiary Jails*.—The number of subsidiary jails and the arrangements for supervision and guard remained the same during the year. Explanations will be called for from those Superintendents who neglected to make the prescribed number of visits. The total expenditure on subsidiary jail buildings was Rs. 5,632, against Rs. 13,184 in 1895. There was no subsidiary jail under construction during the year. The number of convicts admitted direct, which had fallen from 17,385 in 1892 to 15,072 in 1895, rose again to 16,275. The average detention among convicts was 7.45 days, or almost the same as in the two preceding years. Eleven convicts, or 32.1 per mille of the average daily population, died. The total number of under-trial prisoners admitted during the year rose from 13,782 to 15,981, the highest figure reached during the past eighteen years. As in the district and central jails the average detention of under-trial prisoners has again risen (from 12.61 days to 13.07 days). The returns from Jahanabad in Hooghly (22.72), Sasaram (21.13), and Kurigaon (20.27) are specially unsatisfactory. Sixteen civil prisoners were admitted during the year, against 19 in 1895. Of 8 convicts who escaped from subsidiary jails 6 were recaptured during the year, and of 9 under-trial prisoners who escaped 6 were again caught. The total expenditure on subsidiary jails amounted to Rs. 1,20,200, against Rs. 1,21,549 in 1895, and the average cost per prisoner, exclusive of petty construction and public works charges, amounted to Rs. 117-0-1, as compared with Rs. 128-6-10 in 1895, and with Rs. 74-14-8 in the case of district and central jails.

20. *Accommodation and food*.—The central, district and intermediate jails of the Province are now capable of accommodating 17,865 convicts, 1,107 under-trial prisoners, and 347 civil prisoners, or a grand total of 19,319. In consequence of the increase in the average daily population, the ordinary sanctioned sleeping accommodation for convicts was insufficient in seven jails, and temporary accommodation had to be provided for the excess of prisoners. Similarly, the capacity of under-trial wards was exceeded at times in several jails, and temporary arrangements were made. The subjects of food supply and dieting continued to receive careful attention during the year. Dr. Comins especially refers to the efforts made by Drs. Gregg, Whitwell, Nott, and Buchanan to promote the standard of health in the jails under their charge. In all jails the dieting of weakly prisoners has been a subject of special care. The Inspector-General cites the result obtained at Hazaribagh as an example of what can be effected. Out of the 1,000 prisoners confined in this jail, at least 600 are malaria-stricken or enfeebled men, who have been sent there for the benefit of their health. This unusual number of weakly and old prisoners have, however, been so well cared for, and the dietary arrangements and sanitation have been so well supervised by the Superintendent. Dr. Nott, that the weakly prisoner gangs contained in January 1897 only 213 prisoners, or 19 per cent. of the total population of the jail. The death-rate has not been above the averaged death-rate of the Province; and the cost of dieting and the hospital charges combined, notwithstanding the very high prices prevailing in the district and the increased population of the jail, was below that of many jails more favourably situated. Dr. Comins commends cultivation of potatoes, onions and English vegetables. "But in place of these," he writes, "it is too much the practice to grow *sāgs* (potherbs), gourda, and other worthless green stuff, which have no nutritive or antiscorbutic properties." He

has circulated instructions as to the best methods of cultivating the China cabbage (*Brassica chinensis*) at different seasons of the year, as this vegetable possesses many qualities that make it suitable for cultivation in jail gardens.

21. *Water-supply.*—The sum of Rs. 12,500 was allotted during the year for the water-supply scheme for the Buxar Central Jail, which includes the raising of water from the main stream of the Ganges by a powerful pump travelling on rails to meet the varying height of the water level, introduction to settling and disinfection tanks by pipes, filtration, boiling, cooling and distribution by pipe to hydrants. The work is reported to be now well advanced, and it is expected to be completed during the current year. The arrangements for supplying the Monghyr Jail with water from the Ganges by pump and pipe were completed during the year. The following allotments were also made for the improvement of the water-supply at the places named:—Hazaribagh, Rs. 5,000; Alipore, Rs. 2,281; Bhagalpur, Rs. 2,150; Comilla, Rs. 1,907; and Gaya, Rs. 600. The supply of Pasteur Chamberland filters is a noteworthy improvement in the jails of the province. Already seven jails have these filters in use, and provision has been made for their introduction into several others during the current year. Of the jails generally the Inspector-General remarks:—"The arrangements for the supply of pure water include settlement, disinfection by permanganate of potassium, filtration, boiling, cooling and distribution by pipes, and are being gradually completed as funds are available, but every jail has, in boiling, at least one means of effective sterilization." Dr. Comins acknowledges the services rendered by Surgeon-Major L. A. Waddell, Chemical Examiner to Government, Brigade-Surgeon-Lieutenant-Colonel D. D. Cunningham, and Dr. W. J. Simpson by their chemical and bacteriological examinations of water for the Department.

22. In accordance with the suggestion contained in paragraph 2 of the Home Department letter, No. ^{4-Jails}₂₄₉, dated the 27th June 1895, the following table showing the average weights of prisoners has been compiled from the figures furnished by the Medical Officers of the central jails:—

Height.	Scale of weight prepared by Dr. Buchanan, of Bhagalpur Central Jail.	Alipore.	Presidency.	Buxar.	Midnapore.	Rampur Hoole.	Dacca.	Hazaribagh.	Average for seven jails (columns 2 to 9).	Total number of prisoners weighed.
1	2	3	4	5	6	7	8		10	11
Ft. In.	lbs.	lbs.	lbs.	lbs.	lbs.	lbs.	lbs.	lbs.	lbs.	
5 0	88	100.5	101.3	103	101.3	100	88.5	97.5	100.3	433
5 1	100	104.7	106.0	105	103.5	102	101.5	104.0	103.3	634
5 2	103	106.5	106.4	108	105.3	104	103.9	104.3	105.9	1,103
5 3	106	111.4	113.5	111	110	107	105.3	107.6	109.4	1,363
5 4	108	112.8	116.1	113	112.2	111	106.7	111.2	112.1	1,353
5 5	112	116.2	119.5	116	113.5	111	111.4	113.0	114.8	1,106
5 6	115	120.9	120.2	119	115	118	115.5	117.8	118.4	530
5 7	118	122.4	127.4	124	121.5	120	117.5	119.8	121.8	536
5 8	122	126.7	129.9	126	126	121	123.5	126.0	125.3	265
5 9	128	131.8	134.4	129	118	129	128.9	136.2	128.1	166
5 10	132	130	130.2	130	130	133	109	130.3	127.3	53
5 11 and over.	134 to 138	125	160.5	131 to 144	118.5	26

It will be seen from the statement that the average weights, according to each height limit, generally vary from those calculated by Dr. Buchanan at the Bhagalpur Central Jail, his figures being in most cases exceeded.

Sanitary improvements of various kinds have been carried out in most of the jails by the provision of better ventilation, by lowering or throwing back enclosure walls, by the substitution of a better class of latrine, by the acquisition of land outside the jails for the cultivation of vegetables, and by the substitution of lime-washing for the primitive method of cowdung washing. Encouragement has been given to Civil Hospital Assistants attached to the Jails by the distribution of Rs. 4,986 as gratuities among 54 of them whose work has shown the most satisfactory results.

23. *Sickness and Mortality.*—The following table shows the mortality among prisoners for each year, as well as for each decade, from 1844 to 1896:—

YEAR.	Daily average number of prisoners.	Daily average sick.	Ratio per mille of daily sick.	NUMBER OF DEATHS—			DEATH-RATE PER MILE OF AVERAGE STRENGTH—			REMARKS.
				From cholera.	From all other causes.	Total number of deaths.	From cholera.	From all other causes.	From all causes.

The reduction of mortality shown by the figures of 1895 has been maintained. Exclusive of deaths from cholera, the death-rate per mille of the average population (25.0) is the lowest hitherto recorded. Although the reports of the District Medical Officers show that the year 1896, especially during the first six months, was not so healthy as 1895, owing to the prevalence of fever, bowel-diseases, influenza and measles, the health of the prisoners in the jails was well preserved. The highest death-rate is shown by Daltonganj

(168 per mille) and Darbhanga (106 per mille). In the Presidency (European), Khulna, Darjeeling and Noakhali jails, no death occurred.

The ratio of daily average sick per mille to daily average population among convicts decreased from 43·5 to 30·6. The jails which returned the highest average in this respect were Dinajpur (90·2), Purnea (86·5), Chapra (88·6), and Dacca (70·8). Dinajpur is always one of the most unhealthy districts in Bengal, and in 1896 appears to have been worse than usual. In Purnea the public health was also worse. The district in which the Chapra Jail is situated is said to have been very unhealthy, and the Civil Surgeon has for some years reported that malarial diseases are becoming more frequent and severe. At Dacca the high rate of daily average sick is due to influenza which caused a widespread condition of debility and depressed health. The public health of the Dacca district was unusually bad, and the death-rate $2\frac{1}{2}$ times that of the jail. The first three are jails which are kept depleted and from which prisoners are transferred for the benefit of their health on account of the known unhealthiness of the districts.

24. *Principal diseases causing sickness and death.*—Owing to the alterations in the form of Statement No. XV (showing admissions and deaths from the chief diseases), it has not been practicable to compare the statistics under each head for the years 1895 and 1896. The table below shows the principal diseases from which prisoners suffered during the past year:—

	Admissions.	Deaths.
Malarial fever	4,643	58
Dysentery	3,692	114
Other diseases of group A, sub-group I, including small-pox, mumps, simple continued fever, &c.	3,059	17
Diarrhœa	1,598	19
Abscess, boils and ulcers of all kinds	1,010	4
Other respiratory diseases, other than pneumonia, tubercle of lungs, &c.	576	9
Pneumonia	257	46
Anæmia and general debility	234	20
Tubercle of lungs, hæmoptysis and pneumonia, phthisis	165	53
Cholera	112	60

The prophylactic treatment of malarial diseases by daily doses of sulphate of cinchonidine, combined with the sulphate, or the tincture of the perchloride, of iron, was continued during 1896. In several cases the Medical Officers have reported that no result was observable; but the majority consider that the treatment has been beneficial, and that the number of cases of intermittent and remittent fever has diminished. Dr. Meadows (Cuttack) speaks of the treatment as extremely valuable, and ascribes to it the comparative immunity of the prisoners in his jail from dysentery. At the Bankura Jail a series of experiments was carried on by Dr. Green, who states that no markedly beneficial results are observable in the incidence of bowel-disease, but that the liability to malarial fever has much decreased.

Dysentery and diarrhœa accounted for 5,291 admissions to hospital and 134 deaths, as compared with 5,666 admissions and 155 deaths in 1895. Dysentery was both less frequent and less fatal during the year. The largest mortality from this disease occurred in the Midnapore and Alipore Central Jails, and the Chapra, Dinajpur, Comilla and Purnea District Jails.

Admissions and deaths from anæmia and debility decreased from 546 admissions and 30 deaths to 234 admissions with 20 deaths.

Deaths from cholera rose from 26 to 60, owing chiefly to two severe outbreaks that occurred in the Darbhanga and Bankipore Jails. At Darbhanga the disease was introduced through some convicts drinking water of a tank outside the jail, which, on examination, was found to be teeming with *comma bacilli*. Dr. Comins gives the following description of this outbreak and of the results of inoculation:—

“The outbreak lasted from 31st March to 15th April. On hearing of the outbreak, Professor Haffkine, who happened to be in Calcutta, started the same night for Darbhanga, and the next day inoculated 86 prisoners out of 160 who were in camp. No compulsion was used, nor was any reward offered to induce the prisoners to come forward; the prisoners were eager for the operation, and those passed over for want of sufficient virus considered themselves badly used. Professor Haffkine also inoculated 25 out of 53 prisoners remaining in the jail. Eleven cases of cholera occurred in camp after Professor Haffkine’s visit, of which 8 occurred in prisoners who had not been inoculated. As the number of the inoculated and

uninoculated was about the same, this is strong presumptive evidence in favour of inoculation, especially as all the uninoculated prisoners died, whereas only one died of the three inoculated prisoners. All the eight cases in camp among the uninoculated after Professor Haffkine's visit occurred within a few hours of the time of the inoculation of the other prisoners, whereas the earliest of the three cases among the inoculated occurred on the third day after inoculation and the last on the fourth day. The immunity of those inoculated is not more remarkable than the immediate increase in the number of attacks among those not inoculated. No such definite results were observed among those inoculated in the jail. Of 53 prisoners, 25 were inoculated. There were five attacks among these 53 prisoners after the time of inoculation, two being inoculated and three uninoculated. All these five prisoners died."

At Bankipore the disease first broke out on the 24th May, and lasted till the 5th June. Altogether there were 20 cases of cholera and 38 of choleraic diarrhoea, and 15 prisoners died. Most of the prisoners were moved into camp, and 113 were inoculated by Professor Haffkine; but the results in this case were not such as to show that increased immunity was given by the inoculation. The cause of this outbreak could not be traced, but cholera was very prevalent at the time in the town.

The total number of deaths among convicts in jails and subsidiary jails [including four moribund prisoners released under Rule 504 (a) of the Jail Code] was 461, against 418 in 1895 and 754 in 1894. Of the 450 convicts who died in jails, 125, or 277·8 per mille, were received into jail in good health, 165, or 366·7 per mille, in indifferent health, and 160, or 355·5 per mille, in bad health. The death-rate per mille of average strength was 29·0 among convicts, and 25·9 among under-trial prisoners.

Medical Committees were appointed during the year to enquire into the condition of the Chapra and Bogra Jails. The recommendations of the Committees have been generally approved by the Lieutenant-Governor, and are being given effect to.

Dr. Comins has written at some length on the transfer of sickly prisoners to the Hazaribagh and Bankura Jails and the satisfactory results obtained. The Lieutenant-Governor has read with pleasure the account given of the care and zeal with which Surgeon-Captain A. H. Nott has tended the large number of invalid prisoners transferred to his jail from other parts of the Province, and of the general efficiency of his management of the jail. At Bankura, too, the report shows that the system has worked effectively under the supervision of the Superintendent, Surgeon-Captain Green.

25. *Jails with the highest mortality.*—The following table shows the jails in which the highest mortality among convicts occurred :—

	Death-rates from all causes per mille.		Death-rates exclusive of cholera per mille.	
	1896.	1895.	1896.	1895.
1	2	3	4	5
Daltonganj	108·0	51·5	108·0	51·5
Darbhanga	106·4	28·8	25·7	22·1
Dinajpur	99·4	147·8	99·4	54·5
Baranout	96·8	77·0	96·8	77·6
Bankipur	87·3	22·6	39·6	18·0
Rangpur	78·1	63·8	78·1	47·0
Comilla	75·0	16·8	70·6	16·3
Jalpaiguri	69·4	40·3	69·4	40·3
Purnea	67·3	13·0	67·3	13·0
Malda	63·1	59·9	63·1	59·9
Chapra	53·7	105·7	53·7	105·7
Motihari	53·3	55·2	53·3	55·2
Budwan	51·4	54·7	30·9	54·7
Barisal	50·7	40·6	46·0	40·6
Pabna	44·3	38·5	44·3	38·5
Bankura	42·5	50·4	39·0	50·4
Ranchi	40·8	23·1	40·8	23·1
Sury	40·6	51·8	40·6	17·3
Chalchasa	38·7	136·6	38·7	126·6
Midnapore	34·5	31·5	34·5	21·5
Jessore	30·7	23·4	26·9	23·4
Mymensingh	30·3	25·3	30·3	22·1

The high mortality at Daltonganj, a miniature jail with a population of 56, is reported to be due to the bad state of health of the prisoners admitted, who had been exposed to privation, and were suffering severely from malarial cachexia. Four of the 8 deaths occurred within 20 days of admission to jail. The high death-rate at Darbhanga and Bankipore was due to the outbreaks of cholera already mentioned; that at Dinajpur to the wretched condition of health in which a great number of prisoners were admitted to jail. This is one of the

jails in which, on account of the bad state of health of the inhabitants, better food is given to the prisoners. Barasat is one of the most malarious subdivisions in Bengal, and prisoners confined there, as well as the warder-guard and residents, suffer much from fever.

Bhagalpur shows the very low death-rate of 7·5 per mille, which is, as Dr. Comins observes, a record for a jail holding over 1,200 prisoners. This result is partly attributable to the healthiness of the year in the Station; but the fact that in 1895 also the death-rate was so low as 9·2 per mille bears out the Inspector-General's view that the great care and attention which Dr. Buchanan gave to every detail of jail management and to individual prisoners showing any deviations from normal health has been perhaps the most potent cause in reducing sickness and mortality. His Honour also notices with satisfaction the improvement at Bogra, Muzaffarpur, Dacca, Monghyr, and Cuttack.

26. *Inspections*.—Mr. A. D. Larymore while officiating as Inspector-General visited 2 central, 21 district and 10 subsidiary jails. Dr. Comins inspected 6 central and 16 district jails, and also visited several of the largest prisons in the North-West Provinces, in accordance with the recommendations of the Jail Committee of 1889. The number of visits paid by all classes of official visitors was 2,207 against 2,323 in 1895. Sir Alexander Mackenzie is gratified to observe that the number of visits paid by non-official visitors has risen from 97 in 1895 to 361, and His Honour trusts that these gentlemen will continue to take an interest in the working of the jails. The Inspector-General remarks that their opinions are frequently valuable.

27. *Officers of the Department*.—Among the Medical Officers specially commended by the Inspector-General are—Dr. E. G. Russell at Dacca, Dr. J. Lewtas at Chittagong, Dr. R. Whitwell at Bankipore, Dr. Buchanan at Bhagalpur, Dr. Nott and his Civil Hospital Assistant, Babu Sarat Chandra Sen, at Hazaribagh, and Assistant Surgeon Durgananda Sen at Buxar. Among Superintendents, Mr. W. A. C. Beadon at Dacca and Mr. M. S. Emerson at Buxar are specially mentioned. The Inspector-General also acknowledges the good work done by Mr. G. A. Davis as Deputy Superintendent of the Buxar Jail, and the marked ability with which Babu Nauranga Marwari has carried on the duties of Deputy Superintendent during the absence of Mr. Davis on deputation as Officiating Superintendent of Jail manufactures.

The thanks of the Lieutenant-Governor are due to Dr. Comins for his efficient administration of the Department, and to Mr. A. D. Larymore for his good work both as Superintendent of the Alipore Central Jail and as Deputy Inspector-General and Officiating Inspector-General.

ORDER.—Ordered that a copy of this Resolution be forwarded to the Inspector-General of Jails, for information and guidance.

Ordered also that a copy of this Resolution, with a copy of the Report, be submitted to the Government of India in the Home Department.

Ordered also that this Resolution be published in the *Calcutta Gazette*.

By order of the Lieutenant-Governor of Bengal,

C. W. BOLTON,

Chief Secretary to the Govt. of Bengal.

WATER-SUPPLY.

No. 3001 L.S.-G.—The 1st June 1897.—The following reports of the progress made in the several districts of the Dacca and Rajshahi Divisions in collecting and placing on record the chief facts regarding water-supply are published for general information.

H. H. RISLEY,
Secy. to the Govt. of Bengal.

No. 477G., dated Dacca, the 16th May 1897.

From—G. TOYNBEE, Esq., Officiating Commissioner of the Dacca Division,
To—The Secretary to the Government of Bengal, Municipal Department.

With reference to your Circular No. 58L.S.-G., dated 12th December 1896, and in continuation of this office No. 1765G., dated 31st idem, and subsequent correspondence, I have the honour to submit in original the reports noted in the margin, received from the Magistrate of Mymensingh, Faridpur and Backergunge, on the progress made in their respective districts in collecting and placing on record the chief facts regarding water-supply and the steps taken by the Municipalities (except those of Faridpur district) and District Boards to improve the existing sources of water-supply and to open new ones during the period from January to March 1897.

2. The report from the district of Dacca and that from Faridpur, as regards the Municipalities in that district, will be submitted when received.

No. 16, dated Faridpur, the 5th April 1897.

From—J. H. TEMPLE, Esq., Chairman, District Board, Faridpur,
To—The Magistrate of Faridpur.

In pursuance of Bengal Government Circular No. 58, dated the 12th December 1896, and in continuation of this office letter No. 810, dated the 25th idem, about water-supply, I have the honour to submit the second quarterly report as follows:—

1. The Chairmen of the three Local Boards under this Board, have been asked to maintain the registers Nos. I and II as contemplated in Bengal Government Circular No. 8T.M., dated the 15th May 1896, but they have not been made complete for want of the full information for which you have been requested in this office letter No. 493, dated the 12th September 1896, to ask the panchayets to gather them. The statistics of some thanas have been received in this office and immediately sent to the respective Local Boards for the preparation of the said registers.

2. The District Board meeting held on 15th January 1897, sanctioned a scheme of water-works, in which excavation of tanks and re-excavation of tanks have been proposed and set apart Rs. 5,000 for it. Out of this amount Rs. 1,752-0-9 have been spent away up to 31st March 1897.

No. 338G., dated Faridpur, the 10th April 1897.

Memo. by—J. H. TEMPLE, Esq., Magistrate of Faridpur.

Copy forwarded to the Commissioner of Dacca in continuation of this office No. 22CG., dated the 5th February last. Urgent reminders have been issued for submission of the statistics which have not yet been received.

No. 385G., dated Barisal, the 30th April 1897.

From—N. D. BEATSON-BELL, Esq., Officiating Magistrate of Backergunge,
To—The Commissioner of the Dacca Division.

With reference to your No. 1685G., dated 16th December 1896, forwarding Bengal Government's Circular No. 58L.S.-G., of the 12th idem, I have the honour to report the progress made by the District Board and Municipalities in this district in the improvement of water-supply during the quarter ending 31st March 1897.

2. The water registers have been completely written up in the case of the Local Boards which have official Chairmen. In the other Local Boards (Sadar and Perejpur) I regret to report that the work is backward.

3. The following tanks were undertaken by the District Board during the quarter under report and earth-work of nine of them has been finished :—

Thana.	Name of work.	Remark.
Mendigunge	... { New tanks.	
	... { Kasipur.	
Amtali	... { Amtali.	
	... { Kaohupatra	
	... { Tikikátá	
	... { Mádartali	
Matbaria	... { Four tanks in Schillergunge	} Excavation finished.
	... { Ghatiohora	
	... { Patherghátá	
	... { Latimara	
Nalohiti	... { Haibatpur	
Golschipá	... { Khalishakhali	
	... { Dhaligaurnagar	} Work commenced.
Barhanuddi	... { Kumarkhali	
	... { Champta	
Backergunge	... { Tengraekhali	
Patuakhali	... { Srirampur	

3. In Barisal, Perojpur and Patuakhali* Municipalities the registers have been completely written up. The Chairman of Balohiti and Jhalokati Municipalities report that they have "opened" the registers, but do not say whether they are complete. I take it that they are complete.

4. In Barisal Municipality seven new tanks have been excavated and fifteen tanks re-excavated during the quarter. Seven tanks have been cleansed by their owners in Patuakhali Municipality. Jhalokati Municipality has finished the digging of a tank to be reserved for drinking purposes; four dirty tanks have been cleansed and five others described as "filthy" have been re-excavated by their owners on receipt of notices. Besides this, two channels have been deepened and widened in order to flush unwholesome tanks with water from the tidal river. Perojpur Municipality has re-excavated an old reserved tank. In Patuakhali Municipality seven private tanks have been re-excavated during the quarter, and notices have been served upon the owners of some other tanks to reserve them.

No. 811G., dated Mymensingh, the 12th May 1897.

From—E. B. HARRIS, Esq., Magistrate of Mymensingh,
To—The Commissioner of the Dacca Division.

WITH reference to your memorandum No. 1685G., dated 16th December 1896, forwarding copy of Government Circular No. 58L.S.-G., dated 12th idem, I have the honour to submit therewith copy of District Board Chairman's No. 231, dated 10th instant, reporting on the progress made by the District Board in collecting and placing on record the chief facts regarding water-supply and the steps that have been taken to improve existing sources of water-supply and to open new ones during the quarter ending 31st March 1897.

2. A statement showing the action taken by the Municipalities to improve water-supply is also herewith submitted.

3. The statement in Form I prescribed by Government Circular No. 8T.M., dated 15th May 1896, has now been received from all subdivisions, and is being checked and compiled in the District Board office.

No. 231, dated Mymensingh, the 10th May 1897.

From—E. B. HARRIS, Esq., Chairman, District Board, Mymensingh,
To—The Magistrate of Mymensingh.

WITH reference to Bengal Government, Municipal Department Local Self-Government Circular No. 58L.S.-G., dated the 12th December last, and your office memorandum No. 782G., dated the 5th instant, I have the honour to note below the progress made by this Board in collecting and placing on record the chief facts regarding water-supply and the steps that have been taken to improve existing sources of water-supply and to open new ones during the quarter ending 31st March 1897.

Form No. II prescribed in Government Circular No. 8T.M., which the Subdivisional Officers (or the thana Magistrates at Sadar) got filled up by the panchayets of the chaukidari unions are being copied and checked in the offices of Local Boards. Registers in Form No. I, prepared in the offices of the Local Boards on the basis of information contained in Form II furnished by the panchayets, have been received from all the Local Boards, excepting Tangail, and are being checked in the District Board office.

Column 4 of the registers in Form I for the four subdivisions which have been received in the District Board office, has been filled up from the Census Registers. I have sent reminders to Tangail Local Board to submit Form I to the District Board office without further delay.

Further enquiry is necessary for filling up column 20 of Form I. This is intended to be done gradually by inspecting officers, as they visit the villages in course of business. In the meantime the registers in Form I will be useful for reference in sanctioning grants for tanks.

2. The enclosed statement shows the number of tanks and wells, the construction or improvement of which was undertaken or in progress during the quarter under review.

3. The works shown in the statement are being done from the annual grant of Rs. 15,000 sanctioned by the District Board in its budget for 1896-97, excepting 11 tanks which are being excavated from the donation of Rs. 10,000 made by Rai Jogendra Kishore Ray Chaudhury Bahadur of Ramgopalpur on the occasion of the last visit of His Honour the Lieutenant-Governor to this district, and of Rs. 4,000 received through the same gentleman as donation from the property left by deceased lady, Zamindar Govinda Sundari Chaudhurani.

Statement showing the number of tanks and wells, the excavation or improvement of which was undertaken or in progress during the quarter ending 31st March 1897.

NAME OF SUBDIVISIONS.	1896-97.				REMARKS.
	New tanks excavated.	Old tank re-excavated or improved.	Wells excavated.	Wells improved.	
1	2	3	4	5	6
Sadar	10	5	3	Masonry wells. Six masonry wells and 13 earthen ring wells were being excavated during the quarter. Ten masonry wells, four curved tile wells and five earthen ring-wells.
Jamalpur	4	19	1	
Tangail	13	6	
Netrekona	4	9	Masonry wells.
Kishoregunge	5	3	2	
Total	23	17	37	7	

E. B. HARRIS,
Chairman.

Statement showing the steps taken by the Municipalities to improve water-supply.

Name of Municipality.	Steps taken by Municipal Commissioners to improve water-supply.
1	2
Nasirabad ...	Water pipes have been extended to Ram Babu's road. The Municipal Commissioners propose to sink a pucca masonry well in the village quarters, for which provision has been made in the budget. In compliance with the requisition of the Commissioners, a private tank was re-excavated by its owner. The Chairman promises to take steps to re-excavate or fill up other private tanks, the water of which is unwholesome.
Muktagacha ...	No new work has been done by the Municipality. The Municipal Commissioners have resolved to construct two ring-wells. Some tanks which were filled with aquatic plants, &c., have been cleared off by the owners thereof on the service of due notices on them.
Jamalpur ...	All the municipal tanks have been cleared off, and the Commissioners have resolved to re-excavate one of them and to construct eight ring-wells in the different parts of the town where scarcity of water is keenly felt; a sum of Rs. 500 has been allotted for the purpose.
Sherpur ...	One pucca masonry well has been constructed at a cost of Rs. 325, and one country ring-well has been sunk. All the public wells and good many private wells have been disinfected. Almost all the private tanks have been cleared off by the owners thereof at the requisition of the Municipal Commissioners.
Kishoregunge ...	No new work has been done by the Municipality. The Municipal Commissioners propose to re-excavate two tanks.
Bazitpur ...	No new works have been executed, but some of the tanks have been cleared off. Rs. 300 has been provided in the budget for improving water-supply.
Netrokona ...	No new works have been executed by the Municipality. The municipal tank which dried up during the summer season, has been re-excavated at a cost of Rs. 1,318. It has been set apart for drinking purposes. The Municipal Commissioners propose to sink two wells in those two villages where scarcity of water is felt.
Tangail ...	One masonry well was constructed, and the existing wells were duly cleared off.

E. B. HARRIS,
Magistrate.

No. 329Met., dated Darjeeling, the 21st May 1897.

From—P. NOLAN, Esq., Commissioner of the Rajshahi Division,
To—The Secretary to the Government of Bengal, Municipal Department.

In continuation of my letter No. 14Met.—R., dated the 1st January 1897,

1. Letter No. ⁷⁰⁶XVII—J., dated the 1st April 1897, from the Magistrate of Rangpur.
2. Letter No. 45J., dated the 9th April 1897, and enclosures, from the Magistrate of Bogra.
3. Letter No. 509J., dated the 20th April 1897, from the Magistrate of Dinajpur.
4. Letter No. 142J., dated 23rd April 1897, from the District Officer of Rajshahi.
5. Letter No. 624J., dated the 30th April 1897, and enclosure, from the Deputy Commissioner of Jalpaiguri.
6. Letter No. 296J., dated the 11th May, from the Deputy Commissioner of Darjeeling.
7. Letter No. 228J., dated the 11th May 1897, from the Magistrate of Pabna.

I have the honour to forward in original the reports specified in the margin of the progress made in the several districts of this division in collecting and placing on record the chief facts regarding water-supply, &c., during the quarter ending with the 31st of

March 1897.

No. ⁷⁰⁸~~xvii~~ J., dated Rangpur, the 1st April 1897.

From—E. GRAKE, Esq., Magistrate of Rangpur,
To—The Commissioner of the Rajshahi Division.

In continuation of my report No. 2951J., dated the 22nd December last, I have the honour to report that the District Board have during the quarter put down ten Norton's tube wells in the Kurigram subdivision, including two put down as a temporary measure at Jatrapur, to protect against cholera, consequent on the defilement of the river water by the railway passengers. One tube well only has been put down during this quarter at Gaibanda in village Idrakpur, and five tube wells have been sunk at the Sadar as a temporary measure for Board's coolies on work.

2. During the quarter three new masonry wells of 4 feet diameter—one at Sadar and two in the Gaibandha subdivision (one in the Nilphamari and two in the Kurigram subdivision)—are under construction. Also a number of old wells and the existing tube wells have been repaired according to requirement.

3. As regards the collection of statistics of the existing chief sources of water-supply in the district, forms with detailed instructions have been printed in the vernacular and have been sent to the village panchayats. Each panchayat is to supply the statistics of his village in that printed form. When all these forms have been received, the work of compiling the registers will be taken in hand.

4. No progress appears to have been made in the Municipality, and the cause of the delay in preparing the registers is not explained.

No. 45J., dated Bogra, the 9th April 1897.

From—U. C. BATAVYAL, Esq., Magistrate of Bogra,
To—The Commissioner of the Rajshahi Division.

In continuation of this office No. 874J., dated 22nd December 1896, on the subject of the quarterly reports of the progress made regarding water-supply, I have the honour to transmit copies of the documents noted on the margin, and to state that there is no scarcity of water in the district at present.

1. Copy of a letter No. 914, dated 22nd March 1897, from the Chairman, District Board.
2. Copy of a letter No. 192M., dated 31st March 1897, from the Chairman, Bogra Municipality.
3. Copy of a letter No. 2M., dated 1st April 1897, from the Chairman, Sherpur Municipality.

No. 914, dated Bogra, the 22nd March 1897.

Memo. by—U. C. BATAVYAL, Esq., Chairman of the District Board, Bogra.

Copy forwarded to the Magistrate of Bogra with reference to his letter No. 861J., dated 17th December 1896.

No. 484, dated Bogra, the 16th March 1897.

From—BARU N. K. CHAKRAVARTI, District Engineer, Bogra,
To—The Chairman of the District Board, Bogra.

WITH reference to your office memorandum No. 868 of the 12th instant on the subject of submission of quarterly reports of the progress made in collecting and placing on record the chief facts regarding water-supply, and steps that have been taken to improve the existing sources of water-supply during the present quarter, I have the honour to report as follows:—

A register has been opened in which every tank and well in each village containing 100 houses or more were being recorded; but as it is understood from Bengal Government Circular No. 234L.S.-G. that only sources of drinking water need be recorded in the register, arrangements are being made to revise the statements received and to correct the register accordingly.

The informations as much as have been collected regarding the sources of supply of water in the villages containing 100 houses or more in each thana are as under:—

Bogra thana.—Out of the 85 villages as recorded in the register, 23 are supplied from river or khal, 23 have wholesome tanks (private), and they are supplied from ordinary earthen wells. In certain villages there are a number of old tanks which have become useless, the water of them being unsuitable for drinking.

Khettal.—Out of the three villages, two are supplied from sufficient number of wholesome tanks (private), and as regards the third village (Bilgara), no information has yet been received, as the Police Sub-Inspector of the thana states that there is no village in that thana named Bilgara.

Shariakandi.—Out of the 39 villages, 22 are supplied from river or *bil*, and the rest from earthenware wells. There is only one tank in this thana, which was, it is said, excavated from famine work of 1880. One masonry well has been constructed at Fulbari this year by the District Board at the cost of about Rs. 540.

Sherpur.—Out of the 20 villages, including Dhunat outpost, only one village, namely, Panchthopi, is badly in need of a good supply of drinking water, and the villagers have to fetch water from a *bil* at a distance of about a mile. The rest of the villages are supplied from rivers or khals, and which are considered adequate.

Shibganj.—Out of the six villages, four are supplied from Korotoya river, and the supplies are quite adequate. The best one named *Sekendrabad* depends on tanks and wells, but all the tanks in the village (25 in number) are, it is said, unwholesome.

Panchbibi.—Out of 16 villages recorded, three are supplied from river and the rest are supplied from tanks and wells.

Adamdighi.—Out of the 20 villages recorded, two are supplied from river, and as regards the rest, informations are being collected. Earthen wells can be found in every house.

As regards the steps being taken to improve the existing sources of water-supply, nothing has been done during the quarter under report, except some additions had been made to the masonry well at Doobochanohia, at a cost of Rs. 102, and the platforms of the masonry wells at Durgapur, Jainagar, and Baniadighi are being constructed.

Further, the District Board has sanctioned the construction of a tank in the Dhunat out-post, but the estimate for the same has not yet been prepared. And also the Magistrate in his diary of a tour to Durgahata suggested that a pucca *indara* may be constructed there by the Board for the benefit of the public, and an estimate for the same well be prepared shortly.

No. 192M., dated Bogra, the 31st March 1897.

From—BABU BENI MADHUB CHAKI, Chairman of the Municipal Commissioners of Bogra,

To—The Magistrate of Bogra.

In compliance with your memorandum No. 862J., dated the 17th December 1896, I have the honour to inform you that during the present quarter orders have been passed and arrangements made for the construction of a new masonry well in the northern division of the town, which it is hoped will be completed during the next quarter; orders have also been passed to cleanse the existing wells.

No. 2M., dated Sherpur, the 1st April 1897.

From—BARU KALI KISHORE MUNSHI, Chairman, Sherpur Municipality,

To—The Magistrate of Bogra.

With reference to your office memorandum No. 862J. of the 17th December last, I have the honour to submit herewith an extract from the proceedings of a meeting of the Municipal Commissioners of Sherpur held on the 31st ultimo as required.

Extracts from the proceedings of a meeting of the Municipal Commissioners of Sherpur held on the 31st March 1897.

“As regards the water-supply of each ward of the Sherpur Municipality, the Municipal Commissioners are of opinion that the existing sources are adequate for the requirements of the town.”

No. 509J., dated Dinajpur, the 20th April 1897.

From—N BONHAM-CARTER, Esq., Magistrate of Dinajpur,

To—The Commissioner of the Rajshahi Division.

In compliance with Government Circular No. 58L.S.-G., dated 12th December 1896, forwarded with your No. 549M., dated 16th idem, calling for quarterly reports on the progress made in recording the facts relating to the water-supply in this district, I have the honour to report as follows.

2. The District Board report that during the quarter ending 31st March last materials for writing up the register of tanks, wells, &c., have been collected; but as the reports received relate to all villages, and not only to those of 100 houses and upwards, it is necessary to correct them before the register is written up. The Chairman has ordered that this be done by a reference to the census registers and the entries made without further delay.

3. There are 20 masonry wells in the possession of the District Board and two tube wells. Of the latter, one at Thakurgunon dispensary has not proved a success. Steps will be taken to have it repaired. The other tube well is under construction.

Of the 20 masonry wells, 3 are under construction. Most of the remaining 17 are reported by the District Engineer to be in need of repairs or of cleaning. Orders have been passed to submit an estimate for the work in each case.

4. The Chairman of the Dinajpur Municipality reports that there are in all 1,862 kutchha wells and 280 masonry wells within the Municipality. All these except 22 masonry wells belong to the private individuals residing in the town, and are largely used for drinking purposes, as the well water has been proved to be purer than either tank or river water.

There are also 82 tanks, all of which except three are reported to be quite unfit for drinking and other household purposes. The river Purnabhaha which runs to the west of the town also adds to the sources of water-supply. Those who live near it use its water for bathing and drinking purposes. At the commencement of last year the Municipality owned 20 masonry wells, all of which are said to have been thoroughly repaired during the

year before last. Two more masonry wells were constructed by the Municipality during the last year. There are five tanks belonging to the Municipality, but the water is used only for bathing and road-watering purposes.

5. The existing source of water-supply in the town as mentioned above is considered to be sufficient for the requirements of the people. But, judging from what I have seen of the town, the tanks are by no means in a clear or sanitary condition, and I have addressed the Municipal Chairman on the subject.

6. The Chairman reports that the materials for writing up the register of tanks, &c., have been collected, and the writing up of the registers will be taken in hand shortly.

No. 142J., dated Boalia, the 23rd April 1897.

From—N. K. BOSE, Esq., District Officer of Rajshahi,
To—The Commissioner of the Rajshahi Division.

I HAVE the honour to submit the following report of the progress made in collecting and placing on record the chief facts regarding water-supply and the steps taken by the District Board and Municipalities to improve the existing sources of water-supply and to open new ones for the quarter ending 31st March 1897.

2. *Preparation of Registers.*—The registers prescribed by paragraph 2 of Circular Nos. 7T.M. and 8T.M. have been prepared by the Municipalities of Boalia and Nator. The District Board of Rajshahi has prepared the registers for all the thanas excepting two or three. The registers for thana Mahadebpur and part of thana Adamdighi, recently transferred to this district, have not been taken in hand. The District Officers of Dinajpur and Bogra will be asked to send the registers of those thanas.

WATER-SUPPLY.

3. (a) *By the District Board.*—The District Board has during the quarter improved the reserved tanks at Biralidaha, Nator and Saipara. The excavation of masonry wells at Baneswar, Thakur Manda, Kanpura, and Damcoora was taken in hand during the quarter. The Baneswar well has been completed, while the others are in fair progress. Rani Monmohini Debya, of Putia, has, with her usual liberality and public spirit, paid the entire cost of the excavation of the Baneswar well (amounting to Rs. 1,066), and has dedicated it to public use, in commemoration of the visit of His Honour the Lieutenant-Governor of Bengal to this district in July last. Ten pottery wells have been dug in the Nator subdivision, and a tank in a village called Kandar is in course of excavation. Ten pottery wells are in course of construction in the Naogaon subdivision.

4. The District Board has during the quarter nearly completed the deepening of a drain called the Bairagir Dara, which, when completed, will allow free access of the flood-water of the Padma into the *bils* and tanks in the interior. Another drain has also been taken in hand. When these are completed, there will be an immense improvement in water-supply in localities through which the channels pass. These drains have been taken up at test relief works.

5. In addition to the above, the District Board has undertaken to re-excavate the following tanks belonging to private individuals with the money placed at its disposal by them:—

Locality.	Name of the proprietor.	Amount placed in the hands of the District Board.
1	2	3
Parila	Rani Monmohini Debya, of Putia ...	Rs. 500
Sibpur	„ Hemanta Kumari Debi, of Putia ...	500
Mohonpur	„ Sarnomoyee, of Putia ...	300
Rahimanpur	Srimati Jnanda Sundari, of Sitlai ...	200

The tanks at Parila and Sibpur are nearly completed, and steps are being taken to reserve them for drinking purposes with the consent of the proprietors. A large *dighi* at Bagha is being re-excavated as a test relief work. Its proprietor had offered to bear a considerable portion of the cost, but he has died suddenly, leaving a minor son as his heir. It is apprehended that the District Board shall have to bear the entire cost.

6. (b) *By the Boalia Municipality.*—Notices under section 200 of the Municipal Act for re-excavating or filling up unwholesome tanks have been served on the owners of almost

all filthy tanks in the town, and in compliance with the said requisitions, the following tanks are being re-excavated :—

- (a) Jnanda Sundari's tank in Miapara.
- (b) Kali Nath Saha's tank in Khansamarchak.
- (c) Dina Bandhu Sanyal's tank in Malopara.
- (d) Gadadhor Roy's tank in Beldarpara.
- (e) Krishna Chandra Roy's tank in Boulia.

Besides these, four gentlemen have of their own accord re-excavated their tanks situated in mahallas Shekhpura, Foodkipara and Kadirganj. The owners of a big tank near Rajshahi have authorised the Municipality to re-excavate it, and the work will be soon taken in hand. A well is being sunk by the Municipality in mahalla Raninagar at the cost of private gentlemen.

7. The Municipal Commissioners are rendering pecuniary help to those persons whose tanks, when re-excavated, are likely to prove useful, but who cannot afford the whole cost of the work. The water of the *Dames* below the town not being fit for drinking purposes, water from the flowing stream (which is now over a mile from the town) is being brought by boats and stored up in three depôts, from which it is being supplied to the public at a nominal cost. In order to make the water more easily obtainable, an iron tank filled with the Padma water is being sent round the town in a cart. A bamboo bridge has been erected over the *Dames* to enable the town people to bathe in and draw water from the main channel.

8. (c) *By the Nator Municipality*—There is nothing special to record. Two unwholesome tanks in wards Nos. 7 and 8 are being re-excavated.

9. During the quarter under report loans under the land Improvement Loans Act, amounting to Rs. 21,232, have been granted for the excavation and re-excavation of 124 tanks throughout the district.

No. 624I., dated Jalpaiguri, the 30th April 1897.

From—LIEUT.-COL. A. EVANS GORDON, Deputy Commissioner, Jalpaiguri,
To—The Commissioner of the Rajshahi Division.

REFERRING to Government Municipal Department Local Self-Government Circular No. 58L S.-G., dated 12th December 1896, forwarded with your Circular Memorandum No. 549M., dated 16th idem, calling for submission of quarterly reports of progress made in this district in collecting and placing on record the chief facts regarding water-supply, I have the honour to submit herewith copy of a letter No. 31M., dated 24th instant, from the Vice-Chairman, Jalpaiguri Municipality, stating the steps taken in improving the existing sources of water-supply and in opening new ones. The report of the District Board on the subject has not been received; they have, however, been written to, and as soon as it is received, it will be submitted to you.

No. 31M., dated Jalpaiguri, the 24th April 1897.

From—BARU TARINI PRASAD ROY, Vice-Chairman, Municipal Committee, Jalpaiguri,
To—The Deputy Commissioner, Jalpaiguri.

IN continuation of this office letter No. 297 of the 21st December 1896, I have the honour to state that the present sources of water-supply for the quarter ending 31st March 1897 are sufficient to meet the requirements of the people of this Municipality. The number of wells owned by the Municipality was seven, viz., four Ranigunge pipe wells and three masonry wells during the quarter. The platforms and copings to the said masonry wells were completed at a cost of Rs. 102 during the quarter. Construction of three more masonry wells was taken in hand during the latter part of the quarter, and the work has been finished in this month.

The Civil Medical Officer of the station has also taken steps to improve the quality of water of the public wells by disinfecting the water with permanganate of potash.

No. 296J., dated Darjeeling, the 11th May 1897.

From—R. T. GREEN, Esq., Deputy Commissioner, Darjeeling,
To—The Commissioner of the Rajshahi Division.

WITH reference to your Circular No. 660M., dated the 23rd January 1897, I have the honour to submit the following report regarding water-supply.

2. The supply of water in the hills is obtained from springs, there being no tanks, wells or khals.

3. The Darjeeling Municipality, as reported before, have arranged to filter the water-supply of the town through a Pasteur filter. The Deputy Commissioner has applied to Government for the service of an expert to report on the existing supply.

4. The town of Kurseong is supplied with water from permanent and wholesome springs. The supply of water is sufficient for the requirements of the town. The subject of further supply for the future requirement is under the consideration of the Municipal Commissioners.

5. There is no District Board in this district. The District Road Cess Committee have not found it necessary to take steps to improve the existing sources of water-supply.

No. 228J., dated Pabna, the 11th May 1897.

From—W. MAUDE, Esq., Magistrate of Pabna,
To—The Commissioner of the Rajshahi Division.

In continuation of this office letter No. 1567J., dated the 26th December 1896, I have the honour to submit the following report on the progress of recording and improving the water-supplies of this district for the quarter ending 31st March 1897.

2. Up to the end of the quarter the District Board have collected and recorded statistics regarding water-supply of 113 villages out of 658 shown in Register No. I. A 6-foot diameter masonry well in the village of Kumrul and three smaller such wells on roadsides were under construction in the Sirajganj subdivision during the quarter under report. There were no masonry wells in hand in the Sadar subdivision: 20 masonry wells of large and small diameter were cleaned and repaired. Rings were obtained for 150 wells for both the subdivisions, and the digging of the wells was started at the close of the quarter. The re-excavation of a large tank at Munsaidpur in Pabna subdivision was taken up as a famine relief work at the beginning of March.

3. By the Pabna Municipality two tanks near the kutchery compound have been re-excavated, the cost being met from the subscriptions raised for the reception of His Honour the Lieutenant-Governor of Bengal. Four more private tanks have been re-excavated in the Municipality at the cost of their owners. Three ring wells have been sunk by the Municipality at its own cost.

4. The Chairman of the Sirajganj Municipality reports that arrangements have been made to sink in various parts of the town 33 masonry wells, of which many have been commenced. Under notice from the Commissioners the owners of a private tank have commenced to clean it out. The clearing out of a municipal tank is reported to be under contemplation, provided the funds of the Municipality allow the Commissioners to do so. The Chairman also reports that several private gentlemen are sinking wells in their own premises with bricks sold to them by the Municipal Commissioners at a reduced price. The public will have access to a few of these wells.

STOCKS OF RICE IN AND AROUND CALCUTTA.

The 1st June 1897.

M. FINUCANE,
Secretary to the Government of Bengal.

STATISTICS OF THE SEA-BORNE TRAFFIC OF CALCUTTA IN FOOD-GRAINS:

No. 1340 Statistics.—The following memorandum and statements are published for general information.

STATISTICAL DEPARTMENT,
The 1st June 1897.

M. FINUCANE,
Secy. to the Govt. of Bengal.

Memorandum.

The sea-borne import and export traffic of Calcutta in food-grains during the week ending the 21st May 1896, and the corresponding period of 1897, is shown in the following statement:—

		15TH TO 21ST MAY			
		1896.		1897.	
1		2	3	4	5
		Cwts.	Mds.	Cwts.	Mds.
<i>Imports.</i>					
From Foreign Ports	4,296	5,847
„ Indian „	...	85,247	1,16,031	224,233	3,05,206
Total	...	85,247	1,16,031	228,529	3,11,053
<i>Exports.</i>					
To Foreign Ports	...	92,279	1,25,602	47,764	65,012
„ Indian „	...	59,644	81,182	15,086	20,534
Total	...	1,51,923	2,06,784	62,850	85,546

Imports.—The different staples comprising the import traffic are shown in the table below, and the figures for the week are compared with those for the corresponding period of last year:—

		15TH TO 21ST MAY			
		1896.		1897.	
1		2	3	4	5
		Cwts.	Mds.	Cwts.	Mds.
<i>Food-grains.</i>					
Rice	...	57,383	78,105	182,252	2,48,065
Paddy	...	21,613	29,418	34,252	46,621
Wheat
Gram and pulses	...	6,251	8,508	10,940	14,890
Other food-grains, such as jowar, barley, oats, &c.	1,085	1,477
Total	...	85,247	1,16,031	228,529	3,11,053

Imports.—The increase of 143,282 cwts. in the total imports into Calcutta was chiefly due to the receipt of 142,676 cwts. of rice and 29,101 cwts. of paddy from Burma, against nil in the corresponding week of 1896. There were on the other hand decreases of 23,704 cwts. and 20,843 cwts. under those articles respectively in the consignments from the Balasore ports.

Exports.—In the following statement the total quantity of each kind of food-grain exported by sea during the week ending 21st May 1897 is compared with the figures for the corresponding period of 1896:—

	15TH TO 21st MAY.			
	1896.		1897.	
1	2	3	4	5
<i>Food-grains.</i>	<i>Cwts.</i>	<i>Mds.</i>	<i>Cwts.</i>	<i>Mds.</i>
Rice	82,997	1,12,968	41,524	56,519
Paddy	22	30
Wheat	6,924	9,424	665	905
Gram and pulses	57,048	77,642	16,285	22,166
Other food-grains, such as jowar, barley, oats, &c.	4,959	6,750	4,354	5,926
Total ...	151,923	2,06,784	62,850	85,546

The total exports of food-grains to Foreign ports aggregated 47,764 cwts. and were only half those of the third week of May 1896, owing chiefly to a decline of 23,102 cwts. in the exports of rice to Ceylon and of 14,568 cwts. in gram and pulse exported to the United Kingdom.

The decrease in the exports of all kinds of cereals to Indian ports aggregated 44,558 cwts., of which 15,305 cwts. occurred in the shipments of rice and 9,841 cwts. in those of gram and pulse to Bombay, and of 12,766 cwts. of the latter to the Madras ports.

Detailed statements showing the sources of supply and the places of destination, both as regards Foreign and Indian ports, are given below:—

Statement No. I, showing the Imports of Food-grains into Calcutta from Foreign and Indian Ports during the week ending 21st May 1896 and 1897.

STATISTICS OF THE SEA-BORNE TRAFFIC OF THE MINOR PORTS
IN BENGAL IN FOOD-GRAINS.

No. 1355 Statistics.—The following memorandum and statements are published for general information.

STATISTICAL DEPT.,
The 1st June 1897.

M. FINUCANE,
Secy. to the Govt. of Bengal.

Memorandum.

THE comparative statements below give statistics of the import and export trade of the minor ports of Chittagong, Narayanganj, Balasore (including both Balasore and Chandbali), Cuttack and Puri during the 9 days ending 30th April 1897, as compared with the trade of the corresponding period of 1896 :—

IMPORTS.

Ports.			From Foreign ports.	From Indian ports.	Total.	
					Cwts.	Mds.
Chittagong	{ 1896	26	26	35
	{ 1897	41,251	44,251	60,230

Puri	{ 1896	...	4,849	4,849	6,600
	{ 1897
Total	{ 1896	...	4,849	74,510	79,359	108,016
	{ 1897	...	1,616	37,563	39,179	53,327

The enormous increase in the imports into Chittagong was due to larger receipts of rice and paddy from Burma. The increase of 1,583 cwts. in the imports into Balasore was mainly due to a supply of 1,265 cwts. of "other" food-grains from Calcutta, against nil in the corresponding period in 1896.

The export trade of Chittagong declined by 9,733 cwts., owing chiefly to the absence of shipments of rice and paddy to Cochin; to Narayanganj, however, the consignments increased by 5,070 cwts. The exports from Cuttack were only half those of the last 9 days of April 1896, in consequence of the cessation of supplies of gram and pulse, and to a falling off in the despatches of rice to the Madras ports. Owing to there being no exports of rice to Colombo, the trade of Puri showed a decrease. The exports from Balasore decreased by 23,407 cwts. The principal fluctuations were a falling off of 13,680 cwts. under rice and 11,436 cwts. under paddy, against an increase of 1,709 cwts. under gram and pulse.

Detailed statements showing the sources of supply and the places of destination, both as regards Foreign and Indian ports, are given below:—

Statement showing the quantities of Food-grains imported into Chittagong from each Foreign and Indian Port during the 9 days ending 30th April 1897, as compared with the trade of the corresponding period of 1896.

EXPORTS OF FOOD-GRAINS BY THE EAST INDIAN RAILWAY.

No. 1353 Statistics.—The following statement shows the quantity of rice and other food-grains exported by the East Indian Railway from Calcutta and Howrah during the period from 1st January to 22nd May 1897, both days inclusive, to have been 54,20,372 maunds. The destination of 52,27,380 maunds is specified. A little over two-fifths of this quantity (22,76,771 maunds) was carried to the North-Western Provinces and Oudh, about one-third (18,80,377 maunds) to stations in Bengal, about one-tenth (5,53,451 maunds) to the Central Provinces, and the rest (5,16,781 maunds) to other provinces. In the last week of the period, 64,145 maunds were exported to the North-Western Provinces and Oudh, and 1,58,393 maunds to Bihar.

M. FINUCANE,
Secy. to the Govt. of Bengal.

STATISTICAL DEPARTMENT,
The 1st June 1897.

Statement showing the quantities of rice and other food-grains exported from Howrah and Calcutta (Chitpur, Kidderpur Docks, and Port Trust Railway) by the East Indian Railway from 1st January to 22nd May 1897.

EXPORTS OF FOOD-GRAINS BY THE EASTERN BENGAL STATE RAILWAY.

No. 1354.—Statistics—The following statement shows the quantity of rice and other food-grains exported by the Eastern Bengal State Railway from Sealdah and Calcutta during the period from 1st January to 15th May 1897, both days inclusive, to have been 3,72,725 maunds. The destination of 3,70,948 maunds is specified. A little over three-fourths of this quantity (2,89,521 maunds) was carried to stations in Bengal Proper, and 12,998 maunds to Bihar and Chota Nagpur, about one-tenth (36,878 maunds) to the North-Western Provinces and Oudh, a little over one-thirteenth (29,226 maunds) to places in Assam and the rest (2,325 maunds) to other provinces.

M. FINUCANE,
Secretary to the Govt. of Bengal.

STATISTICAL DEPARTMENT,
The 1st June 1897.

Statement showing the quantities of rice and other food-grains exported from Sealdah and Calcutta (Port Trust Railway, Chitpur and Kidderpore Docks), by the Eastern Bengal State Railway, from 1st January to 15th May 1897.

WEATHER AND CROP REPORT.

For the week ending the 31st May 1897.

Burdwan.—Rainfall at Sadar 2·34, Kalna 1·07, Katwa 1·10, Raniganj ·25. Weather seasonable with frequent thunderstorms. Heavy rain at Raniganj on Saturday (29th May). Crop prospects excellent. Jute, *aus* and *aman* seedlings all doing well. Fodder sufficient. Water scarce in a few villages. Condition of cattle good. Common rice selling as follows:—

				Srs.	Srs.	
Sadar	8½	to 11	} per rupee.
Kalna	8	to 9	
Katwa	8½	to 9	

Birbhum.—Rainfall at Sadar ·95, Rampur Hât ·49. Weather hot, cloudy. Ploughing continues. Sugarcane being transplanted. Fodder sufficient. Price of common rice at Sadar 7½ seers and Rampur Hât 8½ to 10 seers per rupee.

Bankura.—Rainfall at Sadar 1·28, Vishnupur ·90, Gangajalghati ·84, Raipur 2·71, Khatra 1·48, Sonamukhi ·33, Kotalpur 1·98, Maliara 1·48, Indas ·60, Onda ·41. Weather hot and occasionally cloudy. Ploughing in full swing generally, and sowing of rice has begun. Fodder and water sufficient. Necessity for relief works in Simlapal and Chatna outposts probable soon. Famine wages calculated at 8 to 9½ seers per rupee. Price of common rice at Bankura 9 seers 10 chitaks, Vishnupur 10 seers, Sonamukhi 9½ seers, Gangajalghati 9 seers, Mejia and Simlapal 8½ seers, Raipur 8½ seers, Chatna 8½ seers and Saltora 8 seers 1 chitak. Numbers on relief—

	Men.	Women.	Children.	Total.
Test-workers	...	2,603	2,248	496
Otherwise relieved	...	811	1,770	940
			Total	...
				8,868

Relieved by Relief Committee 582.

Midnapore.—Rainfall at Sadar 1·21, Contai ·23, Tamluk 1·26, Ghatal ·94. Weather unsettled. Present rain proved beneficial to the cultivation of paddy. Ploughing and sowing going on. Prospect of *boro* and indigo not good. *Boro* in Dantun and Binpur is ripe and about to be harvested. Cattle-disease reported from Keshpur, Sabang, Dantun, Binpur, and Basudebpur. Fodder and water sufficient. Common rice selling as follows:—

				Srs.	
Sadar	10	} per rupee.
Contai	9 to 11	
Tamluk	9	
Ghatal	9 to 10	

Hooghly.—Rainfall at Sadar ·94, Serampore 1·10, Jahanabad 1·62. Rain doing good. Sowing of *aman* progressing. Weeding of *aus* and jute continues. Rice sells from 7 to 9½ seers per rupee.

Howrah.—Rainfall at Sadar 1·26, Ulubaria, 2·12. Weather cloudy with occasional rain and high wind. Sowing of jute and *aus* continues. Fodder and water sufficient. Common rice sells at 8 to 9 seers per rupee.

Singhbhum.—Rainfall at Chaibasa 2·59, Chakradharpur ·14, Ghatsilla 3·89. Rice plentiful. Price 7 to 12 seers per rupee.

General Summary.—There was general rain during the week, except in South Bihar and parts of Orissa. The present agricultural prospects continue favourable. Ploughing and sowing are proceeding everywhere, but more rain is required in parts. Early rice and jute have for the most part been sown and are coming on well. In parts of Tippera and Noakhali insects are said to be doing injury to the young *aus* plants. The sugarcane crop is good all round. The harvesting of *boro* or spring rice is almost over, and that of *china millet* is still going on. The price of rice is reported to be rising still in several districts. In the distressed districts the prices of the staple food-grain on which the famine wage is based are—Nadia (common rice) 7½ seers, Murshidabad (common rice) 8½ seers, Khulna (common rice) 9 seers, Rajshahi (common rice) 8 seers, Pabna (rice) 7 to 8½ seers, Shahabad (rice) 8 seers and (pea) 10½ seers, Saran (barley) 11 seers 11 chitaks, Champaran (common rice) 8 seers and (maize) 9 seers 13 chitaks, Muzaffarpur (*makai*) 9½ seers and (*rahar*) 12 seers, Darbhanga (common rice) 7½ seers and (*makai*) 9 seers, Bhagalpur (common rice) 8 to 8½ seers and (*marua*) 13 seers, Sonthal Parganas (rice at Jamtara) 7½ to 8 seers, Puri (common rice) 10 to 12 seers, Hazaribagh (rice) 6½ to 8 seers, Palamau (rice) 9 seers, Manbhum (common rice) 7½ to 8 seers.

The mean pressure of the seven days	Inches.	29.696
The average pressure of the corresponding period for 24 years, Surveyor-General's Office	29.609
The total number of hours of bright sunshine	Hours.	63.9
The maximum possible number of hours of sunshine	93.2
The mean temperature of the seven days	87.2
The average temperature of the corresponding period for 24 years, Surveyor-General's Office	86.7
The extreme variation of temperature	23.8
The maximum temperature	96.4
The highest velocity of the wind in one hour	Miles.	20
The mean relative humidity	76
The average relative humidity of the corresponding period for 24 years, Surveyor-General's Office	75
The total fall of rain from 23rd to 29th May 1897	Inches.	2.29
The average fall of the corresponding period for 24 years, Surveyor-General's Office	1.40
The total fall from 1st January to 29th May 1897	7.15
The average fall of the corresponding period for 24 years, Surveyor-General's Office	9.19
The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h., 10h., 16h and 22h.					
The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.					
The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.					
The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.					
The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.					
The mouth of the rain-gauge is one foot above the ground.					

o, overcast; g, gloomy; t, thunder; < lightning, p, passing temporary showers.

ADMINISTRATION REPORT OF THE BENGAL METEOROLOGICAL DEPARTMENT FOR 1896-97

The following report is published for general information.

By order of the Lieutenant-Governor of Bengal,

RIV. DEPT.,

The 8th June 18 7.

M. FINUCANE,

Secy to the Govt. of Bengal.

1. MR. PEDLER having vacated from 28th April 1896, I was appointed Meteorological Reporter to the Government of Bengal from that date and continued to be in charge of the Department till the end of the year.

2. By an arrangement made during the past year, the Meteorological Reporter to the Government of India has taken direct charge of the following observatories, and my connection with them is limited to the receipt of meteorological information, chiefly by telegram:—

OBSERVATORIES SITUATED IN—

Assam.	Burma.	Madras.	Sikkim.	Tibet
1	2	3	4	5
Dhubri Sibsagar Silchar Tura	Akyab Tavoy	Cooonada Cuddalore Gopalpur Nellore	Gantak	Yatung.

3. The number of observatories which were under my direct control and which submitted reports to the Bengal Meteorological office was 48 on the 31st March 1897. During the year, the troops which were at Gnatong were withdrawn, and the Civil Hospital Assistant, who was in charge of the Gnatong observatory having been ordered by the Political officer, Sikkim, to leave the station, there was no one left who could be entrusted with the duty of taking meteorological observations there. The observatory was closed from 13th November 1896. On the other hand, the Cooch Behar State having expressed a desire to establish a third class meteorological observatory at Cooch Behar, a full set of meteorological instruments was supplied. The observatory was started on the 20th February 1897.

4. The following table will show the names and distribution of the 48 observatories which are under the direct control of the Bengal Reporter:—

Second class observatories.	Third class observatories.		Voluntary observatories.
1	2		3
Berhampore	Arrah	Krishnagar	Cooch Behar.
Burdwan	Balasore	Malda	Daltonganj.
Chittagong	Bankura	Midnapore	Demagiri.
Cuttack	Barisal	Motihari	Lungleh.
Darbhanga	Blagapur	Muzaffarpur	Shortt's Island.
Darjeeling	Bogra	Mymensingh	
False Point	Buxar	Naya Dumka	
Hazaribagh	Chaibassa	Noakhali	
Narayanganj	Chapra	Pamban (in Madras)	
Patna	Comilla	Puri	
Saugor Island	Dehri	Purnea	
	Dinajpur	Rampur Boalia	
	Faridpur	Ranchi	
	Gaya	Raniganj	
	Jalpaiguri	Rangpur	
	Jessore	Sirajganj	

5. In addition to the 48 observatories shown in the foregoing table, observations were also received during the past year from the following observatories by order of the Meteorological Reporter to the Government of India:—

OBSERVATORIES SITUATED IN—				
Assam.	Bengal.	Ceylon.	Burma.	Madras.
1	2	3	4	5
Dhubri	Alipore	Colombo	Akyab	Coconada.
Sibsagar		Trincomallee	Bassein	Cuddalore.
Silchar			Diamond Island	Gopalpur.
			Moulmein	Masulipatam.
			Rangoon	Nellore.
			Tavoy	Negapatam.
				Madras.
				Vizagapatam.

6. As stated above, the observatories named in this table are not under the control of the Bengal Reporter. But weather telegrams were daily received from the stations named in columns 2, 3, 4 and 5 throughout the year and for a part of the year, viz., 1st May to 31st October, from the Assam stations named in column 1. Reports on post card forms were also received for the remainder of the year from the Assam stations.

7. Meteorological observations were, as usual, recorded at the observatory situated at the Meteorological Office, Chowringhee, at 10 A.M., daily, and were regularly published in the *Calcutta Gazette* every week throughout the year. Monthly abstracts were also published in the *Gazette*.

8. *Inspection of observatories.*—Twenty-one out of 48 observatories were visited during the past year. Chaibassa and Burdwan were visited twice. Hence altogether 23 visits of inspection were paid to the Bengal observatories as shown below. Generally speaking, the condition of the observatories inspected were satisfactory, with the exception of Arrah, Comilla, Jalpaiguri, and Rangpur, which were found not to be in the same good order as those in other parts of the province. In connection with Comilla it may be noted that the observatory had not been inspected during the past nine years, and the present observer had not the benefit of the advice and instruction which may be gained from a visit of inspection.

9. The following table shows the names of observatories that were visited and other particulars in connection therewith. As the publication of the daily report makes it impossible for me to leave Calcutta even for a day, Babu Jati Lal De was deputed to do the work of inspection. He inspected these observatories under my direct orders:—

Number.	Names of observatories inspected.	Date of inspection.	Condition of observatory at time of inspection.
1	2	3	4
1	Arrah ...	4th, 5th and 6th February ...	Unsatisfactory.
2	Bankipore ...	9th, 10th and 13th July ...	Satisfactory.
3	Bankura ...	11th, 12th and 13th June ..	Ditto.
4	Bhagalpur ...	15th and 16th July ...	Fairly satisfactory.
5	Bogra ...	2nd and 3rd March ...	Satisfactory.
6	Burdwan ...	9th to 12th September and 12th December.	Ditto.
7	Buxar ...	6th and 7th February ...	Ditto.
8	Chaibassa ...	22nd and 23rd June and 30th and 31st October.	Ditto.
9	Chapra ...	11th and 12th July ...	Ditto.
10	Chittagong ...	15th and 16th March ...	Ditto.
11	Comilla ...	18th and 19th March ...	Unsatisfactory.
12	Cooch Behar ...	19th to 22nd February ...	Observatory satisfactorily started.
13	Dinajpur ...	24th February ...	Satisfactory.
14	Gaya ...	5th to 8th July ...	Fairly satisfactory.
15	Hazaribagh ...	27th to 29th June ...	Satisfactory.
16	Jalpaiguri ...	23rd February ...	Fair.
17	Jessore ...	20th to 22nd January ...	Do.
18	Krishnagar ...	5th and 6th March ...	Satisfactory.
19	Rangpur ...	16th and 17th February ...	Fair.
20	Raniganj ...	9th and 10th June ...	Satisfactory.
21	Saugor Island ...	12th and 13th January ...	Most satisfactory.

10. The following is a very brief statement of the facts requiring notice in connection with certain observatories that were inspected:—

Arrah.—In January 1897 the observer at Arrah having taken leave, the meteorological work was left in the hands of the Officiating Sub-Post Master, who was found to be entirely ignorant of the duties with which he was entrusted. He had to be thoroughly trained by the Instructor.

Burdwan.—The chief object of the visit to Burdwan on the first occasion was to arrange for comparative observations being taken in the new and old sheds. This was necessary owing to the site of the old shed having been taken up for the extension of the Magistrate's Court. Everything was satisfactorily arranged, but the action of the District Engineer in urging the necessity of pulling down the old shed compelled me to discontinue the comparative observations after they were taken for only a few days, although it was afterwards reported to me that the old shed remained intact for months. The observatory was again visited by the Instructor on the 12th December 1896 to arrange with the District Engineer for the removal of the lime kilns which he had erected close to the new shed without any reference to me. They were removed some time after the visit.

Bhagalpur.—The shed required urgent repairs. These have since been executed.

Chaitanya.—Owing to want of a better situation, the barometer was allowed to remain in a dimly lighted corner of the Education Committee's office, and in consequence the observer had difficulty in reading the barometer correctly, more especially on cloudy days. On the second occasion of the Instructor's visit in October 1896, it was removed, with the permission of the Head-master of the Zilla School to an adjoining room and placed in the same level as in its previous position. The arrangement of light in this position is much better, and it appears that there has been a decided improvement in the observations submitted since that time.

Chittagong.—The primary object of the visit was to set up a Dine's pressure tube anemometer which was supplied by the Meteorological Reporter to the Government of India for experimental use at that observatory. Owing to there being no support for the wind vane of the instrument on the roof of the telegraph office building, the anemometer could not be brought into immediate use. But the method of its working was explained to the observer and instructions left for its erection, which has since been effected. At the instance of the Superintendent of Telegraphs, Arakan Division, anemograph observations at Chittagong were discontinued from 1st January 1897, and the observer's allowance was reduced to Rs. 23 a month.

Comilla.—The observatory was found to be in a very bad condition at the time of the inspection. The wind vane and wet bulb hygrometer were defective, and, from the general condition of the observatory, it could readily be inferred that the observer took very little interest in the work.

Jalpaiguri.—The chief cause of the unsatisfactory condition of this observatory is the frequent change of observers, resulting in the submission, at times, of most inaccurate observations. Such was the case in October last, when, after a change of observers, wrong barometric readings were recorded for some time. Another change took place before the inspection visit in February 1897, when it was found that the new observer required instructions in the correct reading of the barometer. He has since resigned his appointment, and the observatory at present is in charge of a thoroughly trained observer.

Jessore.—During the past winter months, the observations of the dry minimum thermometer were found to be of doubtful value. On an examination of the thermometer during the inspection, it was found to be defective, which explained to some extent the cause of the wrong readings. The observer also seemed not to pay as much attention to his meteorological duties as he used formerly to do.

Rangpur.—It was not in a very good condition at the time of the inspection. The work of the observatory was found to have been divided between two signallers acting as observer in alternate months. The result of this division of work was that neither of the observers looked after the observatory, which was much in want of supervision. Since then, Mr. Bowers, who is an old observer of the department, has been transferred to Rangpur and has taken over charge of the observatory from the signallers.

Saugor Island.—A Dine's pressure tube anemometer, supplied by the Meteorological Reporter to the Government of India for experimental use at Saugor Island, was erected by the Instructor when he visited this observatory. The barometer was not in good condition, and has since been replaced by a new instrument. The assistant observer, Mr. DeSouza, was examined by the instructor and found well up to his duties. He remarks:—

"Saugor Island is one of the most important stations in connection with the Bay of Bengal storm signal service, and it is satisfactory to note that there is at least one observer (Mr. DeSouza) at this station who is well acquainted with the meteorological work."

11. *Second Class observatories.*—Of the second class observatories that were not visited during the past year, *Berhampore, Cuttack, Darbhanga and Narayan-ganj* submitted accurate observations. Some of the thermometric observations reported from the *Darjeeling* observatory were of doubtful value, and the observer at *False Point* seemed to read the instruments with less care than his predecessors. *False Point* being one of the important stations in the Bay of Bengal storm signal service, it is highly desirable that both the Light-house keeper and his assistant should do their utmost to improve the character of the observations in future.

12. *Third Class observatories.*—All the third class observatories that were not visited during the past year submitted satisfactory observations, with the

exception of Barisal, Faridpur and Muzaffarpur, the observers at these three stations remaining as careless as ever.

13. *Voluntary observatories.*—As stated before, the Cooch Behar observatory was started on the 20th February 1897. The instruments were supplied by the Meteorological Department free of cost on condition that observations were supplied to this office. The Civil Surgeon's clerk, the newly appointed observer, was thoroughly trained by Babu Jati Lal De, who remained at Cooch Behar for some days at the time of opening the observatory.

Under the superintendence of the present Civil Medical Officer, Dr. Raj Mohan Banerji, the *Daltonganj* observatory has improved, and the observations submitted seem to be more satisfactory than was the case before.

Both *Demagiri* and *Lungleh* have continued to submit thermometric observations—taken at 10 A.M. and 4 P.M. at the former, and at 8 A.M. only at the latter station.

Meteorological work was continued at *Shortt's Island* throughout the year.

14. In connection with the second and third class meteorological observatories, it may be stated that by orders of the Government of India the observatory buildings were transferred to the charge of the Public Works Department from 1st April 1896, from which date the repairs to the sheds, &c., have been carried out by that department.

15. *Awards for storm and special observations.*—The following observers have received awards for storm or other special observations, such as hot wind and thunderstorm observations, which were recorded under the direction of the Meteorological Reporter to the Government of India at certain observatories during the past year:—

STATION.		Amount.	STATION.		Amount.
1		2	1		2
		Rs.			Rs.
Barisal	...	11	Jessore	...	2
Bhagalpur	...	3	Krishnagar	...	1
Burdwan	...	7	Mymensingh	...	3
Chapra	...	3	Narayanganj	...	6
Chittagong	...	2	Patna	...	18
False Point	...	1	Puri	...	4
Gaya	...	3	Saugor Island	...	11
Hazaribagh	...	28	Shortt's Island	...	60

16. *Work at, and inspection of, rain-gauge stations.*—The number of rain-gauge stations on the 31st March 1897 was 328. Three new stations, viz., Setabganj (in Dinajpur district) and Bhoreh and Darauli (in Saran) were started, and two stations, viz., Karmala (in Puri) and Gnatong, were closed during the past year.

17. The Government of Bengal have repeatedly drawn the attention of District Officers to the necessity of frequent inspection of rain-gauges, their last circular being No. 1 Agri., dated 6th January 1897. From inspection reports received in this office it appears that only 95 stations out of 328 were inspected during the past year, as against 101 out of 327 stations in 1895-96 and 120 out of 325 stations in 1894-95. Some of the stations were visited twice, or even oftener, during the year. In this way 133 visits of inspection were paid to the rain-gauge stations, the largest number being inspected by Dr. Crawford, Civil Surgeon of Monghyr, and Dr. Kelly, Civil Medical Officer of the Sonthal Parganas. The returns from the rainfall stations were submitted with greater accuracy and punctuality during the past year than in previous years. There have of course, been instances where the reverse has been the case, but they were fewer in number.

18. Owing to the weekly meteorological and rainfall table having been discontinued from 1st May, the daily rainfall report on C form was discontinued, and as a check on the weekly report monthly forms on post card were introduced.

19. *Departmental reports*.—The short annual report on the meteorology of Bengal in the year 1895, with two maps illustrating the actual and percentage rainfall, was prepared and submitted to the Government of Bengal on the 22nd July 1896 for incorporation in the Administration Report.

20. The report on the meteorology of Bengal for the monsoon season of 1896 was prepared and submitted to Government with the usual number of illustrative charts prepared by hand. It was submitted to the Government of Bengal on the 14th December 1896 and published in the *Calcutta Gazette* of the 16th December 1896.

21. In paragraph 36 of the Administration Report of last year, it was said that a scheme was submitted to the Government of Bengal suggesting the discontinuance of the publication of the weekly meteorological and rainfall tables in the *Calcutta Gazette*. Mr. Pedler's proposals received the sanction of Government, and, accordingly, the publication of the weekly report was discontinued from May 1896.

22. The monthly rainfall table of Bengal and the Meteorological table of Bengal and Assam continued to be published in the *Calcutta Gazette*, the 8 A.M. meteorological observations taken at the voluntary observatories at Shortt's Island and Lungleh being included in the table.

23. The charts showing the distribution of actual rainfall, the variation from the normal and the percentage rainfall in Bengal were prepared by hand during the monsoon season, viz., May to October 1896, and submitted to the Government of Bengal and the Sanitary Commissioner of Bengal.

24. On the 17th March 1896 Mr. Pedler addressed the Government of Bengal on the subject of issuing only one daily weather report during the monsoon period instead of two as has been the case since 1883. The Government of Bengal sanctioned the proposal of amalgamating the two weather reports, and a report dealing with the observations taken at 64 meteorological observatories, including those on the coast of the Bay of Bengal from Tavoy to Pamban, Trincomalee and *Colombo in Ceylon, Dhubri, Sibsagar and Silchar in Assam, and the inland stations of Bengal, was published from May to October 1896. During the remainder of the year, viz., April 1896 and November 1896 to March 1897, the Bay of Bengal weather report dealing only with the observations taken at 28 stations round the coast of the Bay of Bengal was issued. Both the reports were issued to the subscribers in Calcutta between 11 and 1 o'clock in the forenoon. The money collected from the subscribers to the report was paid into the Bank of Bengal to the credit of Government, the lithographic establishment being now paid by Government instead of from the money realized by the sale of the Bay of Bengal weather report, as had previously been the case.

25. The daily flag signal message to Saugor Island and the daily weather telegram to the Port authorities at Madras, Akyab, Rangoon, Negapatam and Coconada were continued throughout the year. This weather telegram was sent to the Port Officer, Chittagong, from 16th May to 15th November as usual.

26. The system of forwarding meteorological information from the pilot brigs at the Sandheads by flag hoists and that of forwarding a telegraphic summary of the weather experienced by commanders of the steamers of the British India Steam Navigation Company during their voyages from Madras to Rangoon, Calcutta to Rangoon, etc., have been continued.

27. The thanks of the department are due to the tea and indigo planters, to the Moravian missionaries at Pedong, and to Mr. Hobson of Yatung (in Tibet) who have kindly sent rainfall returns during the past year. The thanks of the department are due to the Surveyor-General, Ceylon, for sending meteorological observations taken at Colombo and Trincomalee for the daily weather report and to Messrs. Mackinnon, Mackenzie & Company, the agents of the British India Steam Navigation Company, for allowing the Commanders of their vessels to telegraph the summary of the weather experienced during their voyages.

28. The Astronomer, G. V. Juggarow observatory at Vizagapatam, and the Proof Officer, Balasore, were added to the list

Storm signals.

* Colombo was substituted for Galle since May 1896.

of officers who receive warning of storms in the Bay. Telegrams warning officers of expected heavy rainfall were sent to—

Superintending Engineer, Orissa Circle, Cuttack.

Executive Engineer, Cossye Division, Midnapore.

Ditto, Ditto, Jajepur Division, Akhoyapada.

Ditto, Ditto, Balasore Division, Balasore.

29. There has been no change in the system of working the storm signals.

30. The dates of the principal storms and barometric depressions occurring during the past year are given in the first of the two following tables, and the action taken in the matter of issuing storm warnings and hoisting storm signals is indicated in the second of these tables.

Table giving a brief statement of the storms which affected the Bay of Bengal coasts during the year 1896.

Number of storm.	Period of depression or storm.	Character of storm.	Coast affected.
1	2	3	4
1	June 17th to 19th ...	Cyclonic storm from the extreme south of the Bay advanced almost due northwards, till the centre was near Calcutta on the morning of the 19th, and after remaining stationary there for several hours it moved away to the west. As it led to the establishment of the monsoon current over the Bay heavy rain followed its advance, but it was confined to the south of the province, the high pressure in North Bengal being sufficient to check its influence extending in that direction.	Orissa and Bengal coasts.
2	June 28th to 29th ...	Barometric depression, which began to form in the north-east of the Bay and before changing its position attained to greater depth than is usual during the monsoon season. It moved west-north-west, passing over south-west Bengal and Chota Nagpur. The depression was much deeper than is usual at the end of June, the lowest reading observed being under 29 inches.	Orissa and Bengal coasts.
3	July 13th and 14th ...	Barometric depression formed off the coast of the Circars on the 13th. It was very shallow and of short duration, as on the 14th it had crossed the coast between Vizagapatam and Gopalpur, having caused no disturbance, except rather heavy rainfall on that part of the coast.	Circars and Ganjam coasts.
4	July 22nd and 23rd ...	Barometric depression, which became well-defined, with a considerable defect over the Sunderbans and the extreme north of the Bay on the 22nd. Stormy weather prevailed over the sea; but as the area of lowest pressure remained to the south of the province comparatively fine weather prevailed at inland stations, except in the south-west, where rain was falling in moderate amounts. On the 23rd the centre of the depression was near Balasore, and on the 24th it had passed out of the province.	Orissa and Bengal coasts.
5	July 26th and 27th ...	Cyclonic storm formed in the same place as the preceding depression. It immediately began to move towards the west, and at 8 A. M. of the 27th the centre was close to Saugor Island. This disturbance was the most severe experienced during the year, but the rainfall caused by it in Bengal was very slight owing to the low pressure which continued over the north of the Bay.	Orissa and Bengal coasts.
6	August 1st and 2nd ...	Barometric depression formed with its centre a little to the south or south-east of Saugor Island on the 1st. The centre of the disturbance moved rather slowly to the west, and was near Balasore on the 2nd. The stormy weather which the depression caused was confined largely to the west of the Bay. Heavy rain fell in the south of Orissa during the formation and passage of the disturbance, but only light showers were received in Lower Bengal, and very little in the northern districts.	Orissa and Ganjam coasts.
7	August 11th to 14th ...	Very shallow barometric depression formed in the north-west angle of the Bay off the coast of Orissa, where it developed slightly. The centre crossed the coast in a north-westerly direction between False Point and Balasore.	Orissa coast.

Number of storm.	Period of depression or storm.	Character of storm.	Coast affected.
1	2	3	4
8	September 14th to 18th	Shallow barometric depression formed over the north of the Bay and the Sunderbans and moved very slowly and followed an irregular path, first to the west into Chota Nagpur, and then to the north-east into North Bengal. The disturbance gave very nearly the amount of rainfall, normal, for September, to all parts of the province, except the western districts of Bihar.	Orissa and Bengal coasts.
9	November 9th to 14th ...	Barometric depression, which began in the south of the Bay on the 9th and crossed the extreme south of the Peninsula on the 14th. This disturbance appears to have followed a curved path up the Arabian Sea, and crossed the Bombay coast on the 20th or 21st. It then turned eastward and drifted slowly, becoming daily more diffused till it filled up some days later in Bengal.	South India and Coromandel coasts.
10	November 24th to 27th...	Barometric depression formed in the south-west of the Bay and moved slowly westward. The centre crossed the coast on the 27th near Cuddalore, and a burst of monsoon winds followed. This depression had no effect on conditions in the north of the Bay or in Bengal.	Coromandel coast.
11	December 8th to 12th ...	Barometric depression developed suddenly in the south-east of the Bay, causing strong winds as far north as Diamond Island. Though the depression showed signs of moving into the north of the Bay, it filled up quickly, leaving only squally weather over the south of the Bay.	Burma coast.
12	December 16th and 17th	Barometric depression of considerable depth formed in the extreme south of the Bay. Stormy weather prevailed over the south of the Bay, and the depression passed westward, followed by heavy rain.	South India and Coromandel coasts.

Table showing the action taken by the Bengal Meteorological Office in warning the coasts affected by the storms enumerated in the previous table.

* There has been some delay in the hoisting and lowering of the storm signals owing to interruption in the telegraphic line between Puri and Cuttack.
† In column 5 of the above table "Calcutta" indicates both the Port Officer Calcutta, and the Deputy Director, Indian Marine Government Dockyard, Kidderpore, Calcutta.

The various members of my office establishment have as in previous years worked satisfactorily under what are, no doubt, at times, trying circumstances. The early publication of the daily weather report requires their attendance at 8-30 A.M. on all days, not even excepting Sundays and gazetted holidays—an arrangement which has been somewhat more trying since the two reports have been amalgamated during the monsoon season.

M. FINUCANE,
Secretary to the Government of Bengal.

STATISTICAL DEPARTMENT,
The 8th June 1897.

STATISTICS OF THE SEA-BORNE TRAFFIC OF CALCUTTA IN FOOD-GRAINS.

No. 1419 Statistics.—The following memorandum and statements are published for general information.

STATISTICAL DEPARTMENT,
The 8th June 1897.

M. FINUCANE,
Secy. to the Govt. of Bengal.

Memorandum.

The sea-borne import and export traffic of Calcutta in food-grains during the 10 days from 22nd to 31st May 1896, and the corresponding period of 1897, is shown in the following statement:—

	22ND TO 31ST MAY			
	1896.		1897.	
1	2	3	4	5
<i>Imports.</i>	Cwts.	Mds.	Cwts.	Mds.
From Foreign Ports	3,436	4,677
„ Indian „ ...	16,838	22,918	312,550	4,25,415
Total ...	16,838	22,918	315,986	4,30,092
<i>Exports.</i>				
To Foreign Ports ...	118,322	1,61,049	76,243	1,03,775
„ Indian „ ...	29,950	40,765	13,806	18,791
Total ...	148,272	2,01,814	90,049	1,22,566

Imports.—The different staples comprising the import traffic are shown in the table below, and the figures for the week are compared with those for the corresponding period of last year:—

	22ND TO 31ST MAY			
	1896.		1897.	
1	2	3	4	5
<i>Food-grains.</i>	Cwts.	Mds.	Cwts.	Mds.
Rice ...	11,269	15,338	247,653	3,87,083
Paddy ...	5,164	7,029	63,707	86,712
Wheat
Gram and pulses ...	405	551	4,328	5,891
Other food-grains, such as jowar, barley, oats, &c.	298	406
Total ...	16,838	22,918	315,986	4,30,092

Imports.—There was an immense increase in the total imports into Calcutta, viz, 315,986 cwts., against 16,838 cwts. in the last 10 days of May 1896. The improvement was, as usual, due to large shipments of rice (221,767 cwts.) and paddy (60,520 cwts.) from Burma, against *nil* in the corresponding period in 1896. While the supplies of rice from Balasore declined by 6,021 cwts., those from Chandbali amounted to 15,282 cwts. against nothing in the last 10 days of May 1896.

Exports.—In the following statement the total quantity of each kind of food-grain exported by sea during the last 10 days of May 1897 is compared with the figures for the corresponding period of 1896 :—

1	22ND TO 31ST MAY.			
	1896.		1897.	
	2	3	4	5
	Cwts.	Mds.	Cwts.	Mds.
<i>Food-grains.</i>				
Rice	98,513	1,34,087	61,463	83,658
Paddy	2,500	3,403
Wheat	7,180	9,773	2,942	4,004
Gram and pulses	33,331	45,367	19,904	27,173
Other food-grains, such as jowar, barley, oats, &c.	6,748	9,184	5,680	7,731
Total ...	148,272	2,01,814	90,049	1,22,566

The exports of food-grains from Calcutta declined from 118,322 cwts. in the 10 days ending 31st May 1896 to 76,243 cwts. in the period under review.

Foreign Ports. The chief fluctuations were a decrease of 23,558 cwts. of rice to Ceylon, 22,160 cwts. to Natal, and 9,570 cwts. to the United Kingdom; on the other hand there was a shipment of 28,377 cwts. of rice to States in Arabia other than Muscat against *nil* in the last ten days of May 1896. The United Kingdom took no wheat during the 10 days ending 31st May 1897, against 7,006 cwts. in the corresponding period of 1896; the exports of gram and pulses to that country also fell off by 6,149 cwts.

The decrease of 16,144 cwts. in the exports of food-grains to Indian ports was chiefly due to the consignment of rice to Bombay having been only 499 cwts. against 13,017 cwts. in the last 10 days of May 1896.

Indian Ports. Detailed statements showing the sources of supply and the places of destination, both as regards Foreign and Indian ports, are given below :—

Statement No. I; showing the Imports of Food-grains into Calcutta from Foreign and Indian Ports from the 23rd to 31st May 1896 and 1897 (both days inclusive).

STATISTICS OF THE SEA-BORNE TRAFFIC OF THE MINOR PORTS IN BENGAL IN FOOD-GRAINS.

No. 1416 Statistics.—The following memorandum and statements are published for general information.

STATISTICAL DEPT.,
The 8th June 1897.

M. FINUCANE,
Secy. to the Govt. of Bengal.

Memorandum.

THE comparative statements below give statistics of the import and export trade of the minor ports of Chittagong, Narayanganj, Balasore (including both Balasore and Chandbali), Cuttack and Puri during the week ending 7th May 1897, as compared with the trade of the corresponding period of 1896 :—

IMPORTS.

Ports.			From Foreign ports.	From Indian ports.	Total.	
					Cwts.	Mds.
Chittagong ...	{ 1896	3,262	3,262	4,440

	{ 1897	1,357	1,357	1,846
Balasore ports...	{ 1896	39,028	39,028	53,122
	{ 1897	30,797	30,797	41,918
Cuttack ...	{ 1896	...	12,660	1,190	13,850	18,851
	{ 1897
Puri ...	{ 1896
	{ 1897	...	11,842	11,842	16,120
Total ...	{ 1896	...	12,660	40,997	53,657	73,033
	{ 1897	...	11,842	32,154	43,996	59,884

The import trade of Chittagong, which amounted to 18,161 cwts., showed a rise of 14,899 cwts. chiefly on account of larger receipts of rice and paddy from Burma. The trade of Narayanganj and Balasore also improved by 1,469 cwts. and 128 cwts. respectively.

Owing to the cessation of exports to both Indian and Foreign ports, the export trade of Chittagong and Cuttack declined by 735 cwts. and 13,850 cwts. respectively, while the falling off of 8,231 cwts. under Balasore is attributed to smaller despatches of paddy to Calcutta. The improvement of 1,313 cwts. and 11,842 cwts. under Narayanganj and Puri, respectively, was due to despatches of rice to Chittagong and Mauritius against *nil* in the previous year.

Detailed statements showing the sources of supply and the places of destination, both as regards Foreign and Indian ports, are given below:—

Statement showing the quantities of Food-grains imported into Chittagong from each Foreign and Indian Port during the week ending 7th May 1897, as compared with the trade of the corresponding period of 1896.

EXPORTS OF FOOD-GRAINS BY THE EAST INDIAN RAILWAY.

No. 1412 Statistics.—The following statement shows the quantity of rice and other food-grains exported by the East Indian Railway from Calcutta and Howrah during the period from 1st January to 29th May 1897, both days inclusive, to have been 57,15,158 maunds. The destination of 55,21,460 maunds is specified. A little over two-fifths of this quantity (23,31,886 maunds) was carried to the North-Western Provinces and Oudh, about one-third (20,26,193 maunds) to stations in Bengal, about one-ninth (6,35,819 maunds) to the Central Provinces, and the rest (5,27,562 maunds) to other provinces. In the last week of the period, 55,115 maunds were exported to the North-Western Provinces and Oudh, and 1,32,176 maunds to Bihar.

M. FINUCANE,
Secy. to the Govt. of Bengal

STATISTICAL DEPARTMENT,
The 7th June 1897.

SUPPLEMENT TO THE CALCUTTA GAZETTE, JUNE 9, 1897.

EXPORTS OF FOOD-GRAINS BY THE EASTERN BENGAL STATE RAILWAY.

No. 1413.—Statistics.—The following statement shows the quantity of rice and other food-grains exported by the Eastern Bengal State Railway from Sealdah and Calcutta during the period from 1st January to 22nd May 1897, both days inclusive, to have been 4,23,157 maunds. The destination of 4,21,060 maunds is specified. A little over three-fourths of this quantity (3,33,734 maunds) was carried to stations in Bengal Proper, and 18,368 maunds to Bihar and Chota Nagpur, about one-twelfth (37,263 maunds) to the North-Western Provinces and Oudh, a little over one-thirteenth (34,370 maunds) to places in Assam, and the rest (2,325 maunds) to other provinces.

M. FINUCANE,
Secretary to the Govt. of Bengal.

STATISTICAL DEPARTMENT,
The 7th June 1897.

Statement showing the quantities of rice and other food-grains exported from Sealdah and Calcutta (Port Trust Railway, Chitpur and Kidderpore Docks), by the Eastern Bengal State Railway, from 1st January to 22nd May 1897.

Singhbhum.—Rainfall 78 at Chaibasa, 123 at Chakradharpur, 140 at Ghatsilla. Rice plentiful. Price 8 to 12 seers per rupee.

General Summary.—There was rain in almost all districts during the week. More rain is required in several parts, but generally the present agricultural prospects are favourable. Ploughing and sowing are everywhere proceeding. Early rice and jute are for the most part sown, and the sowing of late rice is going on. Spring rice is almost all gathered in, and all oilseeds and millets are being harvested. Sugarcane and indigo are in good condition. The price of rice is still reported to be rising in places. In the distressed districts the prices of the staple food-grain on which the famine wage is based are—Bankura (common rice) 8 to 9½ seers, Nadia (common rice) 7½ seers, Murshidabad (common rice) 8½ seers, Khulna (common rice) 8½ seers, Rajshahi (common rice) 7½ seers, Pabna (rice) 7 to 8 seers, Shahabad (rice) 8 seers and (pota) 10½ seers, Saran (barley) 11 seers, Champaran 9½ seers, Muzaffarpur (barley) 11½ seers and (rahar) 11½ seers, Darbhanga (maka) 9 seers, Bhagalpur (common rice) 8 to 9 seers, Sonthal Parganas (rice) 7½ to 8 seers, Puri (common rice) 10 to 12 seers, Hazaribagh (rice) 6½ to 9 seers, Palamau (rice) 8 seers, Manbhum (common rice) 7½ seers.

M. FINUCANE,
Secretary to the Govt. of Bengal.

Abstract of the results of Meteorological Observations taken at the Alipore-Observatory in the month of May 1897.

	Inches.	Date.	Hour.
The mean pressure of the month	29.658		
The average pressure of May from 24 years' registers ...	29.658		
The highest pressure in the month	29.866	2nd	10
The lowest pressure in the month	29.507	6th	16
The range of pressure	0.359		
	Hours.		
The total number of hours of bright sunshine during the month	268.3		
The maximum possible number of hours of sunshine ...	408.3		
	°		
The mean temperature of the month	87.5		
The average temperature of May from 24 years' registers ...	86.1		
The highest temperature in the month	104.6	9th	
The lowest temperature in the month	70.2	30th	
The range of temperature during the month	34.4		
The mean daily range of temperature	16.6		
The greatest range of temperature in one day	21.8	30th	
	Per cent.		
The mean humidity of the month	74		
The average humidity of May from 24 years' registers ...	73		
	Inches.		
The mean vapour tension of the month	0.957		
The average vapour tension of May from 9 years' registers ...	0.933		
The mean cloud proportion of the month	4.69		
The average cloud proportion of May from 20 years' registers	4.52		
	Inches.		
The total rainfall of the month	3.78		
The total rainfall indicated by a Beckley's self-registering rain-gauge (mouth of the gauge about 52 feet above the ground)	3.57		
The average fall of May from 48 years' registers	5.40		
The greatest fall in 24 hours	1.65	28th	
	Days.		
The number of rainy days in the month	9		
The average number of rainy days in May from 24 years' registers	13		
	°		
The mean maximum equilibrium temperature of solar radiation during the month	152.1		
The mean difference of sun and air temperatures	56.5		
The greatest sun temperature	160.2	4th	
The greatest excess of sun over air temperature	65.7	3rd	
The mean temperature of the nocturnal radiation thermometer on woollen cloth	75.7		
The mean depression of the nocturnal radiation thermometer below the minimum air temperature at 4 feet above the ground	3.4		
The greatest depression of the nocturnal radiation thermometer below the minimum air temperature	6.4	4th	
	Miles.		
The mean movement of the wind per day	203.1		
The greatest movement of the wind in one day	360.0	18th	
The greatest movement of the wind in one hour	24.0	18th 1 to 2 P.M.	

The number of hours with winds from each of the 8 points—

N. 17, N.E. 21, E. 40, S.E. 99, S. 396, S.W. 146, W. 15, N.W. 9, Calm 1.

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of past years (at the Park Street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore .003 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about 0.5° higher; and, finally, the thermometer which furnished the record of temperature at the Surveyor-General's Office during 20 years and upwards is found to read 0.6 higher than the Kew standard thermometer, which is the standard of reference at the present Observatory.

J. H. CHILLMAN,

METEOROLOGICAL OFFICE, INDIA,
Calcutta, the 7th June 1897.

For Meteorological Reporter to the Govt of India.

Abstract of the Results of the Barometric and Thermometric Observations taken at 10 a.m. at the Meteorological Office, Chowringhee, in the month of May 1897.

The mean pressure at 10 a.m. during the month	Inches.	29.709	Date.	
The mean temperature at 10 a.m. during the month	°	91.8		
The highest temperature during the month	Inches.	105.4	9th.	
The lowest temperature during the month		71.5	30th.	
The absolute range of temperature during the month		33.9		
The mean daily range of temperature during the month		18.4		
The greatest range of temperature in one day during the month		24.0	4th.	
The mean 10 a.m. humidity during the month	%	68		
The mean 10 a.m. vapour tension during the month	Inches.	1.007		
The total rainfall of the month		4.58		
The greatest fall in 24 hours		1.68	28th.	
The number of rainy days in the month	Days.	8		

C. LITTLE,

Meteorological Reporter to the Govt. of Bengal.

METEOROLOGICAL OFFICE, BENGAL,

The 7th June 1897.

The mean pressure of the seven days	Inches.	29.608
The average pressure of the corresponding period for 24 years, Surveyor-General's Office	29.582
The total number of hours of bright sunshine	Hours.	60.7
The maximum possible number of hours of sunshine	93.7
The mean temperature of the seven days	86.4
The average temperature of the corresponding period for 24 years, Surveyor-General's Office	86.6
The extreme variation of temperature	24.4
The maximum temperature	94.6
The highest velocity of the wind in one hour	Miles.	16
The mean relative humidity	76
The average relative humidity of the corresponding period for 24 years, Surveyor-General's Office	76
The total fall of rain from 30th May to 5th June 1897	Inches.	2.04
The average fall of the corresponding period for 24 years, Surveyor-General's Office	1.58
The total fall from 1st January to 5th June 1897	9.19
The average fall of the corresponding period for 24 years, Surveyor-General's Office	10.77
The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h., 10h., 16h and 22h.					
The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.					
The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.					
The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.					
The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.					
The mouth of the rain-gauge is one foot above the ground.					

o, overcast; g, gloomy; d, drizzling rain; p, passing temporary showers, t, thunder < lightning, K thunderstorm.

EAST INDIAN RAILWAY.

EXPORTS OF FOOD-GRAINS BY THE EAST INDIAN RAILWAY.

No. 1487 Statistics.—The following statement shows the quantity of rice and other food-grains exported by the East Indian Railway from Calcutta and Howrah during the period from 1st January to 5th June 1897, both days inclusive, to have been 59,72,442 maunds. The destination of 57,76,786 maunds is specified. A little over two-fifths of this quantity (23,85,903 maunds) was carried to the North-Western Provinces and Oudh, more than one-third (21,33,006 maunds) to stations in Bengal, about one-eighth (7,16,984 maunds) to the Central Provinces, and the rest (5,40,893 maunds) to other provinces. In the last week of the period, 54,017 maunds were exported to the North-Western Provinces and Oudh, and 97,362 maunds to Bihar.

M. FINUCANE,
Secy. to the Govt. of Bengal.

STATISTICAL DEPARTMENT,
The 15th June 1897.

Statement showing the quantities of rice and other food-grains exported from Howrah and Calcutta (Chittpur, Kidderpur Docks, and Port Trust Railway) by the East Indian Railway from 1st January to 5th June 1897.

**EXPORTS OF FOOD-GRAINS BY THE EASTERN BENGAL STATE
RAILWAY.**

No. 1438.—Statistics.—The following statement shows the quantity of rice and other food-grains exported by the Eastern Bengal State Railway from Sealdah and Calcutta during the period from 1st January to 29th May 1897, both days inclusive, to have been 4,76,881 maunds. The destination of 4,74,102 maunds is specified. A little over three-fourths of this quantity (3,79,148 maunds) was carried to stations in Bengal Proper, and 14,018 maunds to Bihar and Chota Nagpur, about one-thirteenth (38,017 maunds) to the North-Western Provinces and Oudh, about one-twelfth (40,599 maunds) to places in Assam, and the rest (2,325 maunds) to other provinces.

M. FINUCANE,
Secretary to the Govt. of Bengal.

STATISTICAL DEPARTMENT,
The 15th June 1897.

STATISTICS OF THE SEA-BORNE TRAFFIC OF THE MINOR PORTS
IN BENGAL IN FOOD-GRAINS.

No. 1436 Statistics.—The following memorandum and statements are published for general information.

STATISTICAL DEPT.,
The 15th June 1897.

M. FINUCANE,
Secy. to the Govt. of Bengal.

Memorandum.

The comparative statements below give statistics of the import and export trade of the minor ports of Chittagong, Narayanganj, Balasore (including both Balasore and Chandbali), Cuttack and Puri during the week ending 14th May 1897, as compared with the trade of the corresponding period of 1896 :—

IMPORTS.

Ports.			From Foreign ports.	From Indian ports.	Total.	
					Cwts.	Mds.
Chittagong	...	{ 1896	1,323	1,323	1,801
	...	{ 1897	3,691	3,691	5,024
Narayanganj	...	{ 1896	735	735	1,000
	...	{ 1897
Balasore ports...	...	{ 1896	268	268	365
	...	{ 1897	300	300	408
Cuttack	...	{ 1896
	...	{ 1897
Puri	...	{ 1896
	...	{ 1897
Total	...	{ 1896	2,326	2,326	3,166
	...	{ 1897	3,991	3,991	5,432

EXPORTS.

Ports.			To Foreign ports.	To Indian ports.	Total.	
					Cwts.	Mds.
Chittagong	...	{ 1896	734	734	999
	...	{ 1897
Narayanganj	...	{ 1896	514	514	700
	...	{ 1897
Balasore ports...	...	{ 1896	49,280	49,280	67,075
	...	{ 1897	2,048	29,921	31,969	43,513
Cuttack	...	{ 1896
	...	{ 1897	50,556	50,556	68,812
Puri	...	{ 1896	10,506	10,506	14,300
	...	{ 1897
Total	...	{ 1896	10,506	50,528	61,034	83,074
	...	{ 1897	52,604	29,921	82,525	1,12,325

The improvement in the import trade of Chittagong was chiefly due to the receipts of 2,213 cwts. of rice from Burma and Madras, and of 423 cwts. of gram and pulse from Narayanganj against nil in the corresponding week of 1896.

Owing to the cessation of exports to both Foreign and Indian ports, the export trade of Chittagong, Narayanganj and Puri declined by 734 cwts., 514 cwts. and 10,506 cwts, respectively. Balasore also showed a falling off of 17,311 cwts., mainly on account of smaller shipments of rice and paddy to Calcutta, while the trade of Cuttack amounted to 50,556 cwts. against nil in the previous year.

Statement showing the quantities of Food-grains exported from Narayanganj to each Foreign and Indian Port during the week ending 14th May 1897, as compared with the trade of the corresponding period of 1896.

COMPARATIVE STATEMENT OF THE PRICES OF FOOD-GRAINS.

RETAIL prices of common rice and other food-grains in the several districts of Bengal and in the neighbouring districts of the North-Western Provinces during the first and second fortnights of April and May 1897, as compared with the corresponding fortnights of April and May 1896, are published for general information. The latest available prices of common rice in Cachar and Sylhet are also published.

M. FINUCANE,

Secy. to the Govt. of Bengal.

WEATHER AND CROP REPORT.

For the week ending Monday, the 14th June 1897.

Burdwan.—Rainfall at Raniganj ·15. Severe earthquake on Saturday afternoon; slight shock on Sunday midday; considerable damage done to buildings. Crop prospects excellent. Rain yesterday and today. Fodder and water sufficient. Common rice selling as follows:—

Sadar	Srs.	8½	to	11	} per rupee.
Kalna	8	to	9	
Katwa	8½	to	9	
Raniganj	8½	

Birbhum.—Rainfall at Sadar ·25, Rampur Hât ·70. Weather hot; cloudy. Sowing of paddy continues. Sugarcane doing well. Fodder sufficient. Price of rice at Sadar 7½ seers and Rampur Hât 8½ seers per rupee.

Bankura.—Rainfall at Raipur 3·40, Khatra ·80, Maliara ·13, Gangajalghati ·47. Weather seasonable. More rain wanted to facilitate cultivation. Rice coming up in places and prospects at present favourable. Sugarcane growing. No cattle-disease. Fodder and water sufficient. Scarcity in Ohhatna outpost proved by test-works. Common rice sells at Bankura 9½ seers and Vishnupur 10 seers per rupee. It is 8 to 9 seers per rupee at places near test-works. Numbers on relief—

	Men.	Women.	Children.	Total.
Test-workers	485	585	257	1,327
Otherwise relieved	1,147	2,334	1,402	4,883
Relieved from charitable funds	513	657	770	1,940
Total	...			8,150

Midnapore.—Rainfall at Sadar 1·05, Tamluk ·37, Ghatal ·31. Rains setting in. Prospects of indigo and sugarcane good. Sowing still continues. An earthquake on the 12th at 5 P.M. Fodder and water sufficient. Cattle-disease reported from Binpur, Dantun, Maisadal and Panchrole. Common rice selling as follows:—

Sadar	Srs.	9½	} per rupee.
Contai	9	
Tamluk	9½	
Ghatal	9½	

Hooghly.—Rainfall at Jahanabad ·56. Rain beneficial to standing crops. Sowing of *aman* progressing. Weeding of *aus* and jute continues. Rice sells at 7½ to 9½ seers per rupee.

Howrah.—Rainfall nil. Weather hot and cloudy. Sowing of *aus*, *aman* and jute going on. Prospects favourable so far. More rain is wanted. Fodder sufficient. Want of water felt in places in the Uluberia subdivision. Common rice sells at 8 to 9½ seers per rupee.

24-Parganas.—Rainfall at Sadar 1·02, Barasat ·03, Basirhat 1·47. Weather hot and cloudy with occasional showers. Prospects favourable, but more rain wanted in places. Weeding of *aus* and jute nearly over. No cattle-disease. Fodder and water adequate. Common rice sells as follows:—

Sadar	Srs.	7½ to 10	} per rupee.
Barasat	8	
Basirhat	8½	
Diamond Harbour	8	

Nadia.—A severe shock of earthquake throughout the district at about 5 P.M. on the 12th. Rainfall at Sadar ·24, Kushtia 1·32, Chuadanga ·15, Ranaghat ·13, Shikarpur 1·65, Nischindpur ·40. Prospects of standing crops fair. Water-supply improved. Fodder sufficient. Isolated cases of cattle-pox in thana Chuadanga. Common rice sells from 7½ to 9 seers per rupee. Numbers on relief on Saturday, 12th June 1897—

	Men.	Women.	Children.	Total.
Relief-workers	16,624	3,405	1,543	21,572
Dependents	516	23	10,559	11,098
Otherwise relieved	5,696	35,670	25,221	66,587
Total	...			99,257

Murshidabad.—Rainfall at Sadar ·77, Jangipur ·66. Weather hot. Sowing of *aman* continues. *Aus* and *bhadosi* plants doing well. State of indigo, mulberry, jute and sugarcane good. Fodder sufficient. A severe shock of earthquake at 5 p.m. on the 12th. Common rice sells as follows:—

				Srs.	
Sadar	8	} per rupee.
Kandi	9	
Jangipur	8½	

The latest price of common rice, where relief works are in progress, is 8 seers per rupee. Numbers on relief on Saturday, 12th June—

	Men.	Women.	Children.	Total.

Rajshahi.—Numbers on relief on Saturday, 12th June—

	Men.	Women.	Children.	Total.
Test-workers ...	434	Nil	Nil	434

Relief wages calculated on rice at 7½ seers per rupee.

Dacca.—Rainfall at Sadar ·39, Munshiganj ·97. Weather seasonable. Prospects of standing crops appear good. Fodder available. Cattle-disease is prevailing in the Munshiganj subdivision. Price of common rice 7 to 8 seers per rupee.

Mymensingh.—Rainfall at Sadar ·97, Netrokona 2·26, Kishorganj ·12, Tangail 1·09, Jamalpur 2·86. The monsoon appears to have commenced from the 12th instant. Prospects of *aus* and jute continue good. Price of common rice 7½ to 8 seers per rupee.

Faridpur.—Rainfall at Sadar 2·85, Goalundo 2·33, Madaripur 3·79. It would appear that early monsoon weather set in. Prospects fair. Rice still continues very dear, 7 to 8 seers per rupee.

Backergunge.—Rainfall at Sadar ·69. Weather cloudy. Prospects of crops fair. Common rice sells from 7 to 9 seers per rupee. Earthquakes on the 12th and 13th.

Tippera.—Rainfall at Sadar 4·59, Brahmanbaria 5·01, Chhandpur 2·59. Weather hot and cloudy with occasional showers. Standing crops good. No cattle-disease. Fodder sufficient. Price of common rice—

Comilla	8 4	} per rupee.
Brahmanbaria	8 10	
Chhandpur	8 14	

Noakhali.—Rainfall at Sadar 5·88, Feni 3·13. Prospects of *aus* crop good. No cattle-disease. Fodder and water almost sufficient except in South Hatia and Sundip. Common rice selling at 7 to 9 seers per rupee. Gratuitous relief is being given in Feni, Bamni and the seaboard tract to destitute poor.

Chittagong.—Rainfall 3·80. Weather hot and occasionally cloudy. A severe earthquake on 12th. Prospects of crops uncertain. More rain wanted. Fodder sufficient. Drinking water scarce in places. Rice selling at 8½ seers per rupee.

Patna.—Rainfall at Sadar 2·47, Bikram 1·84, Bihar 1·40, Dinapore 4·02. Standing crops benefited. Transplantation of *marua* and sowing of paddy and *makai* seeds will be pushed on. Dry fodder for cattle sufficient. Water scarce; supply improved by the rain. Severe earthquake on 12th. Cattle-disease in Patna; in Bihar it has abated. Prices slightly risen. Common rice selling at 8½ seers per rupee. Numbers on relief on Saturday, 12th June

Singhbhum.—Rainfall at Chaibassa 1·89, Chakradharpur 2·09, Ghatsilla 1·57. Rice plentiful, and price from 8 to 12 seers per rupee.

General Summary.—There has been rain all over the province during the week, and the agricultural prospects are generally reported to be favourable. More rain is said to be still required in parts, but the monsoon has apparently since set in. All standing crops are doing well, and the cultivation of the *bhadol* crops and winter rice is going on. The harvesting of *china* millet is still proceeding in Bihar. The fodder-supply continues to be sufficient, and the water-supply is now reported to have generally improved. Prices still show a slight tendency to rise in some districts. In the distressed districts the prices of the staple food-grain on which the famine wage is based are—Bankura (common rice) 8 to 9 seers, Nadia (common rice) 7½ seers, Murshidabad (common rice) 8 seers, Khulna (common rice) 8 seers, Rajshahi (common rice) 7½ seers, Shahabad (rice) 8 seers and (pea) 10½ seers, Saran (barley) 11 seers, Champaran (Burma rice) 8½ and 8½ seers and (pea) 11½ and 10½ seers, Muzaffarpur (*makai*) 9½ seers and (*rahar*) 11 seers, Darbhanga (common rice) 7½ seers and (*makai*) 9 seers, Bhagalpur (common rice) 8½ to 9 seers, Sonthal Parganas (common rice) 7½ to 8 seers, Puri (rice) 9 to 12 seers, Hazaribagh (rice) 6½ to 9 seers, Palamau (rice) 8 seers, Manbhum (common rice) 7½ seers.

RESOLUTION ON THE ANNUAL REPORT ON THE POLICE ADMINISTRATION OF THE TOWN OF CALCUTTA AND ITS SUBURBS FOR THE YEAR 1896.

No. 185J.D.

RESOLUTION.

POLICE.

Date: Darjeeling, the 19th June 1897.

READ—

The Annual Report on the Police Administration of the Town of Calcutta and its Suburbs for the year 1896.

Read also—

The Reports for the two previous years and the orders of Government recorded thereon.

Sir John Lambert, K.C.I.E., held the office of Commissioner of Police during the year, except for a short period of absence on privilege leave, when Mr. H. E. C. Paget, Deputy Commissioner, officiated for him.

2. The following table shows the total number of offences, cognizable by the Police and non-cognizable, reported in the Town of Calcutta and its Suburbs during the past ten years:—

	1897.	1898.	1899.	1900.	1901.	1902.	1903.	1904.	1905.	1906.
1	2	3	4	5	6	7	8	9	10	11
Town	47,787	51,663	50,287	48,878	48,500	47,765	36,503	41,812	45,201	51,855
Suburbs	7,335	12,000	10,086	13,069	11,871	11,474	11,242	15,014	18,580	15,044
Total	55,022	63,663	60,373	61,947	60,371	59,239	47,745	56,826	63,781	66,899

The total number of cases has gradually risen since 1893, and the figures for 1896 are the highest hitherto recorded. Compared with the totals for 1895, there has been an increase of 6,564 cases in the Town and 1,475 in the Suburbs, or 8,039 cases in all. The largest increase occurred in offences under the Municipal Act (3,547 cases), offences under the Police Act and miscellaneous offences in the streets; while the largest decrease was in offences under the Port Acts (226 cases) and Shipping Acts (201 cases).

The table below contrasts the figures for the past three years under cognizable and non-cognizable crime, and Penal Code and miscellaneous offences:—

1			2	3	4
			1894.	1895.	1896.
Cognizable	Penal Code	...	7,492	6,836	8,116
	Miscellaneous	...	23,316	24,392	26,714
Non-cognizable	Penal Code	...	6,277	6,760	6,608
	Miscellaneous	...	17,441	20,892	25,481
Total			54,526	58,880	66,919

3. The following statement shows separately the number of cognizable and non-cognizable cases and their results in the last two years, and also the division of work between the courts of the Town and Suburbs during the past year:—

COURT.	CASES INSTITUTED.			CASES TRIED.				NUMBER OF CASES ENDING IN CONVICTION.			
	Cognizable cases sent up by the Police.	Cognizable cases taken up by the Magistrate direct.	Non-cognizable cases.	Cognizable cases sent up by the Police.	Cognizable cases taken up by the Magistrate direct.	Non-cognizable cases.	Total.	Cognizable cases sent up by the Police.	Cognizable cases taken up by the Magistrate direct.	Non-cognizable cases.	Total.

								6,404 by Magistrate 13 by Sessions	28 by Magistrate 0 by Sessions	3,788 by Magistrate 0 by Sessions	9,216 by Magistrate 13 by Sessions.
Total for 1896	6,727	183	7,615	6,716	152	4,702	11,770	6,417	28	2,788	9,239
Total for 1895	6,366	100	6,844	6,273	78	3,240	9,637	6,129	11	1,806	8,036

The total number of cases tried in the Town and Suburbs during the year was 48,856, of which 38,877, or 79 per cent., ended in conviction. Of 31,210 cognizable cases sent up by the police, 28,082, or 89·9 per cent., ended in conviction, compared with 90·8 per cent. in 1895, and 93·4 per cent. in 1894; while of 1,811 cognizable cases taken up by the Magistrates direct, only 506, or 28 per cent., resulted in conviction. There was a large increase of 1,280 cognizable cases under the Penal Code, chiefly under thefts, hurt, house-breaking and rash act causing or likely to cause hurt. The total number of persons arrested under all heads in the Town and Suburbs in cognizable cases rose from 37,917 to 41,210. Of these, 37,296, or 90·5 per cent., were convicted, or about the same proportion as in 1895. In non-cognizable cases, 20,788 persons were arrested, against 16,791 in 1895, the percentage of convictions rising from 47 to 53.

4. *False cases.*—The number of false cases brought in the Town and Suburbs was 61 and 40, respectively, as compared with 64 and 27 in the previous year. The complainants were prosecuted under the Penal Code in 57 cases in the Town. In 13 cases they were fined, and in 23 discharged, and 20 cases were struck off in default of appearance. In the Suburbs 37 prosecutions were instituted, 9 cases ending in conviction and 14 in discharge, while 13 were struck off in default. Compensation was awarded to the extent of Rs. 96 in the Town and Rs. 64 in the Suburbs. Out of the 22 cases in which convictions were obtained, a sentence of imprisonment appears to have been inflicted in only one case.

5. *Property stolen and recovered.*—The total value of property stolen in the Town and Suburbs during the year was Rs. 2,97,675, against Rs. 1,75,596 in 1895; and of this, Rs. 1,92,398, or 64·63 per cent., were recovered, as compared with Rs. 1,01,014, or 57·52 per cent., recovered in the preceding year.

6. *Cognizable offences in the Town.*—The number of true cognizable cases reported in the Town rose from 24,476 to 27,363. An increase occurred under all classes, but chiefly under the heading of "Special and local laws," which shows a rise of 2,022 cases. The only marked decrease was in offences under the Port and Shipping Acts.

There were 11 cases of offences relating to coin, against 5 in 1895, all of an unimportant nature. Cases of murder fell from 9 to 2. There was one case of attempt at murder, against two in 1895. Three cases of culpable homicide were reported. None occurred in the previous year. Prosecutions for grievous hurt rose from 35 to 40; and of 37 persons tried, 25 were convicted and 12 acquitted. One case of administering drugs occurred, in which the accused were acquitted. Cases of kidnapping rose from 31 to 38, but only 14 persons were convicted. Three cases of robbery, the same number as in 1895, were reported, in two of which the accused were convicted and sentenced to terms of imprisonment and transportation. There was an increase of 51 cases of burglary and lurking house-trespass, while the percentage of cases detected and convictions obtained remained almost the same as in the previous year. The value of property stolen in these cases rose from Rs. 13,642 to Rs. 1,47,428. This large increase was chiefly due to a skilful burglary committed by a gang of men from Bombay and the Upper Provinces on the premises of a native merchant in Jora Bagan, in which property to the value of Rs. 93,895 was stolen. Thefts also show an increase in number from 1,571 in 1895 to 1,727; while the value of property stolen decreased from Rs. 1,41,654 to Rs. 1,24,357. The Commissioner of Police attributes the increase of burglary and theft cases to the scarcity and high prices especially during the latter half of the year, and the consequent influx of persons from Bihar and the Upper Provinces in search of employment. There were 476 cases of criminal breach of trust, against 453 in 1895 and 324 in 1894. Out of 343 persons brought to trial, 128 were convicted and 207 discharged. The police were particularly successful in prosecuting cases of theft of property by cart-drivers and broaching of cargo by boatmen, 35 out of 39 such cases having terminated in conviction. Of 3,321 prosecuted for street offences, 3,313, or 99 per cent., were convicted. Arrests for cruelty to animals numbered 6,890, of which 94·44 per cent. resulted in conviction, against 97·23 per cent. in 1895. Of the persons brought to trial, 4,848 were sent up by the agents of the Society for the Prevention of Cruelty to Animals, against 5,185 in the previous year.

7. *Non-cognizable offences in the Town.*—The number of non-cognizable offences reported true under the Penal Code and under special and local laws, respectively, were 4,539 and 19,934, as compared with 4,809 and 15,971 in 1895. The increase occurred chiefly in cases under the Municipal Act, and also in cases of cruelty to animals and under the Hackney Carriage Act. Of prosecutions under the Municipal Act, the increase was most noticeable in those under section 336 (keeping animals without a license), section 307 (keeping offensive matter for more than 24 hours other than in a proper receptacle), section 302 (allowing water from sink, &c., to flow on the street), and section 90 (exercising a trade or profession without a license). Forgery cases rose from 16 to 21, and extortion cases from 8 to 12; while cases of

cheating decreased from 272 to 242. In consequence of the supervision maintained over the fraudulent firms referred to in the Resolution of last year, their number decreased from 120 to 74.

8. *Cognizable offences in the Suburbs.*—The number of true cognizable cases in the Suburbs rose from 6,732 to 7,449, the increase being common to all classes, but largest in cases of minor offences against the person and property and under special and local laws. Ordinary thefts rose from 371 to 607, and cases of criminal breach of trust from 37 to 112. Four offences relating to coin were reported, against 6 in 1895, and 3 cases of murder against 4. In 18 cases of grievous hurt, and in 23 cases of hurt by dangerous weapons, convictions were obtained in 11 and 15 cases, respectively. Kidnapping cases rose from 7 in 1894 and 13 in 1895 to 19 during the past year. Out of 27 persons sent up only 6 were convicted. Two robberies were reported, but neither was of any importance. True cases of burglary and lurking house-trespass reported rose from 106 to 115, and the cases detected from 41 to 69. Of persons arrested 78 per cent. were convicted, against 82 per cent. in the preceding year. Thefts numbered 629, of which 300, or 47 per cent., were detected, as compared with 377 cases and 220, or 58 per cent., detected in 1895. The Commissioner of Police thinks that the increase of theft cases in the Northern Division may have been caused by the stoppage of work at some of the Mills. In the Southern Division it may have been due to a number of dock labourers being thrown out of employment.

9. *Non-cognizable crime in the Suburbs.*—The number of non-cognizable cases returned as true rose from 5,979 in 1894 and 6,842 in 1895 to 7,615 in 1896. There was an increase of 486 cases under the Hackney Carriage Act, of 85 under the Municipal Act, and of 105 assaults.

10. *Suicides and accidental deaths.*—Seventy-three cases of suicide were reported in the Town and Suburbs, as compared with an average of 78 in the five preceding years. Of these cases, 35 were committed by hanging and 23 by opium-poisoning. The number of accidental deaths has steadily decreased from 349 in 1893 to 186 during the past year. Twenty-one persons were run over by vehicles and killed, against 17 in 1895. Prosecutions were instituted against 130 persons for rash and furious driving, of whom 108 were convicted, against 251 prosecuted and 210 convicted in the previous year. Seventeen persons were drowned in the Port of Calcutta, against 37 in 1895 and 53 in 1894.

11. *Working of the Arms Act.*—The number of firearms of all descriptions held in stock by dealers at the commencement of the year was 2,538, and 2,765 pieces were imported and 1,415 pieces purchased in India by dealers, making a total of 6,718. Of this number, 643 were sold under transport licenses and 3,067 disposed of locally, leaving 3,008 pieces in stock at the close of the year. Five prosecutions were instituted under the Act, of which four ended in conviction.

12. *European Vagrancy Act.*—During the year 55 vagrants were admitted into the Government workhouse, of whom 54 were declared vagrants in Calcutta. These, with the 12 who remained in the workhouse at the close of the year, made a total of 67 vagrants, of whom 37 were discharged, 4 released, 5 deported from British India, 2 failed to return from leave, and 9 absconded. Sir John Lambert reports that discipline was well maintained in the workhouse, and that the conduct of the inmates throughout the year was, on the whole, good. The Almshouse gave refuge to 25 seamen during the year, all of whom were shipped through the exertions of Mr. McGuire, the Superintendent.

13. *Fire-Brigade Act.*—The fire-brigade was employed at 47 fires during 1896, as compared with 35 in 1895. At 19 others assistance was rendered by the manual engines. There were, besides, one hundred and sixty petty fires, at which the loss of property was trifling. At five of these the brigade was employed, the remaining 155 being extinguished by the manual engines. The most serious fire of the year occurred at Nalwapara, Garden Reach Road, where 9 lives were lost and 1,227 tiled and thatched huts were burnt, the damage done being estimated at Rs. 85,000. The total loss of property from fires during the year is calculated at Rs. 2,27,231, against Rs. 5,46,647 in 1895, although the actual number of fires was larger.

14. *The Police Force.*—The total sanctioned strength of the force was 2,924 officers and men, against 2,891 in 1895, the increase being chiefly due to the entertainment of 3 additional corporals and 24 constables for the better regulation of traffic in the Town. There were 257 casualties, or 8·88 per cent., as compared with 268, or 9·27 per cent., in 1895. Seven members of the force were punished judicially and 66 dismissed, against 13 and 65, respectively, in the previous year. Five deserted and 29 died. Admissions to hospital numbered 2,121, against 3,039 in the previous year. Departmental punishments increased during the year, the figures being 47 reduced, 70 suspended and 245 punished by extra drill, compared with 9 reduced, 39 suspended, and 229 punished with extra drill in 1895. A sum of Rs. 5,922-8 was disbursed in rewards, against Rs. 3,259-8 in 1895, of which Rs. 3,830 were paid by private individuals. In all, 172 members of the force and 62 informers received rewards.

15. *Old offenders and anthropometry.*—During the year, 728 released offenders were under police surveillance, of whom 371 were Bengalis and 357 up-country men. Six hundred and sixteen men whose antecedents were not known to the police were measured anthropometrically, and previous convictions proved against 69. Since the commencement of 1897, the system of identification by finger impressions has been introduced. Previous convictions were proved against 409 old offenders in the Town and against 111 in the Suburbs.

16. *Judicial work.*—Mr. Pearson held the office of Chief Presidency Magistrate except for one month, during which Nawab Syud Ameer Hossein, C.I.E., acted for him, being replaced by Mr. W. A. Bonnaud as Presidency Magistrate, Northern Division.

17. *Court of the Chief Presidency Magistrate.*—The total number of cases instituted in this Court was 13,289, against 11,716 in 1895. Of 14,416 persons concerned, 13,003 were convicted and 1,383 acquitted or discharged, 26 remaining under trial at the close of the year. The fines imposed aggregated Rs. 29,069, of which Rs. 22,624 were realised. Appeals were preferred against the order of the Court in 23 cases, but in one case only was the conviction set aside. Eleven cases were instituted under section 364 of Act II (B.C.) of 1888 for adulteration of food, in which nine persons were convicted and sentenced to fines varying from Rs. 20 to Rs. 100. Of 3,607 persons prosecuted for cruelty to animals, 3,203 were convicted. Adjournments took place in 255 cases, as compared with 215 in 1895.

18. *Northern Division Court.*—The total number of cases instituted during the year was 17,077, against 15,753 in the previous year, the increase occurring chiefly in street offences and offences under the Police Act. Of 18,529 persons brought to trial, 17,625 were convicted and 859 acquitted or discharged, and 16 remained under trial at the close of the year. Fifteen persons were committed to the Sessions, of whom 10 were convicted and 5 discharged. Of 3,509 persons prosecuted for cruelty to animals, 3,492, or 99·5 per cent., were convicted. The total amount of fines and forfeitures imposed during the year was Rs. 33,695, of which Rs. 28,601 were realised. In 27 cases 23 persons were tried under section 364 of Act II (B. C.) of 1888 for adulteration of food, all of whom were convicted. Appeals were preferred to the High Court in 60 cases, all being rejected. In 23 cases the High Court was moved, and the order objected to was set aside in 7 cases. Adjournments took place in 186 cases, against 150 in 1895.

19. The following statement compares the number of persons against whom process issued in non-cognizable cases with the number actually appearing during the past two years:—

NAME OF COURT,	Number of persons against whom process issued.		Number of persons actually appearing.		Percentage of persons appearing to persons against whom process issued.	
	1895.	1896.	1895.	1896.	1895.	1896.
1	2	3	4	5	6	7
Chief Presidency Magistrate	2,906	2,088	1,348	1,418	46·15	55·7
Presidency Magistrate, Northern Division	4,234	4,585	1,345	1,707	31·76	37·1
Honorary Presidency Magistrates	10,409	19,383	10,515	12,489	60·20	64·3
Total	22,155	26,056	12,913	15,614	58·31	57·9

There has been a slight improvement in this respect during the year, but still the percentage of persons appearing on persons against whom process issued is small. Mr. Pearson explains that this is principally due to the large number of cases withdrawn, compounded or abandoned by the complainants, but the fact that so many cases were not proceeded with would seem to indicate that process was often too readily issued.

20. *Work of Honorary Magistrates.*—Exclusive of municipal cases, 1,277 cases were transferred to the Bench Magistrates and 1,765 cases to Honorary Magistrates sitting singly; and 2 cases were taken up by the Honorary Magistrates *sun motu*, making a total of 3,044 cases, against 2,691 in 1895. Of these cases, 1,942 were under the Penal Code, 119 under the Code of Criminal Procedure, and 983 under local laws. Increased assistance was given by the Honorary Magistrates in the disposal of more important cases, and this should have afforded some relief to the Presidency Magistrates. Of 2,855 cases actually brought to trial, 1,653, or 57.9 per cent., resulted in conviction, and 1,202, or 42.1 per cent., in acquittal or discharge. In these cases 4,291 persons were concerned, of whom 53 per cent. were convicted and 47 per cent. acquitted or discharged, or the same proportion as in the previous year. The total amount of fines imposed was Rs. 8,450-5, against Rs. 7,363-10 in the previous year. Of the amount realised Rs. 977 were awarded to the complainants as compensation; while Rs. 123 were awarded to accused persons as compensation for frivolous or vexatious charges. Eleven appeals were preferred against the decisions of the Honorary Magistrates, and the High Court was moved in five cases, with the result that in two cases only were convictions set aside. The Honorary Magistrates tried 10,225 persons under the Municipal Act, of whom 5,073, or 49.6 per cent., were acquitted or discharged, and 5,152, or 50.4 per cent., convicted. The total amount of fines imposed in municipal cases was Rs. 25,795-12, of which Rs. 21,293-3-3 were realised, against Rs. 18,125-4 imposed and Rs. 14,648-7-6 realised in the previous year.

The large amount of work done by the Honorary Magistrates is clear from the foregoing figures, and the Lieutenant-Governor desires to acknowledge the very material assistance which is received from these gentlemen in the administration of criminal justice in Calcutta and its Suburbs. Mr. Pearson, while acknowledging the good service rendered by several gentlemen who, at some inconvenience to themselves, attended at a moment's notice to fill the place of an absentee, is again obliged to draw attention to the fact that some of the Magistrates fail to attend sittings of the bench without giving due notice, and that others attend late, thus causing inconvenience to the parties. The Lieutenant-Governor would be glad to see an improvement in this respect. The convenience of the parties should be consulted by the Honorary Magistrates to the fullest extent possible.

21. The Lieutenant-Governor's thanks are due to Mr. Pearson and Nawab Syud Amcer Hossein and those Honorary Magistrates who have been specially mentioned by the Chief Presidency Magistrate.

22. Sir Alexander Mackenzie takes the opportunity of placing on record his appreciation of the long and valuable services rendered by Sir John Lambert, who has unfortunately been compelled by ill-health to retire since the close of the year. Sir John Lambert first joined the service of Government as an Assistant Superintendent of Police in 1863. In July 1872 he was appointed to be Deputy Commissioner of Police, Calcutta, and that position he held until March 1882, when he was selected to act as General Superintendent of Operations for the suppression of Thagi and Dakaiti. In March 1884, he was re-appointed as Deputy Commissioner of Police, and from July 1885 officiated as Commissioner of Police and President of the Boiler Commission. When in April 1889 the Office of Commissioner of Police was separated from that of Chairman of the Corporation of Calcutta, he was confirmed as Commissioner of Police, and he retained the appointment continuously until his retirement last month. During his long connection with the city of Calcutta, extending over a period of some 25 years, Sir John Lambert acquired in a marked degree the confidence of the community as well as of the Government. His services have been repeatedly commended by this Government, and have been acknowledged by the Government of India. In 1882 the distinction of a Companionship of the

Indian Empire was conferred on him, and in 1893 he was created a Knight Commander of the Order.

22. The commendation bestowed on Mr. Paget, the Deputy Commissioner, and the subordinate officers mentioned in paragraph 38 of the Report, has been noted.

ORDER.—Ordered that a copy of this Resolution be forwarded to the Commissioner of Police, Calcutta, for information and for communication to the Presidency Magistrates.

Ordered that a copy of the Resolution be forwarded to the Commissioner of the Presidency Division, the Chairman of the Corporation of Calcutta, and the Municipal Department of this Government, for information.

Ordered also that a copy of the Resolution be published in the *Calcutta Gazette*.

By order of the Lieutenant-Governor of Bengal,

C. W. BOLTON,

Chief Secretary to the Govt. of Bengal.

LIBERALITY OF MR. TILUK DHARI DALL, A ZAMINDAR OF BHAGALPUR.

No. 856T.M., dated Darjeeling, the 14th June 1897.

From—H. H. RISLEY, Esq., C.I.E., Secy. to the Govt. of Bengal, Municipal Dept.,
To—The Commissioner of the Bhagalpur Division.

I AM directed to acknowledge the receipt of your letter No. 812J., dated the 29th May 1897, in which you report that Mr. Tiluk Dhari Lall, a zamindar of Bhagalpur, has established in the southern part of that town a charitable dispensary, which has been named "The Surdhari Lal Jubilee Charitable Dispensary," at a cost of Rs. 6,000, of which Rs. 5,000 has been spent in constructing a building for the dispensary and Rs. 1,000 on its equipments.

2. In reply, I am desired to request that you will be so good as to convey to the donor the thanks of the Lieutenant-Governor for his liberality and public spirit. His Honour trusts that the dispensary established by him will be suitably endowed and placed under Government supervision. This letter will be published in the *Calcutta Gazette*.

**DONATION OFFERED BY RAJA RAJENDRA NARAIN ROY CHOWDHURI
BAHADUR, OF BHAWAL, IN THE DISTRICT OF DACCA, TO COM-
MEMORATE THE SIXTIETH YEAR OF THE REIGN OF HER
GRACIOUS MAJESTY THE QUEEN-EMPRESS OF INDIA.**

MUNICIPAL DEPARTMENT—MUNICIPAL.

Darjeeling, the 17th June 1897.

RESOLUTION—No. 350T.—M.

READ—

A letter from the Commissioner of Dacca, No. 292G., dated the 28th April 1897.

Letter to the Commissioner of Dacca, No. 210T.—M., dated the 25th May 1897.

Letter from the Commissioner of Dacca, No. 498G., dated the 20th May 1897.

Letter to the Commissioner of Dacca, No. 287T.—M., dated the 4th June 1897.

Letter from the Commissioner of Dacca, No. 686G., dated the 7th June 1897.

In April last the Commissioner of the Dacca Division reported that Raja Rajendra Narain Roy Chowdhuri Bahadur, of Bhawal, in the district of Dacca, had offered to make a donation of Rs. 10,000 to commemorate the sixtieth year of the reign of Her Gracious Majesty the Queen-Empress of India. It was proposed that the money should be devoted either to the erection of (1) a suitable monument on the Buckland Bund in the town of Dacca, or (2) to pulling down the old club building and racquet-court which now stand on Government land in that town, and making an open square with an obelisk in the centre, with Her Majesty's bust embossed on it.

2. While the suggestion was under consideration, the Commissioner reported that Nawab Ahsanulla Bahadur, C.I.E., had also placed in his hands a sum of Rs. 12,000, and he has since explained that the Nawab's gift will be utilized in pulling down the club building and the racquet-court and opening on the site a fine square, enclosed with railings, to be named "Victoria Square," with an obelisk or a similar monument in the centre. The Raja's donation of Rs. 10,000 will be devoted to the erection of a monument to be placed on that part of the Buckland Bund which is to be called the Mackenzie Bund. The monument is to take the form of a granite or marble obelisk with a raised medallion portrait of Her Imperial Majesty.

3. The Lieutenant-Governor has much pleasure in accepting the donations of these gentlemen, and thanks them for their loyalty, liberality and public spirit.

ORDER.—Ordered that a copy of this Resolution be forwarded to the Commissioner of Dacca for information and communication to the Nawab Ahsanulla Bahadur, C.I.E., and Raja Rajendra Narain Roy Chowdhuri Bahadur, of Bhawal, and to the Board of Revenue.

Ordered also that the Resolution be published in the *Calcutta Gazette*.

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,

Secretary to the Government of Bengal.

WATER-SUPPLY.

No. 3228 L.S.-G.—The 18th June 1897.—The following report of the progress made in the several districts of the Dacca, Chota Nagpur and Presidency Divisions in collecting and placing on record the chief facts regarding water-supply are published for general information.

H. H. RISLEY,

Secretary to the Govt. of Bengal.

No 668G., dated Dacca, the 2nd June 1897.

Memo. by—G. TOYNBEE, Esq., Offg. Commissioner of the Dacca Division.

FORWARDED in original with enclosure to the Government of Bengal, Municipal Department, in continuation of this office No. 477, dated 18th May 1897.

No. 1551, dated Dacca, the 22nd May 1897.

From—L. P. SHIRREKS, Esq., Magistrate of Dacca,
To—The Commissioner of the Dacca Division.

With reference to the Government Circular No. 58 L.S.-G., of the 12th December 1896, I have the honour to submit the following report on the progress made in this district regarding water-supply for the quarter ending 31st March 1897.

2. The registers I and II prescribed in the Government letter above referred to have been prepared for the Sadar and Manikganj subdivisions and the respective Local Boards have been supplied with them. The Narainganj and Munshiganj registers are in course of preparation. The Narainganj Municipality has prepared those registers for that Municipality. The Dacca Municipality has not reported completion of its registers. The Chairman has been asked to report.

3. As regards the steps taken during the quarter in connection with water-supply, I beg to submit a copy of a letter received from the Vice-Chairman, District Board, on the subject, giving full particulars of the works executed and also those for which funds have been promised by certain gentlemen of the district.

4. In the Dacca Municipality there is no scarcity of water in any quarter of the town. About 16 miles of filtered water pipes have been laid out. Two house connections have been made during the quarter and four are in hand. The houses in the town have generally wells in them, but the well water is unfit for drinking purposes. This Municipality has asked for a loan of one and a-half lakhs of rupees from Government for supply of unfiltered water by a separate line of pipes for watering the streets and flushing drains, replacing the main pipes of the water-works by larger ones and doing other sanitary and conservancy improvements. In the Narainganj Municipality one municipal and four private tanks have been re-excavated during the quarter. The chief source of water-supply in this town, as was reported in the last quarter's report, is the river Lakhya and its khals and certain tanks. The supply is considered sufficient.

No. 126, dated Dacca, the 17th May 1897.

From—KHAJEM MAHOMED YOUSAFF, Vice-Chairman of the District Board, Dacca,
To—The Magistrate of Dacca.

In continuation of this office No. 112 of 7th instant, I have the honour to report that the works executed by the District Board of this district in connection with water-supply during the quarter ending 31st March last are as follows:—

Twenty-one tube wells were purchased at a cost of Rs. 2,064. Arrangements have been made for sinking them in places where there is want of good drinking water. Some of them have been lately put down at Kandail, Gopechar and Baktabali in the Narainganj subdivision. They are working well and supplying good water and have been much appreciated by the local men.

A sum of Rs. 244 was spent in the repairs of the tube wells sunk in the Munshiganj and Manikganj subdivisions and in the purchase of reducing sockets and buckets.

For improving the existing sources of water-supply Nawab Ashanullah Bahadur, C.I.E., has sanctioned Rs. 4,500 to meet the cost of excavating 4 tanks and 14 wells within his own zamindari in this district. These works are in progress and will be shortly completed.

Babu Ambika Prosad Ray Chaudhary, zamindar of Kasimpur, spent a sum of Rs. 1,300 in excavating two tanks at Mudhabpur and Simulia within his zamindari in this district.

Babu Rajendra Kumar Bosu, zamindar of Srinagar, excavated three tanks for the benefit of his tenants.

Rai Abhaya Charan Mitra Bahadur, zamindar and banker of Rajabari, has arranged for re-excavating the tank at Shirajabad near Munshiganj for the benefit of the local people.

Babus Janoki Nath Rai and Sita Nath Rai, of Bhagyakul, promised to pay Rs. 5,000 for the excavation of two tanks—one at Patabhog and the other at Brahmankhola in the

Munshiganj subdivision. They have no lands of their own, and have suggested that the lands required for the tanks may be acquired. Steps have been taken for the acquisition of the lands.

Raja Rajendra Narain Rai promised to spend Rs. 15,000 for improving old tanks and excavating new ones in the Bhowal pargana. During the quarter under review he has re-excavated many tanks within his samindari for the benefit of his tenants.

No. 87R.C., dated Ranchi, the 5th June 1897.

From—A. FORBES, Esq., C.S.I., Commissioner of the Chota Nagpur Division,
To—The Secretary to the Government of Bengal, Municipal Department.

WITH reference to Government Circular No. 58L.S.-G., dated 12th December 1896, I have the honour to submit the following report of the progress made in each district of this division in collecting and placing on record the chief facts regarding water-supply and the steps that have been taken by Municipalities and District Road Committees to improve existing sources of water-supply and to open new ones during the quarter ending 31st March 1897.

2. In Hazaribagh the Registers Nos. I and II have been opened and tested in almost all villages, and steps are being taken to improve the sources of water-supply as reported in the last quarterly return. During the quarter under review a sum of Rs. 2,384 has been spent by the Road Cess Committee in constructing three new wells and 47 new *daris* and Rs. 6 by the Chatra Municipality in cleansing an old well. Besides these 20 more *dari* wells have been taken in hand but not completed during the quarter. The Deputy Commissioner further reports that 46 more *dari* wells are urgently required in different thanas; but as all the available balance has been transferred to Provincial Revenue for relief works, they cannot be constructed this year from the District Road Fund. Raja Rameswar Nath Singh, of Kunda, has also signified his intention of spending Rs. 4,000 in constructing 9 wells, 29 *dari* wells and 6 tanks and in cleansing and deepening one well and a tank within his zamindari.

3. In Lohardaga a sum of Rs. 2,300 has been advanced to the zamindars for digging wells and tanks in the interior of the district under the Land Improvements Loans Act. A sum of Rs. 55 has been spent by the Road Cess Committee during the quarter for the improvement of a well at Jharia in the interior of the district. All the wells of the Ranchi Municipality that required cleansing have been cleansed and silt water drains around two wells have been constructed. The construction of a new well has also been taken in hand by the Municipal Commissioners during the quarter under review. In the Lohardaga Municipality a new tank near the Friday market is being excavated by the mahajans of the town and is near completion. The Registers Nos. I and II were tested by the Civil Surgeon and also by the Deputy Commissioner during his cold-weather tour. They were found defective and are now being revised. There is, the Deputy Commissioner reports, no fear whatever of any failure of drinking water in this district. Every village has one or more *daris* or natural springs which are perennial and afford a wholesome supply of water. In isolated cases *daris* run very low in the hot weather, and some delay and inconvenience is caused to the people in obtaining a sufficient supply, but this is not generally the case. There are also wells in nearly all large villages, but they cannot always be depended upon for a supply of water during the whole of the hot weather, as owing to the rocky nature of the soil it is difficult to make them of any very great depth. The people of this district prefer *dari* water, and do not usually use tank water for drinking purposes.

4. In Palamau during the quarter under review 40 out of 50 villages containing 100 or more houses (there are only 50 such villages in this district) have been visited and the chief facts regarding their water-supply recorded in Registers Nos. I and II. The Deputy Commissioner reports that the inspecting officers do not speak of any deficiency of water-supply in the villages visited by them, except in Bhandar, a village of Pattan thana, and in Nagorentteri, where they recommend repairs to a tank and the construction of a pucca well respectively. Owing to the prevailing scarcity relief works are in progress in nearly all parts of the district, and every advantage has been taken of this opportunity to improve existing tanks and to make new ones as also to repair old and construct new reservoirs both for purposes of irrigation and for increasing the

supply of water for both human being and cattle. A sum of Rs. 140 has been spent by the Daltonganj Municipality in deepening the bazar well, and the school well of the town has also been cleansed from the school fund.

5. In Manbhum the completion of the Registers Nos. I and II for the extra municipal portion of the district has nearly been completed. In the Raghunathpur Municipality a scheme for the extension of an existing tank has been proposed by the Municipal Commissioners, and is now under consideration. In Jhalda Register No. II has been completed. The present sources of water-supply of the Municipality being sufficient, no special steps are necessary. Nothing was done by the Purulia Municipality towards improving existing sources of water-supply or opening new ones during the quarter. Explanation will be called for.

6. In Singhbhum out of the Kolhan Improvement Fund of Rs. 4,000, Rs. 2,202 have been expended in constructing new *bundhs* and repairing old ones and Rs. 120 in repairing wells. The water from these works is used for drinking as well as for irrigation. The Road Cess Committee and Municipality have done nothing to improve the existing sources of water-supply or to open out new ones during the quarter under review. Explanation is being called for.

No. 33L.S.-G.—G., dated Calcutta, the 1st June 1897.

From—E. V. WESTMACOTT, Esq., Commissioner of the Presidency Division,
To—The Secretary to the Government of Bengal, Municipal Department.

IN continuation of my letters Nos. 133L.S.-G., dated the 21st January 1897, and 163L.S.-G., dated the 26th March 1897, submitting the first quarterly report of the progress made in each district of this division in collecting and placing on record the chief facts regarding water-supply and the steps that have been taken by local bodies to improve existing sources of water-supply and to open new ones, I have the honour to submit my second quarterly report as follows.

2. The Magistrate and Chairman of the District Board of Nadia reports that a sum of Rs. 1,500 has been paid through the local police for distribution for the construction of pot-wells.

3. The Chairman of the District Board of Jessore reports that the registers in the prescribed form have all been completed for the several subdivisions of the district and the sources of water-supply for every village containing one hundred houses or more have been recorded; that several wells have been sunk in villages where want of good water was felt on the reports received from the Subdivisional Officers and on the petition of villagers concerned; that the deepening of the tanks named in the margin* has been taken in hand; and that the excavation or re-excavation of several tanks, as noted on the margin†, is also in contemplation. He adds that in these projects efforts are made to obtain contributions from villagers and free gifts of land where possible. He further reports that the excavation of the Bhawanipur khal in the Jhenidah subdivision is in rapid progress and is being carried out by the subscriptions of zamindars and merchants with the help of funds from the District Board.

Magura Subdivision.

(1) Jespur tank.

4. The Chairman of the District Board of Khulna reports that he has not been able to complete his registers on account of not having received the necessary information from thana Mallahat and other places. He adds, however, that about Rs. 21,538 have been provided from the district funds for the improvement of water-supply during the current year, of which Rs. 9,654 is for excavating or re-excavating tanks, Rs. 3,000 for sinking wells, and the remainder has been provided under the head "Famine relief works" for making tanks with a view to give employment to labourers. It is also reported that more than 25 tanks are being excavated in the distressed tracts, and that the

sum of Rs. 3,000 provided for sinking wells been placed at the credit of the Local Boards.

5. The Chairmen of the District Boards of the 24-Parganas and Murshidabad have not yet submitted their second quarterly reports which on receipt will be forwarded.

6. As regards the steps taken by Municipalities, I enclose copies of the letters noted on the margin containing detailed particulars of each Municipality in the districts of the 24-Parganas, Nadia and Murshidabad. The Magistrates of Jessore and Khulna have not yet submitted their second quarterly reports, which will be submitted to Government when received.

(1) Letter No. 214M., dated 30th April 1897, from the Magistrate of the 24-Parganas.

(2) Letter No. 324J.M., dated 10th April 1897, from the Magistrate of Nadia.

(3) Letter No. 64M., dated 29th April 1897, from the Magistrate of Murshidabad.

No. 214M., dated Alipore, the 30th April 1897.

From—E. H. C. WALSH, Esq., Offg. Magistrate of the 24-Parganas,
To—The Commissioner of the Presidency Division.

I HAVE the honour to submit the second quarterly report as to the progress made in each of the Municipalities in this district in collecting and placing on record the chief facts concerning water-supply and the steps taken to extend or improve them.

2. As already reported, filtered water-pipes have been laid on in all the wards of the Cossipur-Chitpur Municipality and the supply of water is adequate.

Maniktolla.—Registers I and II have been revised; arrangements have been made for cleansing of those tanks in the wards where the system of filtered water-supply has not been extended and reserving them for drinking purposes.

Baranagore.—It appears that the Commissioners are arranging for re-excavation of a *dighi* and two tanks as a first step, and they have just submitted an application for a loan of Rs. 8,000 for the purpose. Several private tanks in the Municipality have been re-excavated or otherwise cleansed. Arrangements are also being made to carry water from the condensers of the Baranagore Jute Factories into private tanks in ward No. II. It is reported that respectable and well-to-do people are getting filtered water from Cossipur-Chitpur on payment of fees. Registers I and II have been completed.

Titagarh.—Registers I and II have been prepared and checked by the Commissioners. As stated in the last report the supply of drinking water is efficient and adequate.

Gurulia.—Registers I and II have been checked by the Ward Commissioners. The chief source of supply in Ward No. I is from the river Hooghly, which is not considered good. The attention of the Commissioners has been drawn to the necessity of providing and reserving a tank in these quarters.

South Barrackpore.—Registers I and II have been completed and checked by the Vice-Chairman and the Chairman. The supply of drinking water as already reported is from river Hooghly and private tanks and is considered sufficient. The Chairman has been requested to make suitable provision for good drinking water in the riparian wards which at present obtain a supply from the river Hooghly.

Goverdanga.—Registers I and II have been completed. The Commissioners have applied for a loan of Rs. 2,500 for excavation of tanks. A circular has been issued from this office to the jute cultivators warning them to prepare places for treatment of jute as they will not be allowed to steep jute in the river.

Baduria.—The Chairman reports that he does not apprehend any scarcity of water as he considers that the supply from the river Ichamati and a large number of tanks is adequate. Several of the latter have been cleansed during the quarter, and the Chairman is trying to induce the owners of some of them to reserve them for drinking purposes. The attention of the Chairman has been drawn to the desirability of acquiring some of the existing tanks and reserving them for drinking purposes. Registers I and II, as already reported, have been opened, but it is not stated whether they have been checked. It is reported that there are 35 wholesome tanks, of which 4 are in the two non-riparian wards and the rest are in the six wards which receive their chief supply from the river Ichamati.

South Dum-Dum.—In wards Nos. II and III the supply of drinking water is insufficient. In the former a tank has been acquired by the Municipality and is under re-excavation. The Commissioners promise to provide good drinking water for the residents of ward No. III during the present year. A joint-committee was formed between the representatives of the Municipality and Cantonment authorities, and they drew up a scheme for the supply of filtered water to the residents of the Municipality by means of hydrants placed on the cantonment main pipe which runs through the Municipality. The scheme has been submitted to Government through Commissioner for consideration.

North Dum-Dum.—Provision has been made in the budget of this Municipality for a loan of Rs. 2,000 for the re-excavation of five tanks in five wards of the Municipality. The application for the loan which was received in this office has been returned to the Chairman for revision.

Basirhat.—Registers I and II have been completed and checked by the Chairman. Notices have been issued by the Chairman under section 200 for cleansing of private tanks, and they are being complied with.

Barasat.—Four ring wells and two municipal tanks have been thoroughly cleansed; one additional tube well has been driven during the last quarter and four more are in course of being driven. Land has been acquired in the Kazipara ward of the Municipality, and a tank will shortly be re-excavated on this site. The Commissioners have submitted an application for a loan of Rs. 5,000 for further improvement of water-supply.

Rajpore.—Registers I and II have been prepared and checked by the Ward Commissioners. There are neither any reserved tanks nor any municipal tanks and wells. The entire supply is from private tanks. The Chairman has issued notices under section 200 for cleansing of tanks, and they are being complied with. The Commissioners submitted an application for a loan of Rs. 8,000 for excavation of five larger tanks in five wards of the Municipality. Estimates have been prepared for the work, and it is found that not more than Rs. 7,500 will be likely to be required for the purpose. The application for the loan has accordingly been returned to the Chairman for revision. The scheme for opening the Moragunga channel is still in the hands of the District Engineer, and it is probable that it will fall through in view of the difficulties that will have to be overcome before the work can be taken in hand. There are a large number of obstructions and encroachments the removal of which cannot be easily effected.

Baruipur.—The two useless municipal tanks have been sold, and the Commissioners propose to devote the sale-proceeds in re-excavation of a large private tank of the Chowdhury families, upon whom a notice under section 200 has been served and has not been complied with. A second notice has also been served under section 200 in respect of another tank the water of which is largely used for drinking purposes. The Commissioners have formed a sub-committee for taking lease of a tank which would be re-excavated and reserved or for selecting a site for acquisition and for excavation of a tank thereon. Provision has also been made in the budget for sinking two wells and cleansing the municipal tank No. I.

Naihatly.—The Commissioners are still undecided as regards the loan. The riparian wards as in the case of South Barrackpore Municipality require good tanks, and the Commissioners are being pressed to provide them by taking a loan, if necessary.

Joynagar.—A provision of Rs. 350 has been made in the budget for the acquisition and re-excavation of a tank which will be reserved. The present supply does not appear to be inadequate.

South Suburbs.—Registers I and II have been prepared. The principal sources of water-supply are from river and private tanks of which there are a good many. The Commissioners are arranging to supply filtered water in carts to the residents of the Municipality.

Garden Reach.—This Municipality has just been formed out of the South Suburban Municipality. Registers I and II have not yet been prepared, but it is understood that a large portion of this Municipality draws water from the hydrants of the Calcutta Municipality which adjoins it. The rest gets its supply from the river Hooghly and private tanks.

North Barrackpore.—Registers I and II are nearly completed. The river water is largely used for drinking purposes. The Commissioners have applied for a loan of Rs. 2,000 for excavation of tanks.

Taki.—Registers I and II have been prepared and checked by the Commissioner. Notices have been issued for cleansing of tanks. The Commissioners have settled as a first step to acquire and re-excavate a tank in the Saidpur village in which the supply of water is inadequate.

No. 324J.M., dated Krishnagar, the 10th April 1897.

From—J. H. E. GARRETT, Esq., Offg. Magistrate of Nadia,
To—The Commissioner of the Presidency Division.

IN continuation of this office No. 9J.M., dated the 6th January last, I have the honour to submit the following report showing the progress made in improving the existing sources of water-supply of each of the municipalities in this district for the quarter ending March 1897:—

1. **Santipur.**—The Chairman reports that no progress was made in improving the existing sources of water-supply.

2. **Kushtea.**—No fresh improvement has been made except that a tank is being re-excavated.

3. **Nadia.**—No new work has been undertaken since the date of the last quarterly statement.

4. **Meherpur.**—The municipal tank is under re-excavation. Four of the masonry wells have also been deepened.

5. **Ohakdah.**—Some pucks and kutcha wells were cleansed. Three ring wells are going to be sunk, and steps are being taken to cleanse the private tanks.

6. **Birnagar.**—The District Engineer has been requested to sink two masonry wells.

7. **Ranaghat.**—One tube well has been sunk in the office compound and some masonry wells have been disinfected.

8. **Kumarkhali.**—Nothing has been done during the quarter under report for the improvement of the existing sources of water-supply.

9. **Krishnagar.**—The Chairman reports that the re-excavation of one tank and construction of two masonry wells taken in hand during the quarter are in progress.

No. 64M., dated Berhampore, the 29th April 1897.

From—E. V. LEVINGE, Esq., Magistrate of Murshidabad,
To—The Commissioner of the Presidency Division.

WITH reference to your Circular No. 4L.S.-G.—G., dated the 13th instant, drawing attention to Government Circular Nos. 7T.M. and 8T.M., each dated the 15th May 1896, regarding the improvement of the existing sources of water-supply in the Municipalities and the District Board, I have the honour to state that, with the exception of Kandi, the four other municipalities in the district are favourably situated as regards the supply of drinking water, being on the sides of the river Bhagirathi. The people of the Kandi Municipality use occasionally the water of the river Mourakhi, but they are chiefly dependant on wells and tanks, especially during the dry season, for the supply of drinking water.

2. All the municipalities have prepared registers in the prescribed Forms I and II. The following progress reports have been submitted by the different Municipalities for the quarter ending the 31st March 1897:—

Berhampore.—The Chairman reports that the river Bhagirathi being the main source of water-supply to the town, it is quite adequate for the purpose. Messrs. Martin and Company's tender has been accepted for the construction of the Berhampore water-works, and it is hoped that the work will be completed early next year.

Kandi.—The Chairman reports that 48 notices were served on the owners under section 200 of the Municipal Act, ordering them to clean their tanks. In 45 cases the requisitions were complied with, and in three cases there were prosecutions, in which the defaulters were fined Rs. 10 each. With the exception of two or three large tanks in each ward, almost all the other tanks are dried up. The tanks still containing water and used for drinking purposes are said to be in good order. Three new wells have been sunk in places where water is specially required. Negotiations were going on with the owners of a few tanks with a view to reserve the tanks solely for drinking purposes, but nothing has been settled yet. A site for the excavation of a new tank has been selected by the Municipality. The Chairman says that if the owners of the land do not come to terms measures will be taken for acquiring it.

Azimganje.—The Chairman says that notices for the re-excavation of unwholesome tanks have been issued on the owners, and three of these have been allowed an extension of time to enable them to comply with the requisition. One pucca well belonging to the estate of the late Chandra Narain Sinha of Gosainbazar has been cleaned and repaired. At the cost of the Nawab Bahadur of Murshidabad the Municipality has cleansed and repaired a pucca well at Saidaganj Bazar belonging to the Nizamut and has also undertaken the construction of a pucca well in the same locality. Another pucca well has nearly been completed by the Municipal Commissioner Rai Setab Chand Nahar Bahadur. Besides these Babu Nanda Lal Roy, a coal merchant of Azimganj, is re-excavating a tank at Manullabazar at his own cost with a view to making it over to the Municipality for public use after its completion.

Jangipur.—This Municipality like Azimganj is situated on both sides of the river Bhagirathi, the water of which the people generally use for drinking purposes. The Chairman reports that no new tanks and wells were dug during the quarter under review.

Murshidabad.—The Chairman reports that the river Bhagirathi being the principal source of water-supply of this Municipality, four peons have been deputed to guard the several ghâts and see that the river water is not polluted by the washing of objectionable articles, &c. Water of tanks is seldom used for drinking purposes, and there is very little water in the tanks this year on account of the unusual drought.

A few tanks and wells have been repaired by the Municipality during the quarter. The water of the river is considered sufficient for drinking purposes.

3. A separate report will be submitted for the District Board as regards the steps taken to improve the existing sources of water-supply during the quarter.

STATISTICS OF THE SEA-BORNE TRAFFIC OF CALCUTTA IN FOOD-GRAINS.

No. 1445 Statistics.—The following memorandum and statements are published for general information.

STATISTICAL DEPARTMENT,
The 22nd June 1897.

M. FINUCANE,
Secy. to the Govt. of Bengal.

Memorandum.

The sea-borne import and export traffic of Calcutta in food-grains during the week ending 7th June 1896, and the corresponding period of 1897, is shown in the following statement:—

		1st to 7th JUNE			
		1896.		1897.	
1		2	3	4	5
<i>Imports.</i>		Owts.	Mds.	Owts.	Mds.
From Foreign Ports	2,674	3,639
„ Indian „	...	66,946	91,121	273,970	3,72,904
Total	...	66,946	91,121	276,644	3,76,543
<i>Exports.</i>					
To Foreign Ports	...	135,091	1,83,874	24,767	33,711
„ Indian „	...	42,123	57,834	15,455	21,036
Total	...	177,214	2,41,208	40,222	54,747

Imports.—The different staples comprising the import traffic are shown in the table below, and the figures for the week are compared with those for the corresponding week of last year:—

		1st to 7th JUNE			
		1896.		1897.	
1		2	3	4	5
<i>Food-grains.</i>		Owts.	Mds.	Owts.	Mds.
Rice	...	42,066	57,257	253,049	3,44,428
Paddy	...	22,116	30,102	22,291	30,340
Wheat
Gram and pulses	...	2,764	3,762	1,303	1,774
Other food-grains, such as jowar, barley, oats, &c.	1	1
Total	...	66,946	91,121	276,644	3,76,543

Imports.—The total imports into Calcutta amounted to 276,644 cwts. against 66,946 cwts. in the first week of June 1896, the increase being due to large consignments of rice (226,997 cwts.) and paddy (20,081 cwts.) from Burma. The receipts of these two cereals from the Balasore ports, however, declined by 18,687 cwts. and 20,345 cwts. respectively.

Exports.—In the following statement the total quantity of each kind of food-grain exported by sea during the week ending 7th June 1897 is compared with the figures for the corresponding period of 1896 :—

	1st TO 7th JUNE.			
	1896.		1897.	
1	2	3	4	5
	Owts.	Mds.	Owts.	Mds.
<i>Food-grains.</i>				
Rice	109,191	1,48,621	30,244	41,165
Paddy	1,682	2,289
Wheat	10,049	13,678	669	911
Gram and pulses	46,565	63,380	9,254	12,596
Other food-grains, such as jowar, barley, oats, &c.	9,727	13,240	55	75
Total ...	177,214	2,41,208	40,222	54,747

The decrease of 110,324 cwts. in the total exports of food-grains to Foreign ports was chiefly in rice, gram and pulse, and wheat, which showed a falling off of 72,560 cwts., 20,939 cwts. and 10,013 cwts., respectively. The shipments of rice to Ceylon, Réunion, and Aden were nil against 31,799 cwts., 20,123 cwts. and 6,171 cwts., respectively in the week ending 7th June 1896, while Mauritius took 18,581 cwts. less, and Muscat 8,601 cwts. more than in the 1st week of June 1896. The largest decline in the trade in gram and pulse occurred in the despatches to Mauritius (8,906 cwts.) and the United Kingdom (8,422 cwts.). The exports of wheat to the United Kingdom were nil against 10,010 cwts. in the 1st week of June 1896.

The exports of rice to Indian ports were half those of the week ending 7th June 1896, the decrease (6,387 cwts.) being almost entirely due to the supplies to Bombay having fallen from 12,385 cwts. to 6,270 cwts. The despatches of gram and pulse fell from 23,875 cwts. to 7,503 cwts. in the week under report, owing chiefly to there being no shipments to the Madras ports, which received 11,768 cwts. in the week ending 7th June 1896; the consignments to the Burma ports all declined by 2,936 cwts.

Detailed statements showing the sources of supply and the places of destination, both as regards Foreign and Indian ports, are given below :—

STATISTICS OF THE SEA-BORNE TRAFFIC OF THE MINOR PORTS IN BENGAL IN FOOD-GRAINS.

No. 1452 Statistics.—The following memorandum and statements are published for general information.

STATISTICAL DEPT.,
The 22nd June 1897.

M. FINUCANE,
Secy. to the Govt. of Bengal.

Memorandum.

THE comparative statements below give statistics of the import and export trade of the minor ports of Chittagong, Narayanganj, Balasore (including both Balasore and Chandbali), Cuttack and Puri during the week ending 21st May 1897, as compared with the trade of the corresponding period of 1896 :—

IMPORTS.

	{ 1897
Total ...	{ 1896	...	78,700	39,062	117,762	1,60,287
	{ 1897	...	8,310	26,378	34,688	47,214

The import trade of Chittagong, which amounted to 33,682 cwts., showed a rise of 33,472 cwts., chiefly on account of the receipts of rice from Burma. Narayanganj also received 4,702 cwts. of rice and paddy from Chittagong against nil in the corresponding week of 1896.

Owing to larger despatches of rice to Narayanganj the trade of Chittagong improved by 464 cwts., while the falling off of 7,838 cwts. in the case of Balasore is attributed to smaller shipments of rice, paddy and gram and pulse to Calcutta, although Mauritius received 4,950 cwts. of rice against nil in the previous year. Consequent on smaller despatches of rice to Foreign ports, the trade of Cuttack, too, declined by 75,340 cwts.

Detailed statements showing the sources of supply and the places of destination, both as regards Foreign and Indian ports, are given below:—

EXPORTS OF FOOD-GRAINS BY THE EAST INDIAN RAILWAY.

No. 1453 Statistics.—The following statement shows the quantity of rice and other food-grains exported by the East Indian Railway from Calcutta and Howrah during the period from 1st January to 12th June 1897, both days inclusive, to have been 62,54,767 maunds. The destination of 60,57,960 maunds is specified. A little over two-fifths of this quantity (24,62,401 maunds) was carried to the North-Western Provinces and Oudh, more than one-third (22,51,907 maunds) to stations in Bengal, about one-eighth (7,89,992 maunds) to the Central Provinces, and the rest (5,53,660 maunds) to other provinces. In the last week of the period, 76,498 maunds were exported to the North-Western Provinces and Oudh, and 1,14,097 maunds to Bihar.

M. FINUCANE,
Secy. to the Govt. of Bengal.

STATISTICAL DEPARTMENT,
The 22nd June 1897.
